FUND SUMMARY – STRATEGY SHARES NEWFOUND/RESOLVE ROBUST MOMENTUM ETF

Investment Objective: The Fund’s investment objective is to seek to provide investment returns that correspond, before fees and expenses, to the performance of the Newfound/ReSolve Robust Equity Momentum Index.

Fees and Expenses: This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee	0.49%
Distribution and/or Service Fee (12b-1) Fees	0.00%
Other Expenses	0.34%
<i>Interest Expense</i>	<i>0.01%</i>
<i>Remaining Other Expenses</i>	<i>0.33%</i>
Acquired Fund Fees and Expenses ⁽¹⁾	0.20%
Total Annual Operating Expenses	1.03%
Fee Waiver/Expense Reimbursement ⁽²⁾	(0.07)%
Total Annual Fund Operating Expenses After Fee Waiver/Expense Reimbursement⁽¹⁾⁽²⁾	0.96%

- (1) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The total annual fund operating expenses in this fee table will not correlate to the expense ratio in the Fund’s Financial Highlights because the financial statements include only the direct operating expenses incurred by the Fund, not the indirect costs of investing in other investment companies.
- (2) The Fund’s investment advisor, Rational Advisors, Inc., has contractually agreed to waive all or a portion of its management fee and/or reimburse certain operating expenses of the Fund to the extent necessary in order to limit the Total Annual Fund Operating Expenses (exclusive of: (i) acquired fund fees and expenses; (ii) brokerage commissions and trading costs; (iii) interest (including borrowing costs and overdraft charges); (iv) taxes; (v) short sale dividends and interest expenses; and (vi) non-routine or extraordinary expenses (such as litigation or reorganizational costs) to not more than 0.75% of the Fund’s daily net assets through August 31, 2024. This arrangement may only be terminated prior to this date with the agreement of the Fund’s Board of Trustees. Under certain conditions, the Advisor may recoup management fees that it waived or Fund expenses that it paid under this agreement for a period of up to three years from the date the fees were waived and/or expenses paid, provided such recoupment can be achieved without causing the expense ratio (after the recoupment is taken into account) to exceed (i) the expense limit in effect at the time the fees were waived or expenses paid, or (ii) the expense limit in place at the time of the recapture.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell or hold all of your shares at the end of those periods. This Example does not reflect the effect of brokerage commissions or other transaction costs you pay in connection with the purchase or sale of Fund shares. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same and the expense reduction/reimbursement remains in place for the contractual period only. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$98	\$321	\$562	\$1,253

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund

operating expenses or in the Example, affect the Fund's performance. During the fiscal year ended April 30, 2023, the Fund's portfolio turnover rate was 246% of the average value of its portfolio.

Principal Investment Strategy

The Fund employs a "passive management" (or indexing) investment approach designed to track the total return performance, before fees and expenses, of the Newfound/ReSolve Robust Equity Momentum Index (the "Index"). The Index is based on a proprietary methodology co-developed and co-owned by Newfound Research LLC and ReSolve Asset Management SEZC (Cayman) (the "Index Providers"). The Index is calculated and maintained by Solactive AG. The Fund will invest at least 80% of its assets in the component securities of the Index.

The Index uses a quantitative, rules-based methodology to provide exposure to broad U.S. equity, international equity, and emerging market equity indices, to the extent that such equity indices are exhibiting positive momentum relative to U.S. Treasury market indices. The Index generally consists of exchange-traded funds ("ETFs") that track regional equity indices, representative of U.S. equities, developed international equities and emerging market equities ("Regional Equity ETFs"), as well as ETFs that track U.S. Treasury market indices, representative of short-term (i.e., 1-2 year maturity) U.S. Treasury notes and intermediate-term (i.e., 7-10 year maturity) U.S. Treasury bonds ("U.S. Treasury ETFs"). The Regional Equity ETFs that may be included in the Index invest in the equity securities, including common stock and American Depository Receipts ("ADRs"), of companies of any market capitalization that are traded on foreign or U.S. exchanges. The Index typically includes between one and five ETFs. Because the Index is comprised of securities issued by other investment companies, the Fund operates as a "fund of funds."

The allocations to Regional Equity ETFs within the Index are determined by proprietary quantitative models that include momentum and trend following factors that are evaluated over various time horizons. The weightings of Regional Equity ETFs within the Index are determined based on measures of the momentum of the global equity markets relative to the momentum of U.S. Treasury securities. Regional Equity ETFs with the strongest momentum characteristics that also exhibit positive trend following characteristics receive greater weights. The Fund may have 100% portfolio exposure to U.S. Regional Equity ETFs or developed international Regional Equity ETFs, and up to 25% portfolio exposure in emerging market Regional Equity ETFs.

The Index will include U.S. Treasury ETFs when Regional Equity ETFs exhibit negative momentum and trend following characteristics versus the U.S. Treasury markets. The Fund may have 100% portfolio exposure to U.S. Treasury ETFs under such circumstances.

The Index is rebalanced weekly and is reconstituted annually in December.

The Fund generally will use a replication methodology, meaning it will seek to invest in all of the ETFs comprising the Index in proportion to the weightings in the Index. However, under various circumstances, the Fund may use a representative sampling strategy, whereby the Fund would invest in what it believes to be a representative sample of the component securities of the Index. To the extent the Fund uses a representative sampling strategy, it may not track the Index with the same degree of accuracy as would an investment vehicle replicating the entire Index.

The Fund will concentrate its investments in a particular industry or group of industries to the extent that the Index concentrates in an industry or group of industries. The Fund may engage in frequent trading of portfolio securities.

Principal Investment Risks

As with any ETF, there is no guarantee that the Fund will achieve its objective. Investment markets are unpredictable and there will be certain market conditions where the Fund will not meet its investment objective and will lose

money. The Fund's net asset value, market price and returns will vary, and you could lose money on your investment in the Fund and those losses could be significant. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

The following summarizes the principal risks of investing in the Fund. These risks could adversely affect the net asset value, market price, total return and the value of the Fund and your investment. These risks affect the Fund directly as well as through the ETFs in which it invests.

ADR Risk. ADRs, which are typically issued by a bank, are certificates that evidence ownership of shares of a foreign company and are alternatives to purchasing foreign securities directly in their national markets and currencies. ADRs are subject to the same risks as direct investment in foreign companies discussed below and involve risks that are not found in investments in U.S. companies. ADRs may not track the price of the underlying foreign securities on which they are based, and their value may change materially at times when U.S. markets are not open for trading. Certain ADRs are not listed on an exchange and therefore may be considered to be illiquid.

ADR Currency Risk. To establish a value for the shares, the issuer establishes a "conversion rate" equal to one share of an ADR for a certain number of shares of the stock of a foreign company. This "conversion rate" establishes a universal monetary relationship between the value of the ADR and the local currency of the foreign company stock. Although an ADR is priced in the US dollar, in order to preserve the uniformity of the established "conversion rate," movements in the exchange rate of the local currency versus the US dollar are automatically reflected in the price of the ADR in US dollars. Therefore, even if the price of the foreign security does not change on its market, if the exchange rate of the local currency relative to the US Dollar declines, the ADR price would decline by a similar measure.

Authorized Participant Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. An "Authorized Participant" is a participant in the Continuous Net Settlement System of the National Securities Clearing Corporation or the Depository Trust Company ("DTC") and that has executed a Participant Agreement with the Fund's distributor ("Distributor"). To the extent these Authorized Participants exit the business or are unable to process creation and/or redemption orders and no other Authorized Participant is able to step forward to process creation and/or redemption orders, in either of these cases, shares of the Fund may trade like closed-end fund shares at a discount to NAV and possibly face delisting.

Changing Fixed Income Market Conditions Risk. The historically low interest rate environment observed over the past couple years was created in part by actions taken by the Board of Governors of the Federal Reserve System (the "Federal Reserve") to keep the federal funds rate at a low level, including expanding the scope of its repurchase agreement operations, and purchasing large quantities of securities issued or guaranteed by the U.S. government, its agencies or instrumentalities on the open market. More recently the Federal Reserve began raising the federal funds rate in an effort to help fight inflation. Increases in the federal funds and equivalent foreign interest rates or other changes to monetary policy or regulatory actions may expose fixed income markets to heightened volatility and reduced liquidity for certain fixed income investments, particularly those with longer maturities. It is difficult to predict the impact of interest rate changes on various markets. Such policy changes may expose fixed-income and related markets to heightened volatility and may reduce liquidity for certain Fund investments, which could cause the value of the Fund to decrease to the extent that it invests in fixed income securities.

Concentration Risk. The Fund will concentrate its investments in securities of a particular industry to the extent the Index does. Economic, legislative, or regulatory developments may occur that significantly affect the industry. This may cause the Fund's net asset value or market price to fluctuate more than that of the Fund that does not concentrate in a particular industry.

Currency Risk. If a Regional Equity ETF invests in securities that trade in, and receive revenues in, foreign currencies, it will be subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in

the case of hedging positions, that the U.S. dollar will decline in value relative to the currency being hedged. As a result, the Regional Equity ETF's investments in foreign currency-denominated securities may reduce the Fund's returns.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

Emerging Markets Risk. Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. Securities law and the enforcement of systems of taxation in many emerging market countries may change quickly and unpredictably, and the ability to bring and enforce actions, or to obtain information needed to pursue or enforce such actions, may be limited. Companies in emerging market countries generally may be subject to less stringent regulatory, disclosure, financial reporting, accounting, auditing and recordkeeping standards than companies in more developed countries. As a result, information, including financial information, about such companies may be less available and reliable, which can impede the Fund's ability to evaluate such companies. Emerging markets usually are subject to greater market volatility, political, social, and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than are more developed markets. Emerging market economies may be based on only a few industries and security issuers may be more susceptible to economic weakness and more likely to default. Emerging market securities also tend to be less liquid, and the prices of such securities tend to be more volatile than the securities of issuers located in developed markets. Investments in emerging market securities may be subject to additional transaction costs, delays in settlement procedures, unexpected market closures, and lack of timely information.

Equity Securities Risk. The price of equity securities will fluctuate based on actual or perceived changes in a company's financial condition and on market and economic conditions. Investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary, and fiscal policies; inflation and interest rates; economic expansion or contraction and global or regional political, economic and banking crises.

ETF Risk. Like a mutual fund, the value of an ETF can fluctuate based on the prices of the securities owned by the ETF, and ETFs are also subject to the following additional risks: (i) the ETF's market price may be less than its net asset value; (ii) an active market for the ETF may not develop or be maintained; and (iii) market trading in the ETF may be halted under certain circumstances. Because the Fund may invest its assets in ETFs that have their own fees and expenses in addition to those charged directly by the Fund, the Fund may bear higher expenses than the Fund that invests directly in individual securities.

ETF Structure Risks. The Fund is structured as an ETF and as a result is subject to special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough Shares to constitute a Creation Unit. Fund shares are typically bought and sold in the secondary market and investors typically pay brokerage commissions or other charges on these transactions.
- *Trading Issues.* Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a

collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.

- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund's net asset value.
 - The market price for the Fund's shares may deviate from the Fund's net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund's net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value.
 - In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value.

Financial Markets Regulatory Risk. Policy changes by the U.S. government or its regulatory agencies and political events within the U.S. and abroad may, among other things, affect investor and consumer confidence and increase volatility in the financial markets, perhaps suddenly and to a significant degree, which may adversely impact the Fund's operations, universe of potential investment options, and return potential.

Foreign Investment Risk. Investments in foreign securities tend to be more volatile and less liquid than investments in U.S. securities because, among other things, they involve risks relating to political, social, and economic developments abroad, including economic sanctions, as well as risks resulting from differences between the regulations and reporting standards and practices to which U.S. and foreign issuers are subject. Investing in foreign securities includes trading related risks (e.g., government supervision and regulation of foreign securities and currency markets, trading systems and brokers maybe less than in the U.S., and foreign securities may be subject to foreign governmental restrictions such as exchange controls). All of the risks of investing in foreign securities are typically increased by investing in emerging market countries. Securities denominated in foreign currencies may be adversely affected by changes in currency rates and by substantial currency conversion costs.

Geographic Concentration Risk. The Fund may be particularly susceptible to economic, political, regulatory, or other events or conditions affecting countries within the specific geographic regions in which the Regional Equity ETFs invest. Currency devaluations could occur in countries that have not yet experienced currency devaluation to date or could continue to occur in countries that have already experienced such devaluations. As a result, the Fund's net asset value may be more volatile than a more geographically diversified fund.

Index Risk. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily sell a security unless that security is removed from the Index, even if that security generally is underperforming. Additionally, the Fund rebalances its portfolio in

accordance with the Index, and, therefore, any changes to the Index's rebalance schedule will result in corresponding changes to the Fund's rebalance schedule.

Index-Related Risk. There is no assurance that the Index will be determined, composed, or calculated accurately. While the Index Providers provide descriptions of what the Index is designed to achieve, the Index Providers do not guarantee the quality, accuracy or completeness of data in respect of its indices and does not guarantee that the Index will be in line with the described index methodology. For example, during a period where the Index contains incorrect constituents, the Fund would have market exposure to such constituents and would be underexposed to the Index's other constituents. As such, errors may result in a negative or positive performance impact to the Fund and its shareholders. Shareholders should understand that losses resulting from errors may be borne by the Fund and its shareholders.

Issuer Specific Risk. The performance of the Fund depends on the performance of the issuers of the individual securities in which the Fund invests. Poor performance by any issuer may cause the value of its securities, and the value of the Fund's Shares, to decline. The value of a specific security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

Large Capitalization Stock Risk. Investments in larger, more established companies are subject to the risk that larger companies are sometimes unable to attain the high growth rates of successful, smaller companies, especially during extended periods of economic expansion. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Larger, more established companies may be unable to respond quickly to new competitive challenges such as changes in consumer tastes or innovative smaller competitors potentially resulting in lower markets for their common stock. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

Management Risk. As the Fund may not fully replicate the Index, it is subject to the risk that investment management strategy may not produce the intended results.

Market Risk. The value of securities in the Fund's portfolio will fluctuate and, as a result, the Fund's share price may decline suddenly or over a sustained period of time. Overall market risks may also affect the value of the Fund. Factors such as economic growth and market conditions, interest rate levels and political events affect the securities markets.

Mid/Small-Cap Stock Risk. The value of smaller and medium-capitalized company stocks may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general.

Model and Data Risk. Like all quantitative analysis, the investment models utilized by the Index carry the risk that the ranking system, valuation results and predictions might be based on one or more incorrect assumptions, insufficient historical data, inadequate design, or may not be suitable for the purpose intended. In addition, models may not perform as intended for many reasons including errors, omissions, imperfections, or malfunctions. Because models are usually constructed based on data supplied by third parties, the success of the Index's use of such models is dependent on the accuracy and reliability of the supplied data. Historical data inputs may be subject to revision or corrections, which may diminish data reliability and quality of predictive results. Changing and unforeseen market dynamics could also lead to a decrease in the short-term or long-term effectiveness of a model. Models may lose their predictive validity and incorrectly forecast future market behavior and asset prices, leading to potential losses. No assurance can be given that a model will be successful under all or any market conditions.

Passive Investment Risk. The Fund is not actively managed and may be affected by a general decline in market segments related to the Index. The Fund invests in securities included in, or representative of securities included in, the Index, regardless of their investment merits. The Fund does not take defensive positions under any market

conditions, including conditions that are adverse to the performance of the Fund, unless such defensive positions are also taken by the Index.

Sampling Risk. The sampling approach, if used, could result in its holding a smaller number of securities than are in the Index. As a result, an adverse development with an issuer of securities held by the Fund could result in a greater decline in NAV or market price than would be the case if the Fund held all of the securities in the Index. To the extent the assets in the Fund are smaller, these risks will be greater.

Tracking Error Risk. Tracking error is the divergence of the Fund's performance from that of the Index. Tracking error may occur because of imperfect correlation between the Fund's holdings of portfolio securities and those in the Index, pricing differences, the Fund's holding of cash, differences on timing of the accrual of dividends, changes to the Index or the need to meet various regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not.

Turnover Risk. The Fund may have a high turnover of the securities held in its portfolio. Increased portfolio turnover causes the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance and may produce increased taxable distributions.

Underlying Fund Risk. The ETFs in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the ETFs and may be higher than other funds that invest directly in stocks and bonds. Each of the ETFs is subject to its own specific risks and are also subject to the following additional risks: (i) the ETF's market price may be less than its net asset value; (ii) an active market for the ETF may not develop or be maintained; and (iii) market trading in the ETF may be illiquid or even halted under certain circumstances.

U.S. Government Obligations Risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may not be backed by the full faith and credit of the U.S. government, which could affect the Fund's ability to recover should they default. No assurance can be given that the U.S. government will provide financial support to its agencies and authorities if it is not obligated by law to do so.

Performance:

The bar chart and accompanying table shown below provide an indication of the risks of investing in the Fund by showing the total return of its shares for each full calendar year, and by showing how its average annual returns compare over time with those of the Newfound/ReSolve Robust Equity Momentum Index as well as a broad-based market index reflecting the performance of growth stocks. How the Fund has performed in the past (before and after taxes) is not necessarily an indication of how it will perform in the future. Updated performance information is available at no cost at www.strategysharesetfs.com or by calling (855) 4SS-ETFS or (855) 477-3837.

Annual Total Return

During the period shown in the bar chart, the highest return for a quarter was 12.13% (quarter ended December 31, 2020), and the lowest return for a quarter was (19.46)% (quarter ended March 31, 2020).

The Fund's year-to-date return as of June 30, 2023 was 6.12%.

Average Annual Total Returns (for the periods ended December 31, 2022)

	1 Year	Since Inception (November 1, 2019)
Return Before Taxes	(18.81)%	(0.14)%
Return After Taxes on Distributions	(19.05)%	(0.41)%
Return After Taxes on Distributions and Sale of Fund Shares	(11.12)%	(0.15)%
Newfound/ReSolve Robust Equity Momentum Index (reflects no deduction for fees, expenses or taxes)	(18.27)%	(0.16)%
S&P Target Risk Growth Index (reflects no deduction for fees, expenses or taxes)	(15.27)%	2.64%

Advisor: Rational Advisors, Inc. is the Fund's investment advisor (the "Advisor").

Portfolio Managers: David Miller, Senior Portfolio Manager of the Advisor, and Charles Ashley, Portfolio Manager of the Advisor, serve as the Fund's Portfolio Managers and are jointly and primarily responsible for the day-to-day management of the Fund. Mr. Miller serves as the Fund's Lead Portfolio Manager. Messrs. Miller and Ashley have served the Fund in this capacity since it commenced operations in November 2019.

Purchase and Sale of Fund Shares: You may purchase and sell individual Fund shares at market prices on the Cboe BZX Exchange, Inc. (the "Exchange") through your financial institution on each day that the Exchange is open for business ("Business Day"). Because individual Fund shares trade at market prices rather than at their NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount). You may incur costs

attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”).

Recent information, including information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.strategysharesetfs.com.

Tax Information: The Fund’s distributions are taxable as ordinary income or capital gains, except when your investment is through a tax-advantaged account such as an Individual Retirement Account (IRA) or you are a tax-exempt investor. Distributions from a tax-advantaged account may be taxed as ordinary income when withdrawn from such account.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND’S PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

Investment Objective

The Fund’s investment objective is to seek to provide investment returns that correspond, before fees and expenses, to the performance of the Newfound/ReSolve Robust Equity Momentum Index. The investment objective of the Fund is non-fundamental and may be changed by the Board of Trustees without shareholder approval. If the Board decides to change the Fund’s investment objective shareholders will be given 60 days’ advance notice.

Principal Investment Strategies

The Fund employs a “passive management” (or indexing) investment approach designed to track the total return performance, before fees and expenses, of the Newfound/ReSolve Robust Equity Momentum Index (the “Index”). The Index is based on a proprietary methodology co-developed and co-owned by Newfound Research LLC and ReSolve Asset Management SEZC (Cayman) (the “Index Providers”). The Index is calculated and maintained by Solactive AG. The Fund will invest at least 80% of its assets in the component securities of the Index.

The Index uses a quantitative, rules-based methodology to provide exposure to broad U.S. equity, international equity, and emerging market equity indices, to the extent that such equity indices are exhibiting positive momentum relative to U.S. Treasury market indices. The Index generally consists of exchange-traded funds (“ETFs”) that track regional equity indices, representative of U.S. equities, developed international equities and emerging market equities (“Regional Equity ETFs”), as well as ETFs that track U.S. Treasury market indices, representative of short-term (i.e., 1-2 year maturity) U.S. Treasury notes and intermediate-term (i.e., 7-10 year maturity) U.S. Treasury bonds (“U.S. Treasury ETFs”). The Regional Equity ETFs that may be included in the Index invest in the equity securities, including common stock and American Depository Receipts (“ADRs”), of companies of any market capitalization that are traded on foreign or U.S. exchanges. The Index typically includes between one and five ETFs. Because the Index is comprised of securities issued by other investment companies, the Fund operates as a “fund of funds.”

The allocations to Regional Equity ETFs within the Index are determined by proprietary quantitative models that include momentum and trend following factors that are evaluated over various time horizons. The weightings of Regional Equity ETFs within the Index are determined based on measures of the momentum of the global equity markets relative to the momentum of U.S. Treasury securities. Regional Equity ETFs with the strongest momentum characteristics that also exhibit positive trend following characteristics receive greater weights. The Fund may have 100% portfolio exposure to U.S. Regional Equity ETFs or developed international Regional Equity ETFs, and up to 25% portfolio exposure in emerging market Regional Equity ETFs.

The Index will include U.S. Treasury ETFs when Regional Equity ETFs exhibit negative momentum and trend following characteristics versus the U.S. Treasury markets. The Fund may have 100% portfolio exposure to U.S. Treasury ETFs under such circumstances.

The Index is rebalanced weekly and is reconstituted annually in December.

The Fund generally will use a replication methodology, meaning it will seek to invest in all of the ETFs comprising the Index in proportion to the weightings in the Index. However, under various circumstances, the Fund may use a representative sampling strategy, whereby the Fund would invest in what it believes to be a representative sample of the component securities of the Index. The Fund may use a representative sampling strategy when a replication strategy might be detrimental to shareholders, such as when there are practical difficulties or substantial costs involved in compiling a portfolio of securities to follow the Index (e.g., where the Index contains component securities too numerous to efficiently purchase or sell); or, in certain instances, when a component security of the Index becomes temporarily illiquid, unavailable or less liquid. The Fund may also use a representative sampling strategy to exclude less liquid component securities contained in the Index from the Fund's portfolio in order to create a more tradable portfolio and improve arbitrage opportunities. To the extent the Fund uses a representative sampling strategy, it may not track the Index with the same degree of accuracy as would an investment vehicle replicating the entire Index.

The Fund will concentrate its investments in a particular industry or group of industries to the extent that the Index concentrates in an industry or group of industries. The Fund may engage in frequent trading of portfolio securities.

Principal Investment Risks

All ETFs carry a certain amount of risk. As with any ETF, there is no guarantee that the Fund will achieve its objective. Investment markets are unpredictable and there will be certain market conditions where the Fund will not meet its investment objective and will lose money. The Fund's net asset value, market price and returns will vary, and you could lose money on your investment in the Fund and those losses could be significant. An investment in the Fund is not a complete investment program.

The following summarizes the principal risks of the Fund. These risks could adversely affect the net asset value, market price, total return and the value of the Fund and your investment. The risk descriptions below provide a more detailed explanation of the principal investment risks that correspond to the risks described in the Fund's Fund Summary section of the Prospectus. These risks affect the Fund directly as well as through the Underlying Funds in which it invests.

American Depositary Receipts ("ADRs") Risk. ADRs, which are typically issued by a bank, are certificates that evidence ownership of shares of a foreign company and are alternatives to purchasing foreign securities directly in their national markets and currencies. ADRs are subject to the same risks as direct investment in foreign companies and involve risks that are not found in investments in U.S. companies. In addition to the risks of investing in foreign securities discussed below, there is no guarantee that an ADR issuer will continue to offer a particular ADR. As a result, the Fund may have difficulty selling the ADR, or selling them quickly and efficiently at the prices at which they have been valued. In a sponsored ADR arrangement, the foreign company assumes the obligation to pay some

or all of the depository's transaction fees. Under an unsponsored ADR arrangement, the foreign company assumes no obligations and the depository's transaction fees are paid directly by the ADR holders. Because unsponsored ADR arrangements are organized independently and without the cooperation of the foreign company, available information concerning the foreign company may not be as current as for sponsored ADRs and voting rights with respect to the deposited securities are not passed through. ADRs may not track the price of the underlying foreign securities on which they are based, and their value may change materially at times when U.S. markets are not open for trading. Certain ADRs are not listed on an exchange and therefore may be considered to be illiquid. Because ADRs are denominated in US dollars, they are also subject to currency risk, as movements in the exchange rate of the local currency of the foreign issuer versus the US dollar are automatically reflected in the price of the ADR in US dollars. Therefore, even if the price of the foreign security does not change on its local market, if the exchange rate of the local currency relative to the US dollar declines, the ADR price would decline by a similar measure.

ADR Currency Risk. To establish a value for the shares, the issuer establishes a "conversion rate" equal to one share of an ADR for a certain number of shares of the stock of a foreign company. This "conversion rate" establishes a universal monetary relationship between the value of the ADR and the local currency of the foreign company stock. Although an ADR is priced in the US dollar, in order to preserve the uniformity of the established "conversion rate," movements in the exchange rate of the local currency versus the US dollar are automatically reflected in the price of the ADR in US dollars. Therefore, even if the price of the foreign security does not change on its market, if the exchange rate of the local currency relative to the US Dollar declines, the ADR price would decline by a similar measure.

Authorized Participant Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. An "Authorized Participant" is a participant in the Continuous Net Settlement System of the National Securities Clearing Corporation or the Depository Trust Company ("DTC") and that has executed a Participant Agreement with the Fund's distributor ("Distributor"). To the extent these Authorized Participants exit the business or are unable to process creation and/or redemption orders and no other Authorized Participant is able to step forward to process creation and/or redemption orders, in either of these cases, shares of the Fund may trade like closed-end fund shares at a discount to NAV and possibly face delisting.

Changing Fixed Income Market Conditions Risk. Changes to monetary policy, particularly increases in the federal funds rate by the Board of Governors of the Federal Reserve System (the "Federal Reserve") or increases in equivalent foreign interest rates, could cause the value of the Fund to decrease. Federal Reserve policy changes may expose fixed-income and related markets to heightened volatility and may reduce liquidity for certain Fund investments, which could cause the value of the Fund's investments and share price to decline. To the extent the Fund experiences high redemptions because of these policy changes, the Fund may experience increased portfolio turnover, which will increase the costs the Fund incurs and may lower its performance. Furthermore, if rising interest rates cause the Fund to lose enough value, the Fund could also face increased redemptions, which could force the Fund to liquidate investments at disadvantageous times or prices, therefore adversely affecting the Fund. In addition, decreases in fixed income dealer market-making capacity may persist in the future, potentially leading to decreased liquidity and increased volatility in the fixed income markets.

Concentration Risk. The Fund will concentrate its investments in securities of a particular industry to the extent the Index does. Economic, legislative, or regulatory developments may occur that significantly affect the industry. This may cause the Fund's net asset value to fluctuate more than that of a fund that does not concentrate in a particular industry.

Currency Risk. Currency trading involves significant risks, including market risk, interest rate risk, country risk, counterparty credit risk and short sale risk. Market risk results from the price movement of foreign currency values in response to shifting market supply and demand. Since exchange rate changes can readily move in one direction, a currency position carried overnight or over a number of days may involve greater risk than one carried a few minutes or hours. Interest rate risk arises whenever a country changes its stated interest rate target associated with

its currency. Country risk arises because virtually every country has interfered with international transactions in its currency. Interference has taken the form of regulation of the local exchange market, restrictions on foreign investment by residents or limits on inflows of investment funds from abroad. Restrictions on the exchange market or on international transactions are intended to affect the level or movement of the exchange rate. This risk could include the country issuing a new currency, effectively making the “old” currency worthless.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

Emerging Market Risk. The Fund may invest in countries with newly organized or less developed securities markets. There are typically greater risks involved in investing in emerging market securities. Generally, economic structures in these countries are less diverse and mature than those in developed countries and their political systems tend to be less stable. Emerging market countries may have a higher degree of corruption and fraud than developed market countries, as well as counterparties and financial institutions with less financial sophistication, creditworthiness and/or resources. Emerging market economies may be based on only a few industries, therefore security issuers, including governments, may be more susceptible to economic weakness and more likely to default. Emerging market countries may also have higher rates of inflation and more rapid and extreme fluctuations in inflation rates and greater sensitivity to interest rate changes. Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. Therefore, laws regarding foreign investment in emerging market securities, securities regulation, title to securities, and shareholder rights may change quickly and unpredictably. Emerging market countries also may have less developed legal systems allowing for enforcement of private property rights and/or redress for injuries to private property, such as bankruptcy. The ability to bring and enforce actions in emerging market countries, or to obtain information needed to pursue or enforce such actions, may be limited and shareholder claims may be difficult or impossible to pursue. In addition, the taxation systems at the federal, regional, and local levels in emerging market countries may be less transparent and inconsistently enforced, and subject to sudden change. Further, companies in emerging market countries generally may be subject to less stringent regulatory, disclosure, financial reporting, accounting, auditing, and recordkeeping standards than companies in more developed countries and, as a result, the nature and quality of such information may vary. Information about such companies may be less available and reliable and, therefore, the ability to conduct adequate due diligence in emerging markets may be limited, which can impede the Fund’s ability to evaluate such companies. In addition, certain emerging market countries may impose material limitations on Public Company Accounting Oversight Board (“PCAOB”) inspection, investigation and enforcement capabilities which hinder the ability to engage in independent oversight or inspection of accounting firms located in or operating in certain emerging markets; there is no guarantee that the quality of financial reporting or the audits conducted by audit firms of emerging market issuers meet PCAOB standards. The potentially smaller size of emerging market countries’ securities markets and lower trading volumes can make investments relatively illiquid and potentially more volatile than investments in developed countries, and such securities may be subject to abrupt and severe price declines. Due to this relative lack of liquidity, the Fund may have to accept a lower price or may not be able to sell a portfolio security at all. An inability to sell a portfolio position can adversely affect the Fund’s value or prevent the Fund from being able to meet cash obligations or take advantage of other investment opportunities. Other risks of investing in emerging market securities may include additional transaction costs, delays in settlement procedures, unexpected market closures, and lack of timely information.

Equity Securities Risk. The price of equity securities will fluctuate based on actual or perceived changes in a company’s financial condition and on market and economic conditions. Investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary, and fiscal policies; inflation and interest rates; economic expansion or contraction and global or regional political, economic, and banking crises.

ETF Risk. Like a mutual fund, the value of an ETF can fluctuate based on the prices of the securities owned by the ETF, and ETFs are also subject to the following additional risks: (i) the ETF's market price may be less than its net asset value; (ii) an active market for the ETF may not develop or be maintained; and (iii) market trading in the ETF may be halted under certain circumstances. Because the Fund may invest its assets in ETFs that have their own fees and expenses in addition to those charged directly by the Fund, the Fund may bear higher expenses than the Fund that invests directly in individual securities.

ETF Structure Risk. The Fund is structured as an ETF and as a result is subject to special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough Shares to constitute a Creation Unit. Fund shares are typically bought and sold in the secondary market and investors typically pay brokerage commissions or other charges on these transactions.
- *Trading Issues.* Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.
- *Market Price Variance Risk.* Individual Shares of the Fund that are listed for trading on the Exchange can be bought and sold in the secondary market at market prices. The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares. There may be times when the market price and the NAV vary significantly and you may pay more than NAV when buying Shares on the secondary market, and you may receive less than NAV when you sell those Shares. The market price of Shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that Shares may trade at a discount to NAV and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Fund's investment results are measured based upon the daily NAV of the Fund over a period of time. Investors purchasing and selling Shares in the secondary market may not experience investment results consistent with those experienced by those creating and redeeming directly with the Fund.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund's net asset value.
 - The market price for the Fund's shares may deviate from the Fund's net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund's net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETF's underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value.
 - In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value. Because bid-ask spreads vary over time based on trading volume and market liquidity (including for the underlying securities held by the Fund), spreads may widen if the Fund's shares have little trading volume

and market liquidity. Conversely, the bid-ask spreads will generally be narrower if the Fund's shares have more trading volume and market liquidity.

Financial Markets Regulatory Risk. Policy changes by the U.S. government or its regulatory agencies and political events within the U.S. and abroad may, among other things, affect investor and consumer confidence and increase volatility in the financial markets, perhaps suddenly and to a significant degree, which may adversely impact the Fund's operations, universe of potential investment options, and return potential.

Foreign Investment Risk. To the extent the Fund invests in foreign securities, the Fund could be subject to greater risks because the Fund's performance may depend on issues other than the performance of a particular company or U.S. market sector. Changes in foreign economies and political climates are more likely to affect the Fund than they would a mutual fund that invests exclusively in U.S. companies. The value of foreign securities is also affected by the value of the local currency relative to the U.S. dollar. There may also be less government supervision of foreign markets, resulting in non-uniform accounting practices and less publicly available information. The values of foreign investments may be affected by changes in exchange control regulations, application of foreign tax laws (including withholding tax), changes in governmental administration or economic or monetary policy (in this country or abroad) or changed circumstances in dealings between nations. In addition, foreign brokerage commissions, custody fees and other costs of investing in foreign securities are generally higher than in the United States. Investments in foreign issuers could be affected by other factors not present in the United States, including expropriation, armed conflict, confiscatory taxation, and potential difficulties in enforcing contractual obligations. As a result, the Fund may be exposed to greater risk and will be more dependent on the Advisor's ability to assess such risk than if the Fund invested solely in more developed countries.

Geographic Concentration Risk. The Fund may be particularly susceptible to economic, political, regulatory, or other events or conditions affecting countries within the specific geographic regions in which the Fund invests. Currency devaluations could occur in countries that have not yet experienced currency devaluation to date or could continue to occur in countries that have already experienced such devaluations. As a result, the Fund's net asset value or market price may be more volatile than a more geographically diversified fund.

Index Risk. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily sell a security unless that security is removed from the Index, even if that security generally is underperforming. Additionally, the Fund rebalances its portfolio in accordance with the Index, and, therefore, any changes to the Index's rebalance schedule will result in corresponding changes to the Fund's rebalance schedule. Further, unlike with an actively managed fund, the Advisor does not use techniques or defensive strategies designed to lessen the impact of periods of market volatility or market decline. This means that, based on certain market and economic conditions, the Fund's performance could be lower than other types of mutual funds with investment advisers that actively manage their portfolio assets to take advantage of or defend against market events.

Index-Related Risk. There is no assurance that the Index will be determined, composed, or calculated accurately. While the Index Providers provide descriptions of what the Index is designed to achieve, the Index Providers do not guarantee the quality, accuracy, or completeness of data in respect of its indices and does not guarantee that the Index will be in line with the described index methodology. For example, during a period where the Index contains incorrect constituents, the Fund would have market exposure to such constituents and would be underexposed to the Index's other constituents. As such, errors may result in a negative or positive performance impact to the Fund and its shareholders. Shareholders should understand that losses resulting from errors may be borne by the Fund and its shareholders.

Issuer Specific Risk. The performance of the Fund depends on the performance of the issuers of the individual securities in which the Fund invests. Poor performance by any issuer may cause the value of its securities, and the value of the Fund's Shares, to decline. The value of a specific security can be more volatile than the market as a

whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than those of larger issuers. The value of certain types of securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market, or economic developments. Market prices of securities in broad market segments may be adversely affected by a prominent issuer having experienced losses, lack of earnings, failure to meet the market's expectations with respect to new products or services, or even by factors wholly unrelated to the value or condition of the issuer, such as changes in interest rates.

Large Capitalization Company Risk. Investments in larger, more established companies are subject to the risk that larger companies are sometimes unable to attain the high growth rates of successful, smaller companies, especially during extended periods of economic expansion. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. Larger, more established companies may be unable to respond quickly to new competitive challenges such as changes in consumer tastes or innovative smaller competitors potentially resulting in lower markets for their common stock. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

Management Risk. As the Fund may not fully replicate the Index, it is subject to the risk that investment management strategy may not produce the intended results.

Market Risk. Overall market risks may also affect the value of the Fund. The market values of securities or other investments owned by the Fund will go up or down, sometimes rapidly or unpredictably. Factors such as economic growth and market conditions, interest rate levels, exchange rates and political events affect the securities markets. Changes in market conditions and interest rates generally do not have the same impact on all types of securities and instruments. Unexpected local, regional or global events and their aftermath, such as war; acts of terrorism; financial, political or social disruptions; natural, environmental or man-made disasters; the spread of infectious illnesses or other public health issues; recessions and depressions; or other tragedies, catastrophes and events could have a significant impact on the Fund and its investments and could result in increased premiums or discounts to the Fund's net asset value, and may impair market liquidity, thereby increasing liquidity risk. Such events can cause investor fear and panic, which can adversely affect the economies of many companies, sectors, nations, regions, and the market in general, in ways that cannot necessarily be foreseen. The Fund could lose money over short periods due to short-term market movements and over longer periods during more prolonged market downturns. During a general market downturn, multiple asset classes may be negatively affected. In times of severe market disruptions, you could lose your entire investment.

The global outbreak of COVID-19 caused adverse effects on many companies, sectors, nations, regions and the markets in general, and these effects may continue for an unpredictable duration. The effects of this pandemic may materially impact the value and performance of a Fund, its ability to buy and sell fund investments at appropriate valuations and its ability to achieve its investment objective.

Medium (Mid) Capitalization Company Risk. To the extent the Fund invests in the stocks of mid-sized companies, the Fund may be subject to additional risks. The earnings and prospects of these companies are more volatile than larger companies. These companies may experience higher failure rates than larger companies. Mid-sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures. Mid-sized companies may also have limited markets, product lines or financial resources and may lack management experience.

Model and Data Risk. Like all quantitative analysis, the investment models utilized by the Index carry the risk that the ranking system, valuation results and predictions might be based on one or more incorrect assumptions, insufficient historical data, inadequate design, or may not be suitable for the purpose intended. In addition, models may not perform as intended for many reasons including errors, omissions, imperfections, or malfunctions. Because

the use of models is usually constructed based on data supplied by third parties, the success of the Index's use of such models is dependent on the accuracy and reliability of the supplied data. Historical data inputs may be subject to revision or corrections, which may diminish data reliability and quality of predictive results. Changing and unforeseen market dynamics could also lead to a decrease in the short-term or long-term effectiveness of a model. Models may lose their predictive validity and incorrectly forecast future market behavior and asset prices, leading to potential losses. No assurance can be given that a model will be successful under all or any market conditions.

Passive Investment Risk. The Fund is not actively managed and may be affected by a general decline in market segments related to the Index. The Fund invests in securities included in, or representative of securities included in, the Index, regardless of their investment merits. The Fund does not take defensive positions under any market conditions, including conditions that are adverse to the performance of the Fund, unless such defensive positions are also taken by the Index.

Sampling Risk. The sampling approach, if used, could result in its holding a smaller number of securities than are in the Index. As a result, an adverse development with an issuer of securities held by the Fund could result in a greater decline in NAV or market price than would be the case if the Fund held all of the securities in the Index. To the extent the assets in the Fund are smaller, these risks will be greater.

Small Capitalization Company Risk. To the extent the Fund invests in the stocks of smaller-sized companies, the Fund may be subject to additional risks. The earnings and prospects of these companies are more volatile than larger companies. Smaller-sized companies may experience higher failure rates than do larger companies. The trading volume of securities of smaller-sized companies is normally less than that of larger companies and, therefore, may disproportionately affect their market price, tending to make them fall more in response to selling pressure than is the case with larger companies. Smaller-sized companies may have limited markets, product lines or financial resources and may lack management experience.

Tracking Error Risk. Tracking error is the divergence of the Fund's performance from that of the Index. Tracking error may occur because of imperfect correlation between the Fund's holdings of portfolio securities and those in the Index, pricing differences, the Fund's holding of cash, differences on timing of the accrual of dividends, changes to the Index or the need to meet various regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not.

Turnover Risk. The Fund may have a high turnover of the securities held in its portfolio. Increased portfolio turnover causes the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance and may produce increased taxable distributions.

Underlying Fund Risk. Other investment companies, that is ETFs ("Underlying Funds") in which the Fund invests, are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the Underlying Funds and may be higher than other funds that invest directly in stocks and bonds. Each of the Underlying Funds is subject to its own specific risks. Certain additional risks of investing in ETFs are described below:

- *Net Asset Value and Market Price Risk.* The market value of ETF shares may differ from their net asset value. This difference in price may be due to the fact that the supply and demand in the market for fund shares at any point in time is not always identical to the supply and demand in the market for the underlying basket of securities. Accordingly, there may be times when shares trade at a premium or discount to net asset value.

U.S. Government Obligations Risk. U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. government and generally have negligible credit risk. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may not be backed by the full faith and credit of the U.S. government, which could affect the Fund’s ability to recover should they default. No assurance can be given that the U.S. government will provide financial support to its agencies and authorities if it is not obligated by law to do so.

Non-Principal Investment Risks

Descriptions of non-principal risks are set forth below. These risks could adversely affect the net asset value, market price, total return and the value of the Fund and your investment.

Affiliated Investment Company Risk. The Fund may invest in affiliated underlying funds (the “Affiliated Funds”), unaffiliated underlying funds, or a combination of both. The Advisor, therefore, is subject to conflicts of interest in allocating the Fund’s assets among the underlying funds. The Advisor will receive more revenue to the extent it selects an Affiliated Fund rather than an unaffiliated fund for inclusion in the Fund’s portfolio. In addition, the Advisor may have an incentive to allocate the Fund’s assets to those Affiliated Funds for which the net advisory fees payable to the Advisor are higher than the fees payable by other Affiliated Funds.

Asset-Backed Securities Risk. Asset-backed securities may be subject to prepayment risk. If interest rates fall, the underlying debt may be repaid ahead of schedule, reducing the value of the Fund’s investments. As a result, the Fund may reinvest these early payments at lower interest rates, thereby reducing the Fund’s income. If interest rates rise, there may be fewer prepayments, which would cause the average bond maturity to rise, increasing the potential for the Fund to lose money and causing the price of the asset-backed securities, and the Fund’s net asset value per share, to fall. Asset-backed securities are also subject to extension risk. The prices of asset-backed securities may decrease more than prices of other fixed-income securities when interest rates rise. The value of asset-backed securities may be significantly affected by changes in interest rates, the market’s perception of issuers, and the creditworthiness of the parties involved. The ability of the Fund to successfully utilize these instruments may depend on the ability of the Advisor to forecast interest rates and other economic factors correctly. The Advisor’s assessment, or a rating agency’s assessment, of borrower credit quality, default rates and loss rates may prove to be overly optimistic. These securities may have a structure that makes their reaction to interest rate changes and other factors difficult to predict, making their value highly volatile. The more senior security classes are generally entitled to receive payment before the subordinate classes if the cash flow generated by the underlying assets is not sufficient to pay all investors. Asset-backed securities may be secured by pools of loans, such as student loans, automobile loans, equipment leases, and credit card receivables. The credit risk on such securities is affected by borrowers or lessees defaulting on their payments. The value of assets underlying asset-backed securities may decline and, therefore, may not be adequate to cover underlying investors. Possible legislation in the area of credit cards and other loans that may collateralize the securities in which the Fund may invest could negatively impact the value of the Fund’s investments. To the extent the Fund focuses its investments in particular types of asset-backed securities, the Fund may be more susceptible to risk factors affecting such types of securities.

Bank Loans Risk. The market for bank loans may not be highly liquid and the Fund may have difficulty selling them. These investments expose the Fund to the credit risk of both the financial institution and the underlying borrower. Bank loans settle on a delayed basis, potentially leading to the sale proceeds of such loans not being available to meet redemptions for a substantial period of time after the sale of the bank loans. Certain bank loans may not be considered “securities” under the federal securities laws and purchasers, such as the Fund, therefore may not be entitled to rely on the protections of such laws, including anti-fraud provisions.

Basic Materials Industry Risk. To the extent that the Fund’s investments are exposed to issuers conducting business in basic materials, the Fund is subject to the risk that the securities of such issuers will underperform the market as a whole due to legislative or regulatory changes, adverse market conditions and/or increased competition

affecting that economic sector. World events, political, environmental, and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations may adversely affect such issuers. The prices of the securities of basic materials companies also may fluctuate widely in response to such events.

Business Development Companies (“BDC”) Risk. BDCs may carry risks similar to those of a private equity or venture capital fund. BDC company securities are not redeemable at the option of the shareholder, and they may trade in the market at a discount to their net asset value. A BDC is a form of investment company that is required to invest at least 70% of its total assets in securities (typically debt) of private companies, thinly traded U.S. public companies, or short-term high-quality debt securities. The BDCs held by the Fund may leverage their portfolios through borrowings or the issuance of preferred stock. While leverage often serves to increase the yield of a BDC, this leverage also subjects a BDC to increased risks, including the likelihood of increased volatility and the possibility that a BDC’s common share income will fall if the dividend rate of the preferred shares or the interest rate on any borrowings rises. A significant portion of a BDC’s investments are recorded at fair value as determined by its board of directors, which may create uncertainty as to the value of the BDC’s investments. Non-traded BDCs are illiquid, and it may not be possible to redeem shares or to do so without paying a substantial penalty. Publicly traded BDCs usually trade at a discount to their net asset value because they invest in unlisted securities and have limited access to capital markets. BDCs are subject to high failure rates among the companies in which they invest, and federal securities laws impose restraints upon the organization and operations of BDCs that can limit or negatively impact the performance of a BDC. However, the Fund does not believe it would be liable for the actions of any entity in which it invests and that only its investment is at risk. Also, BDCs may engage in certain principal and joint transactions that a mutual fund or closed-end fund may not without an exemptive order from the SEC.

Capacity Risk. The markets and securities in which the Fund invests may, at times, have limited capacity, and the Advisor may not be able to allocate as much of the Fund’s assets to a particular investment or type of investment as it desires. Under such conditions, the execution of the Fund’s strategy may be affected, and the Fund may not achieve its investment objective. In addition, the Fund may not be able to purchase or sell securities at favorable market prices.

Cash and Cash Equivalents Risk. At times, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund’s performance and the Fund may not achieve its investment objective.

Cash Transactions Risk. ETFs generally are able to make in-kind redemptions and avoid being taxed on gain on the distributed portfolio securities at the Fund level. Because the Fund may effect redemptions partly or entirely in cash, rather than in-kind, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. If the Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized, or to recognize such gain sooner than would otherwise be required if it were to distribute portfolio securities in-kind. The Fund generally intends to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in a different ETF. Moreover, cash transactions may have to be carried out over several days if the securities market is relatively illiquid and may involve considerable brokerage fees and taxes. These brokerage fees and taxes, which will be higher than if the Fund sold and redeemed its shares principally in-kind, could be imposed on the Fund and thus decrease the Fund’s NAV to the extent they are not offset by the creation and redemption transaction fees paid by purchasers and redeemers of Creation Units.

Collateralized Debt Obligations (“CDOs”) and Collateralized Loan Obligations (“CLOs”) Risk. CDOs and CLOs are securities backed by an underlying portfolio of debt and loan obligations, respectively. CDOs and CLOs issue classes or “tranches” that vary in risk and yield and may experience substantial losses due to actual defaults, decrease of market value due to collateral defaults and removal of subordinate tranches, market anticipation of defaults and investor aversion to CDO and CLO securities as a class. The risks of investing in CDOs and CLOs depend largely on the tranche invested in and the type of the underlying debts and loans in the tranche of the CDO or CLO, respectively, in which the Fund invests. The risks of investing in CDOs and CLOs depend largely on the tranche held by the Fund and the types of underlying debts and loans in such tranche of the CDO or CLO, respectively. The risks of CDOs and CLOs will be greater if the Fund invests in CDOs and CLOs that hold debt or loans of uncreditworthy borrowers or if the Fund holds subordinate tranches of the CDO or CLO that absorb losses from the defaults before senior tranches. CDOs and CLOs are also subject to additional risks including, but not limited to, interest rate risk and credit risk.

Commodity Risk. The Fund’s exposure to the commodities futures markets may subject the Fund to greater volatility than investments in traditional securities. The value of commodity-linked derivative instruments, commodity-based exchange-traded trusts and commodity-based exchange-traded funds and notes may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or sectors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs, and international economic, political, and regulatory developments.

Conflict of Interest - Advisors Risk. The Advisor and other individuals associated with the Advisor may have compensation and/or other arrangements that may be in conflict to the interests of the Fund.

Conflict of Interest - Portfolio Manager Risk. Actual or apparent conflicts of interest may arise when a portfolio manager has day-to-day management responsibilities with respect to more than one fund or other accounts. More specifically, portfolio managers who manage multiple funds are presented with the following potential conflicts:

- The management of multiple accounts may result in a portfolio manager devoting unequal time and attention to the management of each account. The management of multiple funds and accounts also may give rise to potential conflicts of interest if the funds and accounts have different objectives, benchmarks, time horizons, and fees as the portfolio manager must allocate his time and investment ideas across multiple funds and accounts.
- With respect to securities transactions for the Fund, the Advisor determines which broker to use to execute each order, consistent with the duty to seek best execution of the transaction. The portfolio manager may execute transactions for another fund or account that may adversely impact the value of securities held by the Fund. Securities selected for funds or accounts other than the Fund may outperform the securities selected for the Fund.
- The appearance of a conflict of interest may arise where the Advisor has an incentive, such as a performance-based management fee. The management of personal accounts may give rise to potential conflicts of interest; there is no assurance that the Fund’s code of ethics will adequately address such conflicts. One of the portfolio manager’s numerous responsibilities is to assist in the sale of Fund shares. Because the portfolio manager’s compensation is indirectly linked to the sale of Fund shares, they may have an incentive to devote time to marketing efforts designed to increase sales of Fund shares.
- The Advisor has adopted a code of ethics that, among other things, permits personal trading by employees under conditions where it has been determined that such trades would not adversely impact client accounts. Nevertheless, the management of personal accounts may give rise to potential conflicts of interest, and there is no assurance that these codes of ethics will adequately address such conflicts.

Convertible Securities Risk. Convertible bonds are hybrid securities that have characteristics of both bonds and common stocks and are subject to fixed income security risks and conversion value-related equity risk. Convertible bonds are similar to other fixed-income securities because they usually pay a fixed interest rate and are obligated to repay principal on a given date in the future. The market value of fixed-income securities tends to decline as interest rates increase. Convertible bonds are particularly sensitive to changes in interest rates when their conversion to equity feature is small relative to the interest and principal value of the bond. Convertible issuers may not be able to make principal and interest payments on the bond as they become due. Convertible bonds may also be subject to prepayment or redemption risk. If a convertible bond is called for redemption, the Fund will be required to surrender the security for redemption, convert it into the issuing company's common stock or cash at a time that may be unfavorable to the Fund. Convertible bonds have characteristics similar to common stocks especially when their conversion value is greater than the interest and principal value of the bond. If a convertible security's investment value is greater than its conversion value, its price will likely increase when interest rates fall and decrease when interest rates rise. If the conversion value exceeds the investment value, the price of the convertible security will tend to fluctuate directly with the price of the underlying equity security. The price of equity securities may rise or fall because of economic or political changes. Stock prices in general may decline over short or even extended periods of time. Market prices of equity securities in broad market segments may be adversely affected by a prominent issuer having experienced losses or by the lack of earnings or such an issuer's failure to meet the market's expectations with respect to new products or services, or even by factors wholly unrelated to the value or condition of the issuer, such as changes in interest rates. When a convertible bond's value is more closely tied to its conversion to stock feature, it is sensitive to the underlying stock's price.

Counterparty Risk. The Fund may engage in transactions in securities and financial instruments that involve counterparties. Counterparty risk is the risk that a counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest, or settlement payments, or otherwise honor its obligations and therefore delays or impairs the Fund's ability to recover its deposits with such counterparty. To limit the counterparty risk associated with such transactions, the Fund conducts business only with financial institutions judged by the Advisor to present acceptable credit risk.

Credit Risk. Credit risk is the risk that an issuer of a security will fail to pay principal and interest in a timely manner, reducing the Fund's total return. In addition, the credit quality of fixed income securities held by the Fund may be lowered if an issuer's financial condition changes. The issuer of a fixed income security may also default on its obligations. The Fund's exposure to credit risk may be increased through its investments in high-yield securities commonly known as "junk bonds." Credit risk may be substantial for the Fund.

Cybersecurity Risk. The computer systems, networks and devices used by the Fund and its service providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Fund and its service providers, systems, networks, or devices potentially can be breached. The Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact the Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its NAV; impediments to trading; the inability of the Fund, the Advisor and other service providers to transact business; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Fund invests; counterparties with which the Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and service providers for the Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

Derivatives Risk. The Fund may use derivatives including options, swaps, and other transactions.

- *Call Options Risk.* There are risks associated with the sale and purchase of call options. As the seller (writer) of a covered call option, the Fund assumes the risk of a decline in the market price of the underlying security below the purchase price of the underlying security less the premium received and gives up the opportunity for gain on the underlying security above the exercise option price. The Fund continues to bear the risk that it will lose money if the value of the security falls below the strike price. Option premiums are treated as short-term capital gains and when distributed to shareholders, are usually taxable as ordinary income, which may have a higher tax rate than long-term capital gains for shareholders holding Fund shares in a taxable account. As the buyer of a call option, the Fund assumes the risk that the market price of the underlying security will not increase above the strike price plus the premiums paid, so the Fund bears the risk that it will lose the premium paid for the option.
- *Credit Default Swap Risk.* Credit default swaps ("CDS") are typically two-party financial contracts that transfer credit exposure between the two parties. Under a typical CDS, one party (the "seller") receives pre-determined periodic payments from the other party (the "buyer"). The seller agrees to make compensating specific payments to the buyer if a negative credit event occurs, such as bankruptcy or default by the issuer of the underlying debt instrument. The use of CDS involves investment techniques and risks different from those associated with ordinary portfolio security transactions, such as potentially heightened counterparty, concentration, and exposure risks.
- *Credit Spread Options Risk.* The Fund's credit spread options positions expose the Fund to leverage risk because a small investment may produce large changes in Fund value. Additionally, the Fund's credit spread options positions expose the Fund to losses limited by the spread's price differential, which is the difference between the strike prices less the net credits from writing a call (put) option while buying a call (put) option at a higher (lower) strike price.
- *Forwards Risk.* Foreign currency forward contracts are a type of derivative contract whereby the Fund may agree to buy or sell a country's or region's currency at a specific price on a specific date, usually 30, 60, or 90 days in the future. These contracts are subject to the risk of political and economic factors applicable to the countries issuing the underlying currencies and may fall in value due to foreign market downswings or foreign currency value fluctuations. Forward foreign currency contracts are individually negotiated and privately traded so they are dependent upon the creditworthiness of the counterparty and subject to counterparty risk. The Fund's investment or hedging strategies may not achieve their objective.
- *Liquidity Risk.* It is possible that particular derivative investments might be difficult to purchase or sell, possibly preventing the Fund from executing positions at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations.
- *Options Market Risk.* Markets for options and options on futures may not always operate on a fair and orderly basis. At times, prices for options and options on futures may not represent fair market value and prices may be subject to manipulation, which may be extreme under some circumstances. The dysfunction and manipulation of volatility and options markets may make it difficult for the Fund to effectively implement its investment strategy and achieve its objectives and could potentially lead to significant losses.

- *Options Risk.* There are risks associated with the Fund's sale and purchase of call and put options. Generally, options may not be an effective hedge because they may have imperfect correlation to the value of a Fund's portfolio securities. Additionally, the underlying reference instrument on which the option is based may have imperfect correlation to the value of a Fund's portfolio securities. Generally, options may not be an effective hedge because they may have imperfect correlation to the value of the Fund's portfolio securities. As the buyer of a call option, the Fund risks losing the entire premium invested in the option if the underlying reference instrument does not rise above the strike price, which means the option will expire worthless. As the buyer of a put option, the Fund risks losing the entire premium invested in the option if the underlying reference instrument does not fall below the strike price, which means the option will expire worthless. Additionally, purchased options may decline in value due to changes in price of the underlying reference instrument, passage of time and changes in volatility. As a seller (writer) of a put option, the Fund will lose money if the value of the underlying reference instrument falls below the strike price. As a seller (writer) of a call option, the Fund will lose money if the value of the underlying reference instrument rises above the strike price. The Fund's losses are potentially large in a written put transaction and potentially unlimited in a written call transaction. Option premiums are treated as short-term capital gains and when distributed to shareholders, are usually taxable as ordinary income, which may have a higher tax rate than long-term capital gains for shareholders holding Fund shares in a taxable account. Because option premiums paid or received by the Fund are small in relation to the market value of the investments underlying the options, buying and selling put and call options can be more speculative than investing directly in securities.

In general, option prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading options involves risks different from, or possibly greater than, the risks associated with investing directly in securities including:

- *Leverage and Volatility Risk.* Option contracts ordinarily have leverage inherent in their terms. The low initial investment normally required in trading options permits a high degree of leverage. Accordingly, a relatively small price movement in the underlying reference instrument may result in an immediate and substantial loss. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations or to meet collateral requirements. The use of options can amplify the effects of market volatility on the Fund's share price.
- *Liquidity Risk.* Although it is anticipated that the options traded will be actively traded, it is possible that particular options might be difficult to purchase or sell, possibly preventing the Fund from executing positions at an advantageous time or price, or possibly requiring it to dispose of other investments at unfavorable times or prices in order to satisfy its obligations.
- *Tracking Risk.* Options may not be perfect substitutes for the securities or other underlying reference instrument they are intended to track or hedge. Factors such as differences in supply and demand for certain options may cause their returns to deviate from the Advisor's expectations. Consequently, option returns may not be highly correlated to the securities they are intended to hedge.
- *Sub-strategy Risk.* Certain hedging strategies known as spreads or straddles expose the Fund to the risk that these sub-strategies may not perform as expected. In a spread transaction, the Fund will invest in a combination of long and sold (written) positions on an option on an underlying reference instrument but with, for example, different strike prices. The long option may underperform while the sold option increases in price more than the Advisor expects. In a straddle transaction, the Fund will invest in long puts and calls or sell puts and calls on an underlying reference instrument. Long straddle options may expire worthless.

Short straddle options expose the Fund to potentially large losses on sold puts and potentially unlimited losses on sold calls.

- *Swaps Risk.* The Fund may use swaps to enhance returns and manage risk. The Fund's use of swaps involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments and exposes the Fund to the risks associated with derivative instruments described above. In a standard “swap” transaction, two parties agree to exchange the returns, differentials in rates of return or some other amount earned or realized on the “notional amount” of predetermined investments or instruments, which may be adjusted for an interest factor. Swaps can involve greater risks than direct investment in securities because swaps may be leveraged and subject to counterparty risk (e.g., the risk of a counterparty’s defaulting on the obligation or bankruptcy), credit risk and pricing risk (i.e., swaps may be difficult to value). Swaps are also subject to non-correlation risk because they may not be perfect substitutes for the instruments they are intended to hedge or replace. Swaps may also be considered illiquid. It may not be possible for the Fund to liquidate a swap position at an advantageous time or price, which may result in significant losses.

Dividend Yield Risk. While the Fund may hold securities of companies that have historically paid a dividend, those companies may reduce or discontinue their dividends, thus reducing the yield of the Fund. Lower priced securities in the Fund may be more susceptible to these risks. Past dividend payments are not a guarantee of future dividend payments. Also, the market return of high dividend yield securities, in certain market conditions, may be worse than the market return of other investment strategies or the overall stock market.

Duration Risk. Longer-term securities may be more sensitive to interest rate changes, particularly in periods of rising interest rates. Effective duration estimates price changes for relatively small changes in rates. If rates rise significantly, effective duration may tend to understate the drop in a security’s price. If rates drop significantly, effective duration may tend to overstate the rise in a security’s price. Duration should not be confused with maturity. The maturity of a fixed income security is a measure of the amount of time left until the security “matures” or repays its face value. In contrast, duration measures the price sensitivity of a fixed income security to changes in interest rates rather than the amount of time remaining to maturity. Longer duration tends to result in greater volatility and a greater sensitivity to interest rate changes. For example, a five-year duration means that the fixed income security will decrease in value by 5% if interest rates rise 1% and increase in value by 5% if interest rates fall 1%.

Energy and Infrastructure Industry Risk. Companies in the energy and infrastructure industry are subject to many risks that can negatively impact the revenues and viability of companies in this industry. These risks include, but are not limited to, commodity price volatility risk, supply and demand risk, reserve and depletion risk, operations risk, regulatory risk, environmental risk, terrorism risk and the risk of natural disasters.

Energy Sector Risk. Risks of energy related securities include the risks that a decrease in the production of natural gas, natural gas liquids, crude oil, coal or other energy commodities or a decrease in the volume of such commodities available for transportation, mining, processing, storage, or distribution may adversely impact the financial performance of energy related securities. To maintain or grow their revenues, these companies need to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. The financial performance of energy related securities may be adversely affected if a Master Limited Partnership (“MLP”), or the companies to whom it provides the service, are unable to cost-effectively acquire additional reserves sufficient to replace the natural decline. Various governmental authorities have the power to enforce compliance with regulations and the permits issued under them, and violators are subject to administrative, civil, and criminal penalties, including civil fines, injunctions, or both. Stricter laws, regulations or enforcement policies could be enacted in the future which would likely increase compliance costs and may adversely affect the financial performance of energy related securities. The volatility of commodity prices, which may lead to a reduction in production or supply, may also negatively

impact the performance of energy related securities. Energy related securities are also subject to risks that are specific to the industry they serve. Energy related entities that provide crude oil, refined product, natural gas liquids and natural gas services are subject to supply and demand fluctuations in the markets they serve which will be impacted by a wide range of factors, including fluctuating commodity prices, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, and economic conditions, among others.

Exchange Traded Note (“ETN”) Risk. Similar to ETFs, owning an ETN generally reflects the risks of owning the assets that comprise the underlying market benchmark or strategy that the ETN is designed to reflect. ETNs also are subject to issuer and fixed income risk. In addition, ETNs are subject to counterparty risk, which is the risk that the broker-dealer or bank that issues the notes will not fulfill its contractual obligation to complete the transaction with the Fund. ETNs constitute general unsecured contractual obligations of the banks or broker-dealers that issue them, and the Fund is relying on the creditworthiness of such banks or broker-dealers. ETNs that are linked to market volatility are subject to default risk of the issuer; may not provide an effective hedge as historical correlation trends between the reference volatility index or measure and other asset classes may not continue or may reverse, limiting or eliminating any potential hedging effect; may become mispriced or improperly valued when compared to expectations and may not produce the desired investment results; may have tracking risk if the ETN does not move in step with its reference index; and may become illiquid.

Extension Risk. Extension risk is the risk that if interest rates rise, repayments of principal on certain debt securities, including, but not limited to, floating rate loans and mortgage-related securities, may occur at a slower rate than expected and the expected maturity of those securities could lengthen as a result. Securities that are subject to extension risk generally have a greater potential for loss when prevailing interest rates rise, which could cause their values to fall sharply.

Fixed Income Securities Risk. The value of the Fund’s fixed income securities will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the risk that the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the risk that the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund’s share price and total return to be reduced and fluctuate more than other types of investments.

Floating Rate Loans Risk. The Fund may invest in floating rate loans that are senior in the capital structure of the borrower or issuer, and that are secured with specific collateral. Loans that are senior and secured generally involve less risk than unsecured or subordinated debt and equity instruments of the same borrower because the payment of principal and interest on senior loans is an obligation of the borrower that, in most instances, takes precedence over the payment of dividends or the return of capital to the borrower’s shareholders, and payments to bond holders; and because of the collateral supporting the repayment of the debt instrument. However, the value of the collateral may not equal the Fund’s investment when the debt instrument is acquired or may decline below the principal amount of the debt instrument subsequent to the Fund’s investment. Also, to the extent that collateral consists of stocks of the borrower, or its subsidiaries or affiliates, the Fund bears the risk that the stocks may decline in value, be relatively illiquid or may lose all or substantially all of their value, causing the Fund’s investment to be under-collateralized. Therefore, the liquidation of the collateral underlying a floating rate loan in which the Fund has invested, may not satisfy the borrower’s obligation to the Fund in the event of non-payment of scheduled interest or principal, and the collateral may not be able to be readily liquidated.

In the event of the bankruptcy of a borrower or issuer, the Fund could experience delays and limitations on its ability to realize the benefits of the collateral securing the Fund's investment. Among the risks involved in a bankruptcy are assertions that the pledge of collateral to secure a loan constitutes a fraudulent conveyance or preferential transfer that would have the effect of nullifying or subordinating the Fund's rights to the collateral.

Floating rate loans are also subject to interest rate risk arising from changes in short-term market interest rates. If short-term market interest rates fall, the yield on the Fund's shares will also fall. Conversely, when short-term market interest rates rise, because of the lag between changes in such short-term rates and the resetting of the floating rates on the floating rate debt in the Fund's portfolio, the impact of rising rates will be delayed to the extent of such lag. The impact of market interest rate changes on the Fund's yield will also be affected by whether, and the extent to which, the floating rate debt in the Fund's portfolio is subject to floors on the base rate on which interest is calculated for such loans. So long as the base rate for a loan remains under the floor, changes in short-term interest rates will not affect the yield on such loans. In addition, to the extent that the interest rate spreads on floating rate debt in the Fund's portfolio experience a general decline, the yield on the Fund's shares will fall and the value of the Fund's assets may decrease, which will cause the Fund's net asset value to decrease.

The floating rate debt in which the Fund invests may be generally rated lower than investment-grade credit quality, i.e., rated lower than "Baa3" by Moody's Investors Service, Inc. ("Moody's") or "BBB-" by S&P Global Ratings ("S&P"), or have been made to borrowers who have issued debt securities that are rated lower than investment-grade in quality or, if unrated, would be rated lower than investment-grade credit quality. Investment decisions for the Fund will be based largely on the credit analysis performed by the Advisor, and not entirely on rating agency evaluation. This analysis may be difficult to perform. Information about a loan and its borrower generally is not in the public domain. Many borrowers have not issued securities to the public and are not subject to reporting requirements under federal securities laws. Generally, however, borrowers are required to provide financial information to lenders and information may be available from other loan market participants or agents that originate or administer loans.

Foreign Exchanges Risk. Derivatives trades may take place on foreign markets. Neither existing CFTC regulations nor regulations of any other U.S. governmental agency apply to transactions on foreign markets. Some of these foreign markets, in contrast to U.S. exchanges, are so-called principals' markets in which performance is the responsibility only of the individual counterparty with whom the trader has entered into a commodity interest transaction and not of the exchange or clearing corporation. In these kinds of markets, there is risk of bankruptcy or other failure or refusal to perform by the counterparty.

Forwards Risk. Foreign currency forward contracts are a type of derivative contract whereby the Fund may agree to buy or sell a country's or region's currency at a specific price on a specific date, usually 30, 60, or 90 days in the future. These contracts are subject to the risk of political and economic factors applicable to the countries issuing the underlying currencies and may fall in value due to foreign market downswings or foreign currency value fluctuations. Forward foreign currency contracts are individually negotiated and privately traded so they are dependent upon the creditworthiness of the counterparty and subject to counterparty risk. The Fund's investment or hedging strategies may not achieve their objective. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Derivative contracts ordinarily have leverage inherent in their terms and low margin deposits normally required in trading derivatives permit a high degree of leverage. Accordingly, a relatively small price movement may result in an immediate and substantial loss to the Fund. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations or to meet collateral segregation requirements. The use of leveraged derivatives can magnify the Fund's potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Growth Stock Risk. “Growth” stocks can react differently to issuer, political, market, and economic developments than the market as a whole and other types of stocks. “Growth” stocks also tend to be more expensive relative to their earnings or assets compared to other types of stocks. As a result, “growth” stocks tend to be sensitive to changes in their earnings and more volatile in price than the stock market as a whole. In addition, companies that the Advisor or Advisor believes have significant growth potential are often companies with new, limited, or cyclical product lines, markets or financial resources and the management of such companies may be dependent upon one or a few key people. The stocks of such companies can therefore be subject to more abrupt or erratic market movements than stocks of larger, more established companies or the stock market in general.

Income Risk. The Fund’s distributions to shareholders may decline when prevailing interest rates fall, when the Fund experiences deterioration of the underlying debt securities it holds, or when the Fund realizes a loss upon the sale of a debt security.

Index-Linked Derivative Securities Risk. If the derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index.

Inflation-Indexed Bond Risk. Inflation-indexed bonds are fixed income securities whose principal values are periodically adjusted according to a measure of inflation. If the index measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation indexed bonds. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal. With regard to municipal inflation-indexed bonds and certain corporate inflation-indexed bonds, the inflation adjustment is reflected in the semi-annual coupon payment. As a result, the principal value of municipal inflation-indexed bonds and such corporate inflation indexed bonds does not adjust according to the rate of inflation. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates are tied to the relationship between nominal interest rates and the rate of inflation. If nominal interest rates increase at a faster rate than inflation, real interest rates may rise, leading to a decrease in value of inflation-indexed bonds. Inflation-indexed bonds may cause a potential cash flow mismatch to investors because an increase in the principal amount of an inflation-indexed bond will be treated as interest income currently subject to tax at ordinary income rates even though investors will not receive repayment of principal until maturity. If the Fund invests in such bonds, it will be required to distribute such interest income in order to qualify for treatment as a regulated investment company and eliminate the Fund-level tax, without a corresponding receipt of cash, and therefore may be required to dispose of portfolio securities at a time when it may not be desirable.

Inflation Protected Securities Risk. Inflation-protected debt securities tend to react to changes in real interest rates. Real interest rates represent nominal (stated) interest rates reduced by the expected impact of inflation. In general, the price of an inflation-protected debt security can fall when real interest rates rise and can rise when real interest rates fall. Interest payments on inflation-protected debt securities can be unpredictable and will vary as the principal and/or interest is adjusted for inflation.

Interest Rate Risk. Interest rate risk is the risk that bond prices overall, including the prices of securities held by the Fund, will decline over short or even long periods of time due to rising interest rates. Bonds with longer maturities tend to be more sensitive to interest rates than bonds with shorter maturities. For example, if interest rates go up by 1.0%, the price of a 4% coupon bond will decrease by approximately 1.0% for a bond with 1 year to maturity and approximately 4.4% for a bond with 5 years to maturity. The maturity and effective duration of the Fund’s investment portfolio may vary materially, from time to time, and there is no assurance that the Fund will achieve or maintain any particular target maturity or effective duration of its investment portfolio.

Investment Style Risk. The particular type of investments in which the Fund focuses (such as large-capitalization stocks or growth stocks) may underperform other asset classes or the overall market. Individual market segments such as the large-cap, mid-cap and small-cap U.S. equity market segments tend to go through cycles of performing better or worse than other types of securities. These periods may last as long as several years. Additionally, a particular market segment could fall out of favor with investors, causing the Fund that focuses on that market segment to underperform those that favor other kinds of securities.

Junk Bond Risk. Lower-quality bonds, known as “high yield” or “junk” bonds are considered to be speculative with respect to the issuer’s ability to pay interest and principal when due and present a significant risk for loss of principal and interest. These bonds offer the potential for higher return, but also involve greater risk than bonds of higher quality, including an increased possibility that the bond’s issuer, obligor, or guarantor may not be able to make its payments of interest and principal (credit quality risk). If that happens, the value of the bond may decrease, and the Fund’s share price may decrease, and its income distribution may be reduced. An economic downturn or period of rising interest rates (interest rate risk) could adversely affect the market for these bonds and reduce the Fund’s ability to sell the bonds in its portfolio (liquidity risk). Such securities may also include “Rule 144A” securities, which are subject to resale restrictions. The lack of a liquid market for these bonds could decrease the value of the Fund’s portfolio and net asset value per share.

Liquidity Risk. Liquidity risk exists when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations. Liquid securities can become illiquid due to political, economic or issuer specific events; supply/demand imbalances; changes in a specific market’s size or structure, including the number of participants; or overall market disruptions.

Litigation Risk. The Fund may be named in a lawsuit despite no wrongdoing by the Fund, its Advisor or any other service provider to the Fund. The defense of a lawsuit may detrimentally impact the Fund and its shareholders, including incurring legal defense cost, regulatory costs, and increased insurance premiums.

Loan Risk. Investments in bank loans may subject the Fund to heightened credit risks because such loans tend to be highly leveraged and potentially more susceptible to the risks of interest deferral, default and/or bankruptcy. Senior floating rate loans are often rated below investment grade but may also be unrated. The risks associated with these loans can be similar to the risks of below investment grade fixed income instruments. An economic downturn would generally lead to a higher non-payment rate, and a senior floating rate loan may lose significant market value before a default occurs. Moreover, any specific collateral used to secure a senior floating rate loan may decline in value or become illiquid, which would adversely affect the loan’s value. Unlike the securities markets, there is no central clearinghouse for loan trades, and the loan market has not established enforceable settlement standards or remedies for failure to settle. Therefore, portfolio transactions in loans may have uncertain settlement time periods. Senior floating rate loans are subject to a number of risks described elsewhere in this Prospectus, including liquidity risk and the risk of investing in below-investment grade fixed income instruments.

Machinery and Electrical Equipment Industry Risk. The machinery and electrical equipment industries can be significantly affected by general economic trends, including employment, economic growth, and interest rates; changes in consumer sentiment and spending; overall capital spending levels, which are influenced by an individual company’s profitability and broader factors such as interest rates and foreign competition; commodity prices; technical obsolescence; labor relations legislation; government regulation and spending; import controls; and worldwide competition. Companies in these industries also can be adversely affected by liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution control.

Market Volatility-Linked ETFs Risk. ETFs that are linked to market volatility have the risks associated with investing in futures.

Mortgage-Backed Securities (“MBS”) and Collateralized Mortgage-Backed Obligations (“CMO”) Risk. MBS and CMOs are subject to credit risk because underlying loan borrowers may default. MBS and CMO default rates tend to be sensitive to overall economic conditions and to localized property vacancy rates and prices. Borrower default rates may be significantly higher than estimated. Certain individual securities may be more sensitive to default rates because payments may be subordinated to other securities of the same issuer. The Advisor’s assessment, or a rating agency’s assessment, of borrower credit quality, default rates and loss rates may prove to be overly optimistic. Additionally, MBS and CMOs are subject to prepayment risk because the underlying loans held by the issuers may be paid off prior to maturity at faster or lower rates than expected. The value of these securities may go down as a result of changes in prepayment rates on the underlying mortgages or loans. During periods of declining interest rates, prepayment rates usually increases, and the Fund may have to reinvest prepayment proceeds at a lower interest rate. CMOs may be less susceptible to this risk because payment priorities within the CMO may have the effect of a prepayment lock out period.

Micro Capitalization Company Risk. Micro capitalization companies may be newly formed or have limited product lines, distribution channels and financial and managerial resources. The risks associated with those investments are generally greater than those associated with investments in the securities of larger, more established companies. This may cause the Fund’s net asset value to be more volatile when compared to investment companies that focus only on large capitalization companies.

Generally, securities of micro capitalization companies are more likely to experience sharper swings in market value and generally are more volatile than larger companies. Micro capitalization companies may trade in less liquid markets in which it may be more difficult for the Advisor to sell at times and at prices that the Advisor believes appropriate. Compared to large companies, micro capitalization companies are more likely to have (i) less information publicly available, (ii) more limited product lines or markets and less mature businesses, (iii) fewer capital resources, (iv) more limited management depth and (v) shorter operating histories. Further, the equity securities of micro capitalization companies are often traded over the counter and generally experience a lower trading volume than is typical for securities that are traded on a national securities exchange. Consequently, the Fund may be required to dispose of these securities over a longer period of time (and potentially at less favorable prices) than would be the case for securities of larger companies, offering greater potential for gains and losses and associated tax consequences.

MLP and MLP-Related Securities Risk. Investments in MLPs and MLP-related securities involve risks different from those of investing in common stock including risks related to limited control and limited rights to vote on matters affecting the MLP or MLP-related security, risks related to potential conflicts of interest between an MLP and the MLP’s general partner, cash flow risks, dilution risks (which could occur if the MLP raises capital and then invests it in projects whose return fails to exceed the cost of capital raised) and risks related to the general partner’s limited call right. MLPs and MLP-related securities are generally considered interest-rate sensitive investments. During periods of interest rate volatility, these investments may not provide attractive returns. Depending on the state of interest rates in general, the use of MLPs or MLP-related securities could enhance or harm the overall performance of the Fund.

MLPs do not pay U.S. federal income tax at the partnership level, subject to the application of certain partnership audit rules. Instead, each partner is allocated a share of the partnership’s income, gains, losses, deductions, and expenses. A change in current tax law or in the underlying business mix of a given MLP could result in an MLP being treated as a corporation for U.S. federal income tax purposes, which would result in such MLP being required to pay U.S. federal income tax on its taxable income. The classification of an MLP as a corporation for U.S. federal income tax purposes would have the effect of reducing the amount of cash available for distribution by the MLP. Thus, if any of the MLPs owned by the Fund were treated as corporations for U.S. federal income tax purposes, it

could result in a reduction of the value of your investment in the Fund and lower income, as compared to an MLP that is not taxed as a corporation.

Mortgage-Backed Securities Risk. Mortgage-backed securities represent participating interests in pools of residential mortgage loans, some of which are guaranteed by the U.S. government, its agencies, or instrumentalities. However, the guarantee of these types of securities relates to the principal and interest payments and not the market value of such securities. In addition, the guarantee only relates to the mortgage-backed securities held by the Fund and not the purchase of shares of the Fund.

Mortgage-backed securities do not have a fixed maturity and their expected maturities may vary when interest rates rise or fall. An increased rate of prepayments on the Fund's mortgage-backed securities will result in an unforeseen loss of interest income to the Fund as the Fund may be required to reinvest assets at a lower interest rate. A decreased rate of prepayments lengthens the expected maturity of a mortgage-backed security, causing the price of the mortgage-backed securities and the Fund's net asset value per share to fall and making the mortgage-backed securities more sensitive to interest rate changes. The prices of mortgage-backed securities may decrease more than prices of other fixed-income securities when interest rates rise. An unexpectedly high rate of defaults on the mortgages held by a mortgage pool will adversely affect the value of mortgage-backed securities and will result in losses to the Fund. The liquidity of mortgage-backed securities, and particularly non-agency non-investment grade mortgage-backed securities, may change over time. Mortgage-backed securities and other securities issued by participants in housing and commercial real estate finance, as well as other real estate-related markets have experienced extraordinary weakness and volatility in certain years.

Mortgage-backed securities issued or guaranteed by private issuers are also known as "non-agency mortgage-backed securities." Non-agency mortgage-backed securities are not subject to the same underwriting requirements as those with government or government-sponsored entity guarantees and, therefore, mortgage loans underlying privately issued mortgage-related securities may have less favorable collateral, credit risk or other underwriting characteristics, and wider variances in interest rate, term, size, purpose, and borrower characteristics. The market for non-agency mortgage-backed securities is smaller and less liquid than the market for government-issued mortgage-backed securities.

Lower-quality notes, such as those considered "sub-prime" are more likely to default than those considered "prime" by a rating evaluation agency or service provider. An economic downturn or period of rising interest rates could adversely affect the market for sub-prime notes and reduce the Fund's ability to sell these securities. The lack of a liquid market for these securities could decrease the Fund's share price. Additionally, borrowers may seek bankruptcy protection which would delay resolution of security holder claims and may eliminate or materially reduce liquidity.

Municipal Bond Risk. The value of municipal bonds that depend on a specific revenue source or general revenue source to fund their payment obligations may fluctuate as a result of changes in the cash flows generated by the revenue source(s) or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source(s). In addition, changes in federal tax laws or the activity of an issuer may adversely affect the tax-exempt status of municipal bonds. There is no guarantee that a municipality will be able to pay interest or repay principal. In addition, the ability of an issuer to make payments or repay interest may be affected by litigation or bankruptcy. In the event of such an issuer's bankruptcy, the Fund could experience delays in collecting principal and interest, and may not, in all circumstances, be able to collect all principal and interest to which it is entitled. To enforce its rights in the event of a default in the payment of interest or repayment of principal, or both, a debt holder may, in some instances, take possession of, and manage, the assets securing the issuer's obligations on such securities, which may increase the Fund's operating expenses. Any income derived from the Fund's ownership or operation of such assets may not be tax-exempt. Municipal bonds are generally subject to interest rate, credit and market risk.

Because many municipal bonds are issued to finance similar projects (such as those relating to education, health care, housing, transportation, and utilities), conditions in those sectors may affect the overall municipal securities market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market. Municipal bonds backed by current or anticipated revenues from a specific project or specific assets can be negatively affected by the discontinuance of the supporting taxation or the inability to collect revenues for the specific project or specific assets. Municipal bonds are subject to the risk that the Internal Revenue Service (the “IRS”) may determine that an issuer has not complied with applicable tax requirements and that interest from the municipal bond is taxable, which may result in a significant decline in the value of the security. Municipal bonds may be less liquid than taxable bonds and there may be less publicly available information on the financial condition of municipal bond issuers than for issuers of other securities, and the investment performance of the Fund may, therefore, be more dependent on the analytical abilities of the Advisor than if the Fund held other types of investments. The secondary market for municipal bonds also tends to be less well-developed or liquid than many other securities markets, a by-product of lower capital commitments to the asset class by the dealer community, which may adversely affect the Fund’s ability to sell municipal bonds at attractive prices or value municipal bonds.

Over-the-Counter (“OTC”) Trading Risk. Certain of the derivatives in which the Fund may invest may be traded (and privately negotiated) in the OTC market. While the OTC derivatives market is the primary trading venue for many derivatives, it is largely unregulated. As a result, and similar to other privately negotiated contracts, the Fund is subject to counterparty credit risk with respect to such derivative contracts.

Preferred Stock Risk. The value of preferred stocks will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of preferred stock. Preferred stocks are also subject to credit risk, which is the possibility that an issuer of preferred stock will fail to make its dividend payments. Preferred stock prices tend to move more slowly upwards than common stock prices. In an issuer bankruptcy, preferred stockholders are subordinate to the claims of debtholders and may receive little or no recovery.

Prepayment Risk. The Fund may invest in debt securities that may be paid off early when the issuer of a debt security can repay the principal prior to a security’s maturity. If interest rates are falling, the Fund may have to reinvest the unanticipated proceeds at lower interest rates, resulting in a decline in the Fund’s income.

Real Estate and REIT Risk. The Fund is subject to the risks of the real estate market as a whole, such as taxation, regulations and economic and political factors that negatively impact the real estate market and the direct ownership of real estate. These may include decreases in real estate values, overbuilding, rising operating costs, interest rates and property taxes. In addition, some real estate related investments are not fully diversified and are subject to the risks associated with financing a limited number of projects.

Investing in REITs involves certain unique risks in addition to those associated with the real estate sector generally. REITs whose underlying properties are concentrated in a particular industry or region are also subject to risks affecting such industries and regions. REITs (especially mortgage REITs) are also subject to interest rate risks. By investing in REITs through the Fund, a shareholder will bear the expenses of the REITs in addition to Fund expenses. An entity that fails to qualify as a REIT would be subject to a corporate level tax, would not be entitled to a deduction for dividends paid to its shareholders and would not pass through to its shareholders the character of income earned by the entity.

Regulatory Risk. Regulatory authorities in the United States or other countries may adopt rules that restrict the ability of the Fund to fully implement its strategy, either generally, or with respect to certain securities, industries, or countries, which may impact the Fund’s ability to fully implement its investment strategies. Regulators may interpret rules differently than the Fund or the mutual fund industry generally, and disputes over such interpretations can increase legal expenses incurred by the Fund.

Repurchase and Reverse Repurchase Agreements Risk. The Fund may enter into repurchase agreements in which it purchases a security (known as the “underlying security”) from a securities dealer or bank. In the event of bankruptcy or other default by the seller of a repurchase agreement, the Fund could experience delays in liquidating the underlying security. The Fund may also experience losses in the event of a decline in the value of the underlying security while the Fund is seeking to enforce its rights under the repurchase agreement. Reverse repurchase agreements involve the sale of securities held by the Fund with an agreement to repurchase the securities at an agreed-upon price, date and interest payment, and involve the risk that (i) the other party may fail to return the securities in a timely manner, or at all, and (ii) the market value of assets that are required to be repurchased decline below the purchase price of the asset that has to be sold, resulting in losses to the Fund.

Restricted Securities Risk. The Fund may hold securities that are restricted as to resale under the U.S. federal securities laws. There can be no assurance that a trading market will exist at any time for any particular restricted security. Limitations on the resale of these securities may prevent the Fund from disposing of them promptly at reasonable prices or at all. The Fund may have to bear the expense of registering the securities for resale and the risk of substantial delays in effecting the registration. Also, restricted securities may be difficult to value because market quotations may not be readily available, and the values of restricted securities may have significant volatility.

Risk Management Risk. The measures that the Advisor or portfolio manager use to monitor and manage the risks of the Fund may not accomplish the intended results and the Fund may experience losses significantly greater than expected.

Sector Concentration Risk. Sector concentration risk is the possibility that securities within the same sector will decline in price due to sector-specific market or economic developments. If the Fund invests more heavily in a particular sector, the value of its shares may be especially sensitive to factors and economic risks that specifically affect that sector. As a result, the Fund’s share price may fluctuate more widely than the value of shares of a mutual fund that invests in a broader range of sectors. Additionally, some sectors could be subject to greater government regulation than other sectors. Therefore, changes in regulatory policies for those sectors may have a material effect on the value of securities issued by companies in those sectors.

Security Risk. The value of the Fund may decrease in response to the activities and financial prospects of an individual security in the Fund’s portfolio. The net asset value or market price of the Fund will fluctuate based on changes in the value of the securities in which the Fund invests. The Fund may invest in securities that may be more volatile and carry more risk than some other forms of investment. The price of securities may rise or fall because of economic or political changes. Security prices in general may decline over short or even extended periods of time. Market prices of securities in broad market segments may be adversely affected by a prominent issuer having experienced losses, lack of earnings, failure to meet the market’s expectations with respect to new products or services, or even by factors wholly unrelated to the value or condition of the issuer, such as changes in interest rates.

Short Selling Risk. If a security or other instrument sold short increases in price, the Fund may have to cover its short position at a higher price than the short sale price, resulting in a loss. The Fund may have substantial short security positions and must borrow those securities to make delivery to the buyer. The Fund may not be able to borrow a security that it needs to deliver, or it may not be able to close out a short position at an acceptable price and may have to sell related long positions before it had intended to do so. Thus, the Fund may not be able to successfully implement its short sale strategy due to limited availability of desired securities or for other reasons.

The Fund also may be required to pay a commission and other transaction costs, which would increase the cost of the security sold short. The amount of any gain will be decreased, and the amount of any loss increased, by the amount of the commission, dividends, interest, or expenses the Fund may be required to pay in connection with the short sale.

Because losses on short sales arise from increases in the value of the security sold short, such losses are theoretically unlimited. By contrast, a loss on a long position arises from decreases in the value of the security and is limited by the fact that a security's value cannot go below zero.

Sovereign Debt Risk. The issuer of foreign debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due, and the Fund may have limited recourse in the event of a default. The market prices of sovereign debt, and the Fund's net asset value, may be more volatile than prices of U.S. debt obligations and certain emerging markets may encounter difficulties in servicing their debt obligations.

Structured Note Risk. The Fund may seek investment exposure to sectors through structured notes that may be exchange traded or may trade in the over-the-counter market. These notes are typically issued by banks or brokerage firms and have interest and/or principal payments which are linked to changes in the price level of certain assets or to the price performance of certain indices. The value of a structured note will be influenced by time to maturity, level of supply and demand for this type of note, interest rate and market volatility, changes in the issuer's credit quality rating, and economic, legal, political, events that affect the industry, and adverse changes in the index or reference asset to which the payments are linked. In addition, there may be a lag between a change in the value of the underlying reference asset and the value of the structured note. Structured notes may also be subject to counterparty risk. The Fund may also be exposed to increased transaction costs when it seeks to sell such notes in the secondary market.

Sub-Prime Mortgage Risk. Lower-quality notes, such as those considered "sub-prime" are more likely to default than those considered "prime" by a rating evaluation agency or service provider. An economic downturn or period of rising interest rates could adversely affect the market for sub-prime notes and reduce the Fund's ability to sell these securities. The lack of a liquid market for these securities could decrease the Fund's share price. Additionally, borrowers may seek bankruptcy protection which would delay resolution of security holder claims and may eliminate or materially reduce liquidity.

Technology Sector Risk. Technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Technology companies may have limited product lines, markets, financial resources, or personnel. The products of technology companies may face obsolescence due to rapid technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the technology sector are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies.

Underlying Fund Risk. Other investment companies including mutual funds, ETFs, and closed-end funds ("Underlying Funds") in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the Underlying Funds and may be higher than other mutual funds that invest directly in stocks and bonds. In addition, when the Fund invests in Underlying Funds, there is a risk that the investment advisers of those Underlying Funds may make investment decisions that are detrimental to the performance of the Fund. Each of the Underlying Funds is subject to its own specific risks, but the Advisor expects the principal investments risks of such Underlying Funds will be similar to the risks of investing in the Fund. Additional risks of investing in the Underlying Funds are described below:

- *Closed-End Fund Risk.* Closed-end funds are also subject to management risk because the adviser to the underlying closed-end fund may be unsuccessful in meeting the fund's investment objective. Closed-end funds may trade at a discount or premium to their net asset value and may trade at a larger discount or smaller premium subsequent to purchase by the Fund. Since closed-end funds trade on exchanges, the Fund will also incur brokerage expenses and commissions when it buys or sells closed-end fund shares.

- *ETF Tracking Risk.* Index-based or “passive” ETFs, which seek to track the performance of an underlying index, will not be able to replicate exactly the performance of the indices they track because the total return generated by the securities will be reduced by transaction costs incurred in adjusting the actual balance of the securities. In addition, passive ETFs will incur expenses not incurred by their applicable indices. Certain securities comprising the indices tracked by the passive ETFs may, from time to time, temporarily be unavailable, which may further impede the ETFs’ ability to track their applicable indices.
- *Inverse Correlation Risk.* Underlying Funds that are inverse funds should lose value as the index or security tracked by such fund’s benchmark increases in value; a result that is the opposite from traditional mutual funds. Successful use of inverse funds requires that the fund’s adviser correctly predict short term market movements. If the Fund invests in an inverse fund and markets rise, the Fund could lose money. Inverse funds may also employ leverage such that their returns are more than one times that of their benchmark.
- *Inverse ETF and ETN Risk.* Investing in inverse ETFs and ETNs may result in increased volatility due to the ETF’s or ETN’s possible use of short sales of securities and derivatives such as options and futures. The use of leverage by an ETF or ETN increases risk to the Fund. The more the Fund invests in leveraged instruments, the more the leverage will magnify any gains or losses on those investments. During periods of increased volatility, inverse ETFs and ETNs may not perform in the manner they are designed.
- *Leveraged ETF Risk.* Investing in leveraged ETFs will amplify the Fund’s gains and losses. Most leveraged ETFs “reset” daily. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance of their underlying index or benchmark during the same period of time.
- *Mutual Fund Risk.* Mutual funds are subject to management risk because the adviser to the mutual fund may be unsuccessful in meeting the fund’s investment objective and may temporarily pursue strategies which are inconsistent with the investment objective of the Fund.
- *Net Asset Value and Market Price Risk.* The market value of ETF shares may differ from their net asset value. This difference in price may be due to the fact that the supply and demand in the market for fund shares at any point in time is not always identical to the supply and demand in the market for the underlying basket of securities. Accordingly, there may be times when shares trade at a premium or discount to net asset value.
- *Strategies Risk.* Each Underlying Fund is subject to specific risks, depending on the nature of the fund. These risks could include liquidity risk, sector risk, and foreign currency risk, as well as risks associated with fixed income securities and commodities.

Volatility Risk. The Fund may have investments that appreciate or decrease significantly in value of short periods of time. This may cause the Fund’s net asset value and market price per share to experience significant increases or declines in value over short periods of time, however, all investments, long-term or short-term are subject to risk of loss.

SHAREHOLDER INFORMATION

Purchasing and Selling Fund Shares on the Secondary Market

General. Most investors will buy and sell shares of the Fund in secondary market transactions through their financial institution. Shares of the Fund will be listed for trading in the secondary market on the Exchange. The Exchange is currently open for business each day other than weekends and the following national holidays: New Year’s Day,

Martin Luther King Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

The Fund's shares trade on the Exchange under the following symbol:

<u>Fund</u>	<u>Symbol</u>
Strategy Shares Newfound/ReSolve Robust Momentum ETF	ROMO

Shares of the Fund can be bought and sold throughout the trading day at their market price like other publicly traded equity securities. If you purchase shares of the Fund in the secondary market, there is no minimum investment. While shares of the Fund will typically be purchased and sold in the secondary market in "round lots" of 100 shares, your financial institution may permit you to purchase or sell shares in smaller "odd-lots" at no per-share price differential. When purchasing or selling Fund shares through your financial institution, you will pay customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and offer price in the secondary market.

The market price of Fund shares may be below (at a discount), at, or above (at a premium) their most recently calculated NAV and can be affected by market forces of supply and demand for the Fund's shares, the prices of the Fund's portfolio securities, economic conditions, and other factors.

Purchasing Shares from and Redeeming Shares with the Fund

General. On each Business Day, you may purchase shares directly from the Fund, and you may tender shares for redemption directly to the Fund in a Creation Unit or multiples thereof. Each Creation Unit is currently comprised of 25,000 shares. The number of shares comprising a Creation Unit may change over time. Once "created," shares of the Fund will generally trade in the secondary market in amounts less than a Creation Unit (see "Shareholder Information – Purchasing and Selling Fund Shares on the Secondary Market").

To purchase or redeem Creation Units of the Fund, you must be an Authorized Participant, or you must purchase or redeem the shares through a financial institution that is an Authorized Participant. The Distributor will provide a list of Authorized Participants upon request.

The Fund processes orders for the purchase and redemption of Creation Units at the NAV next calculated after an order has been received in proper form by the Distributor.

Except where the purchase or redemption will include cash under certain circumstances, investors will generally be required to purchase Creation Units by making an in-kind deposit of specified instruments ("Deposit Instruments"), and shareholders redeeming Creation Units will generally receive an in-kind transfer of specified instruments ("Redemption Instruments"). The name and quantities of the instruments that constitute the Fund's Deposit Instruments and the names and quantities of the instruments that constitute the Fund's Redemption Instruments will be specified by the Fund each day, and these instruments are referred to, in the case of either a purchase or a redemption, as the "Creation Basket." If there is a difference between the net asset value attributable to a Creation Unit and the aggregate market value of the Creation Basket exchanged for the Creation Unit, the party conveying instruments with the lower value will also pay to the other an amount in cash equal to that difference.

The Fund generally does not offer or sell its shares outside of the U.S. Also, the Fund reserves the right to reject any purchase request at any time, for any reason, and without notice.

Additional information regarding the purchase and redemption of the Fund's Creation Units may be found in the "Purchase and Redemption of Creation Units" section of the Statement of Additional Information ("SAI").

Continuous Offering. Because new shares may be created and issued on an ongoing basis during the life of the Fund, a “distribution,” as such term is used in the Securities Act of 1933 (“1933 Act”), may be occurring. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner that could render them statutory underwriters and subject to the prospectus delivery and liability provisions of the 1933 Act. Any determination of whether one is an underwriter must take into account all the relevant facts and circumstances of each particular case.

Broker-dealers should also note that dealers who are not “underwriters” but are participating in a distribution (as compared to ordinary secondary market transactions), and thus dealing with shares that are part of an “unsold allotment” within the meaning of Section 4(3)(C) of the 1933 Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the 1933 Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the 1933 Act is available only with respect to transactions on a national securities exchange.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The DTC, or its nominee, will be the record owner or registered owner of all outstanding shares of the Fund and is recognized as the owner of all such shares. Your beneficial interest in the shares of the Fund will be reflected on the records of the DTC or its participants. Participants in the DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with the DTC. As a beneficial owner of shares of the Fund, you are not entitled to receive physical delivery of stock certificates or to have shares of the Fund registered in your name, and you are not considered a registered owner of those shares. Therefore, to exercise any right as an owner of Fund shares, you must rely on the procedures of the DTC and its participants. These procedures are the same as those that apply to any other stocks that you hold in book entry or “street name” form through your financial institution.

Purchase of Shares by Investment Companies

Rule 12d1-4 under the Investment Company Act of 1940, as amended (the “1940 Act”), permits registered investment companies and unit investment trusts that enter into an agreement with Strategy Shares, of which the Fund is a series (the “Trust”), (“Investing Funds”) to invest in series of the Trust beyond the limits set forth in Section 12(d)(1) of the 1940 Act subject to certain terms and conditions. This aspect of Rule 12d1-4 is not applicable to the Fund. Accordingly, Investing Funds must adhere to the limits set forth in Section 12(d)(1) of the 1940 Act when investing in the Fund.

Calculation of Net Asset Value

The Fund’s NAV is determined by dividing the total value of the Fund’s portfolio investments and other assets, less any liabilities, by the total number of shares outstanding as of the close of regular trading on the Exchange (normally 4:00 p.m., Eastern Time) on each day that the Exchange is open for business. Since the Fund may invest a portion of its investment portfolio in foreign securities that trade on weekends or other days that the Fund does not price its shares, the NAV of the Fund may change on days when shareholders will not be able to purchase or redeem Creation Units.

In computing the NAV for the Fund, current market value is used to value portfolio securities with respect to which market quotations are readily available, except short-term investments with remaining maturities of 60 days or less which are valued at amortized cost. Pursuant to Board-approved policies, the Fund relies on certain security pricing services to provide current market value of securities.

Securities for which market quotations are not readily available are valued at their “fair value” pursuant to Board-approved procedures. Market quotations may not be readily available if: (1) a portfolio security is not traded in a public market or the principal market in which the security trades are closed; (2) trading in a portfolio security is suspended and not resumed prior to the normal market close; (3) a portfolio security is not traded in significant volume for a substantial period; (4) the value of a portfolio security has been materially affected by events occurring after the close of the market on which the security is principally traded, or (5) the Advisor determines that the quotation or price for a portfolio security provided by an independent pricing source is inaccurate. The securities of smaller companies in which the Fund may invest may be susceptible to fair valuation since these securities may be thinly traded and less liquid than their larger counterparts. Similarly, the Fund’s investments in foreign securities, if any, are more likely to require a fair value determination because, among other things, events may occur between the closure of the foreign market and the time that the Fund calculates its NAV that affect the reported market value of these securities.

There can be no assurance that the Fund could purchase or sell a portfolio security at the price used to calculate the Fund’s NAV. In the case of fair valued portfolio securities, lack of information and uncertainty as to the significance of information may lead to a conclusion that a prior valuation is the best indication of a portfolio security’s present value. Fair valuations generally remain unchanged until new information becomes available. Consequently, changes in the fair valuation of portfolio securities may be less frequent and of greater magnitude than changes in the price of portfolio securities valued at their last sale price by an independent pricing service or based on market quotations. Fair valuation determinations often involve the consideration of a number of subjective factors, and the fair value price may be higher or lower than a readily available market quotation. Use of fair value prices and certain current market valuations could result in a difference between the prices used to calculate the Fund’s NAV and the prices used by the underlying Index, which, in turn, could result in a difference between the Fund’s performance and the performance of the underlying Index and introduce tracking error.

Frequent Purchases and Sales of Fund Shares

The Board has not adopted policies and procedures with respect to frequent purchases and sales of Fund shares. Frequent purchases and sales of the Fund’s shares in the secondary market are not expected to subject the Fund to the harmful effects of market timing and excessive trading such as dilution, the disruption of portfolio management, an increase in portfolio trading costs, and/or the realization of capital gains since these transactions do not involve the Fund directly. It is not anticipated that these effects will materialize as a result of the issuance and redemption of Creation Units by the Fund since these transactions will generally be processed on an in-kind basis (that is for a basket of portfolio securities and not for cash). Transaction fees will be imposed on purchases and redemptions of Creation Units, which are intended to offset custodial and other costs to the Fund incurred in processing the transactions in-kind. To the extent that the Fund permits the purchase or redemption of Creation Units in part or wholly in cash, higher transaction fees will be imposed, which are intended to offset the Fund’s increased trading costs to purchase or redeem portfolio securities in connection these transactions.

Portfolio Holdings Information

A description of the Fund’s policies and procedures with respect to the disclosure of portfolio securities is available in the SAI.

DISTRIBUTION OF THE FUND

The Fund has adopted but has yet to implement a Rule 12b-1 Distribution Plan (the “Plan”), pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No Rule 12b-1 fees are currently paid by the Fund, and there are no plans to impose these fees. However, in the event that Rule 12b-1 fees are charged in the future, because such fees are paid out of the Fund's assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

Additional Payments to Financial Intermediaries

The Advisor and its affiliates may pay, out of their own profits and reasonable resources, amounts (including items of material value) to certain financial intermediaries for the sale of Fund shares or related services. The amounts of these payments could be significant and may create an incentive for the financial intermediaries or their employees or associated persons to recommend or sell Fund shares to you. These payments are not reflected in the fees and expenses listed in the fee table section of this Prospectus because they are not paid by the Fund.

These payments are negotiated and may be based on such factors as the number or value of Fund shares that the financial intermediary sells or may sell; the value of client assets invested; or the type and nature of services or support furnished by the financial intermediary. These payments may be in addition to payments made by the Fund to a financial intermediary under the Plan, if implemented. Ask your financial intermediary for information about any payments it receives from the Advisor, its affiliates, or the Fund and any services the financial intermediary provides to the Fund. The SAI contains additional information on the types of additional payments that may be paid.

MANAGEMENT OF THE FUND

Investment Advisor

Rational Advisors, Inc has been retained by the Trust under a Management Agreement to act as the investment advisor to the Fund subject to the authority of the Board of Trustees. Management of mutual funds is currently its primary business. The Advisor is under common control with Catalyst Capital Advisors, LLC ("Catalyst") and AlphaCentric Advisors LLC, the investment advisors of other funds in the same group of investment companies also known as a "Fund Complex." Information regarding the funds in the Fund Complex can be found at <http://intelligentalts.com>. The Advisor oversees the day-to-day investment decisions for the Fund and continuously reviews, supervises and administers the Fund's investment program. MFund Services, LLC, an affiliate of the Advisor provides the Funds with management and legal administrative support, and compliance services. The address of the Advisor is 53 Palmeras St. Suite 601, San Juan, PR 00901.

A discussion of the Trustees' renewal of the Advisor's investment advisory agreement with the Trust is available in the Fund's annual report to shareholders for the fiscal year ended April 30, 2023.

Portfolio Managers

David Miller and Charles Ashley are jointly and primarily responsible for the day-to-day management of the Fund. Mr. Miller is the Lead Portfolio Manager of the Fund.

David Miller, Owner, Chief Investment Officer ("CIO"), and Senior Portfolio Manager of the Advisor since 2016, has served as a Portfolio Manager of the Fund since 2018. He is also the CIO of Catalyst since 2006. He co-founded Catalyst in 2006 and is responsible for the day-to-day management of several funds managed by Catalyst. Mr. Miller is also a member of Catalyst International Advisors LLC since 2019, Insights Media LLC since 2019, and Catalyst Insurance Corporation II from 2018 to 2021. He received a BS in Economics from the University of Pennsylvania, Wharton School and a MBA in Finance from the University of Michigan, Ross School of Business.

Charles Ashley, Portfolio Manager of the Advisor since 2019, has served as a Portfolio Manager of the Fund since September 2022. Mr. Ashley joined Rational in February 2016 as a senior analyst to provide investment research and assist with the day-to-day management of several mutual funds. He has also served as a portfolio manager at Catalyst since 2017 and joined Catalyst as a senior analyst in February 2016. Mr. Ashley has an MBA from the University of Michigan Ross School of Business and a B. A. from the Michigan State University Eli Broad College of Business.

The SAI provides additional information about the portfolio managers' compensation, management of other accounts, and ownership of securities in the Fund.

Manager-of-Managers Order

An affiliate of the Advisor has received an exemptive order (the "Order") from the SEC that permits the Advisor, with the Trust's Board of Trustees' approval, to enter into or materially amend sub-advisory agreements with one or more sub-advisers who are not affiliated with the Advisor without obtaining shareholder approval. Shareholders will be notified if and when a new sub-adviser is employed by the Advisor within 90 days of such change.

Fees Paid to Advisor

The Advisor and its affiliates provide the Fund with advisory, management and legal administrative support services.

Advisory Services

The Fund pays the Advisor management fees as a percentage of average daily net assets for its services as investment advisor as follows:

<u>Fund</u>	<u>Annual Rate</u>
Strategy Shares Newfound/ReSolve Robust Momentum ETF	0.49%

The Advisor has contractually agreed to reduce its fees and/or reimburse the Fund's expenses (excluding acquired fund fees and expenses; (ii) brokerage commissions and trading costs; (iii) interest (including borrowing costs and overdraft charges); (iv) taxes; (v) short sale dividends and interest expenses; and (vi) non-routine or extraordinary expenses, such as regulatory inquiry and litigation expenses) in order to limit Total Annual Fund Operating Expenses After Fee Waiver/Expense Reimbursement of the Fund to 0.75% of the Fund's average annual daily net assets ("Expense Cap"). The Expense Cap will remain in effect until at least August 31, 2024. The Expense Cap may be terminated earlier only upon the approval of the Board. The Advisor may recoup management fees that it waived or Fund expenses that it paid under this agreement for a period of up to three years from the date the fees were waived and/or expenses paid, provided such recoupment can be achieved without causing the expense ratio (after the recoupment is taken into account) to exceed (i) the expense limit in effect at the time the fees were waived or expenses paid, or (ii) the expense limit in place at the time of the recapture. For the fiscal year ended April 30, 2023, the Advisor received a management fee after waivers equal to 0.41% of the Fund's average daily net assets.

DIVIDENDS AND DISTRIBUTIONS

Distributions. The Fund does not offer a dividend reinvestment service to facilitate the reinvestment of distributions into additional Fund shares. The Fund intends to declare and pay dividends on investment income, if any, annually. The Fund also intends to make distributions of net capital gains, if any, at least annually. Dividends and capital gains distributions will be paid in cash.

Dividend Reinvestment Services. If you hold Fund shares through a broker that offers a dividend reinvestment service, you may elect to reinvest dividends and capital gains distributed by the Fund in additional shares of the Fund. Contact your broker to determine whether a reinvestment service is available and to discuss any related charges associated with the use of the reinvestment service.

As with all ETFs, reinvestment of dividend and capital gains distributions in additional shares of the Fund will occur after the ex-dividend date (the date when a distribution of dividends or capital gains is deducted from the price of the Fund's shares). The exact number of days depends on your broker. During that time, the amount of your distribution will not be invested in the Fund and therefore will not share in the Fund's income, gains, and losses. A shareholder will have an adjusted basis in the additional shares of the Fund acquired through a reinvest service equal to the amount of the reinvested distribution and the holding for the new shares shall commence on the day after such shares are credited to the shareholder's account.

TAX CONSEQUENCES

There are many important tax consequences associated with investment in the Fund offered by this Prospectus. The following is a brief summary of certain federal income tax consequences relating to an investment in the Fund. It is not a substitute for personal tax advice. You may also be subject to state and local tax on the Fund's distributions and the sale of Fund shares. Consult your personal tax adviser about the potential tax consequences of your investment in the Fund under all applicable tax laws. For more information, please see the SAI section "Taxes."

Taxation of Distributions. The Fund is treated as a separate entity for Federal tax purposes. The Fund intends to qualify as a "regulated investment company" ("RIC") for U.S. federal income tax purposes. If the Fund qualifies as a RIC, and satisfies certain distribution requirements, it will not be required to pay U.S. federal income taxes on income and gains it distributes to its shareholders.

The Fund intends to distribute substantially all of its net investment income (including net realized capital gains and tax-exempt interest income, if any) to its shareholders at least annually. Generally, distributions are subject to federal income tax for the year in which they are paid. Distributions paid in January but declared by the Fund in October, November or December of the previous year may be taxable to shareholders in the previous year.

Generally, you are required to pay federal income tax on any dividends and other distributions, including capital gains distributions received, that are paid from the Fund's current and accumulated earnings and profits. This applies whether dividends and other distributions are received in cash or as additional shares. Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in the Shares and as capital gain thereafter. A written statement will accompany any such distribution informing you that the distribution is a return of capital. If you hold Fund shares in a tax-qualified retirement account, you generally will not be subject to federal taxation on Fund distributions until you begin receiving distributions from your retirement account.

Distributions paid out of the Fund's income and net short-term gains, if any, are taxable as ordinary income or qualified dividend income. Distributions representing long-term capital gains, if any, will be taxable to you as long-term capital gains no matter how long you have held the shares. Distributions are taxable to you even if they are paid from income or gains earned by the Fund before your investment (and thus were included in the price paid).

Individuals, trusts, and estates whose income exceeds certain threshold amounts will be subject to a 3.8% Medicare contribution tax on "net investment income." Net investment income includes any ordinary dividends and capital gain distributions from the Fund as well as any capital gains recognized on the sale or exchange of Fund shares.

Distributions of investment income designated by the Fund as derived from “qualified dividend income” (income from taxable domestic corporations and certain qualified corporations) will be taxed at the rate applicable to long-term capital gains, provided holding period and other requirements are met at both the shareholder and Fund level. Long-term capital gain distributions paid to certain high-income taxpayers are subject to a regular tax rate of 20%. High income taxpayers, for this purpose, are defined in 2020, as individuals and married couples filing jointly whose taxable income exceeds \$441,450 and \$496,600, respectively, per year.

Foreign Securities. The Fund may be subject to foreign withholding taxes on the income it earns from investing in foreign securities which may reduce the return on such investments.

Backup Withholding. If you fail to furnish the Fund with your correct and certified Social Security or Taxpayer Identification Number, the Fund may be required to withhold federal income tax (backup withholding) from dividends, capital gain distributions and redemptions. You are urged to read the additional information concerning withholding provided in the SAI.

Non-U.S. Investors. If you are not a citizen or permanent resident of the U.S., the Fund’s ordinary income dividends will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies, or such income is effectively connected with a U.S. trade or business. The Fund may, under certain circumstances, designate all or a portion of a dividend as an “interest-related dividend” that if received by a nonresident alien or foreign entity generally would be exempt from the 30% U.S. withholding tax, provided that certain other requirements are met. The Fund may also, under certain circumstances, designate all or a portion of a dividend as a “short-term capital gain dividend” which if received by a nonresident alien or foreign entity generally would be exempt from the 30% U.S. withholding tax, unless the foreign person is a nonresident alien individual present in the U.S. for a period or periods aggregating 183 days or more during the taxable year.

Taxes on Exchange-Listed Sales and Cash Redemptions of Creation Units. You will recognize a taxable gain or loss upon the sale of the Fund’s shares in the secondary market and upon the cash redemption of the Fund’s Creation Unit. Currently, any capital gain or loss realized from the sale of the Fund’s shares for cash will generally be treated as long-term capital gain or loss if those shares have been held for more than one year and as short-term capital gain or loss if those shares have been held for one year or less. Any capital loss arising from the sale or disposition of the Fund’s shares held for six months or less will be treated as long-term capital loss to the extent of the amount of capital gain dividends received or undistributed capital gain deemed received with respect to the shares. All or a portion of any loss recognized upon the disposition of the Fund’s shares may be disallowed under “wash sale” rules if other shares of the Fund are purchased (whether through reinvestment of distributions or otherwise) within 30 days before or after the disposition. If disallowed, the loss will be reflected in an adjustment to the basis of the shares that you acquired.

Taxes on In-Kind Purchases and Redemptions of Creation Units. An Authorized Participant who exchanges securities or securities and cash for a Creation Unit will generally recognize a gain or loss equal to the difference between the market value of the Creation Unit at the time of purchase (plus any cash received by the Authorized Participant as part of the issue) and the exchanger’s aggregate basis in the securities surrendered and the amount of any cash paid for the Creation Unit. An Authorized Participant who exchanges a Creation Unit for securities or securities and cash will generally recognize a gain or loss equal to the difference between the exchanger’s basis in the Creation Unit (plus any cash paid by the Authorized Participant as part of the redemption) and the aggregate market value of the securities and cash received for the Creation Unit. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for a Creation Unit cannot be deducted currently under the rules governing “wash sales,” or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible. Under current federal tax laws, any capital gain or loss realized upon redemption of a Creation Unit is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less. If you

purchase or redeem Creation Units, you will be sent a confirmation statement showing how many Creation Units of the Fund you purchased and sold and at what price.

If the Fund redeems Creation Units in cash, it may recognize more capital gains than it will if it redeems Creation Units in-kind.

FINANCIAL HIGHLIGHTS

The financial highlights table below is intended to help you understand the Fund's financial performance since its inception. Certain information reflects financial results for a single Share. The total returns in the table represent the rate that an investor would have earned (or lost) on an investment in the Fund (assuming reinvestment of all dividends and other distributions). This information has been derived from the Fund's financial statements, which have been audited by Cohen & Company, Ltd., the Fund's independent registered public accounting firm, whose report, along with the Fund's financial statements, is included in the Fund's Annual Report for the fiscal year ended April 30, 2023, which is available upon request.

	Net Asset Value, beginning of period	Net investment income (loss) ^(a)	Net realized and unrealized gains (losses)	Total from investment activities	Distributions from net investment income	Distributions from Return of Capital	Total distributions	Net Asset Value, end of period	Total return at Net Asset Value ^{(b)(c)}	Total return at market ^{(b)(d)}	Ratio of Net Expenses to Average Net Assets ^(e)	Ratio of Gross Expenses to Average Net Assets ^{(e)(f)}	Ratio of Net Investment Income (Loss) to Average Net Assets ^(e)	Net Assets at end of period (000's)	Portfolio turnover ^{(b)(g)}
Strategy Shares Newfound/ReSolve Robust Momentum ETF (ROMO)															
Year Ended April 30, 2023	\$26.07	0.20	(0.44)	(0.24)	(0.19)	—	(0.19)	\$25.64	(0.89)%	(1.04)%	0.76% ^{(h)(i)}	0.83% ^(h)	0.78%	\$49,348	246%
Year Ended April 30, 2022	\$27.30	0.17	(1.23)	(1.06)	(0.17)	—	(0.17)	\$26.07	(3.97)%	(3.79)%	0.75% ^(h)	0.82% ^(h)	0.61%	\$50,188	221%
Year Ended April 30, 2021	\$21.55	0.21	5.78	5.99	(0.24)	(0.00) ^(j)	(0.24)	\$27.30	27.91%	27.64%	0.75% ^(h)	0.90% ^(h)	0.88%	\$42,321	309%
November 1, 2019 ^(k) through April 30, 2020	\$25.15	0.11	(3.56)	(3.45)	(0.15)	—	(0.15)	\$21.55	(13.82)%	(13.70)%	0.75% ^(h)	1.56% ^(h)	0.94%	\$20,472	145%

(a) Calculated using the average shares method.

(b) Not annualized for periods less than one year.

(c) Net asset value total return is calculated assuming an initial investment made at the net asset value at the beginning of the period, reinvestment of all distributions, including dividends and return of capital, at net asset value during the period, if any, and redemption on the last day of the period at net asset value. This percentage is not an indication of the performance of a shareholder's investment in the Fund based on market value due to differences between the market price of the shares and the net asset value per share of the Fund.

(d) Market value total return is calculated assuming an initial investment made at the market value at the beginning of the period, reinvestment of all distributions, including dividends and return of capital, at net asset value during the period, if any, and redemption on the last day of the period at market value. Market value is determined by the composite closing price. Composite closing security price is defined as the last reported sale price from any primary listing market (e.g., Nasdaq) or participating regional exchanges or markets. The composite closing price is the last reported sale price from any of the eligible sources, regardless of volume and not an average price and may have occurred on a date prior to the close of the reporting period. Market value may be greater or less than net asset value, depending on the Fund's closing price on the listing market.

(e) Annualized for periods less than one year.

(f) Certain fees were waived and/or reimbursed. If such waivers/reimbursements had not occurred, the ratios would have been as indicated.

(g) Portfolio turnover increases/decreases due to change within the portfolio holdings during the period.

(h) The Fund invests in other funds and indirectly bears its proportionate share of fees and expenses incurred by the underlying funds in which the Fund is invested. The ratio does not include these indirect fees and expenses.

(i) Excluding interest expense, the net expense ratio would have been 0.75%

(j) Amount is less than (\$0.005).

(k) Commencement of operations.

INDEX PROVIDERS

The Fund is not sponsored, endorsed, sold, or promoted by Newfound Research LLC and/or ReSolve Asset Management SEZC (Cayman) or any of their respective affiliates (collectively, “Index Providers”). Index Providers makes no representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly or the ability of the Index Providers to track general market performance. The Index is determined and composed by Index Providers without regard to the Advisor or the Fund. Index Providers have no obligation to take the needs of the Advisor or the owners of the Fund into consideration in determining, composing or calculating the Index. Index Providers are not responsible for and have not participated in the determination of the prices, and amount of the Fund or the timing of the issuance or sale of the Fund or in the determination or calculation of the equation by which the Fund is to be converted into cash, surrendered, or redeemed, as the case may be. Index Providers have no obligation or liability in connection with the administration, marketing, or trading of the Fund. There is no assurance that investment products based on the Index will accurately track index performance or provide positive investment returns. Inclusion of a security within an index is not a recommendation by Index Providers to buy, sell, or hold such security, nor is it considered to be investment advice. The Advisor and the Trust, on behalf of the Fund, have entered into a license agreement with the Index Providers that permits the Advisor and the Trust to use the Index in connection with the Fund.

INDEX PROVIDERS DO NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO OR ANY COMMUNICATION, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATION (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO. INDEX PROVIDERS SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS THEREIN. INDEX PROVIDERS MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY THE ADVISOR, OWNERS OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT WHATSOEVER SHALL INDEX PROVIDERS BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE.

The Index is calculated and published by Solactive AG, which entered into an Agreement on Index Calculation with Newfound Research LLC. Newfound Research LLC and ReSolve Asset Management SEZC (Cayman) co-own the Index. The Fund is not sponsored, promoted, sold or supported in any other manner by Solactive AG nor does Solactive AG offer any express or implicit guarantee or assurance either with regard to the results of using the Index and/or Index trademark or the Index Price at any time or in any other respect. Solactive AG uses its best efforts to ensure that the Index is calculated correctly. Irrespective of its obligations towards Newfound Research LLC and ReSolve Asset Management SEZC (Cayman), Solactive AG has no obligation to point out errors in the Index to third parties including but not limited to investors and/or financial intermediaries of the Fund. Neither publication of the Index by Solactive AG nor the licensing of the Index or Index trademark for the purpose of use in connection with the Fund constitutes a recommendation by Solactive AG to invest capital in the Fund nor does it in any way represent an assurance or opinion of Solactive AG with regard to any investment in the Fund

PREMIUM/DISCOUNT INFORMATION

Information showing the number of days the market price of the Fund's shares was greater (at a premium) and less (at a discount) than the Fund's NAV for the most recently completed calendar year, and the most recently completed calendar quarters since that year (or the life of the Fund, if shorter), is available at www.strategysharesetfs.com.

More information about the Fund is available free, upon request, including the following:

Annual and Semi-Annual Reports

Additional information about the Fund's investments is available in the Fund's annual and semi-annual reports to shareholders. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year.

Statement of Additional Information (SAI)

The SAI provides more detailed information about the Fund and its policies. A current SAI is on file with the SEC and is incorporated by reference into (considered a legal part of) this Prospectus.

Rational Advisors, Inc. is the Advisor to the Fund.

Forside Fund Services, LLC is the Distributor.
