FUND SUMMARY – STRATEGY SHARES HALT CLIMATE CHANGE ETF

Investment Objective: The Fund's investment objective is to seek long-term capital appreciation.

Fees and Expenses: This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.**

Shareholder Fees (fees paid directly from your investment)	None
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee ⁽¹⁾	0.95%
Distribution and/or Service Fee (12b-1) Fees	0.00%
Other Expenses ⁽²⁾	0.00%
Total Annual Operating Expenses	0.95%

⁽¹⁾ The management fee is structured as a “unified fee,” out of which the Fund’s adviser pays all routine expenses of the Fund, except for the Fund’s management fee; payments under any 12b-1 plan; taxes; brokerage commissions and trading costs; interest (including borrowing costs and overdraft charges); short sale dividends and interest expenses; acquired fund fees and expenses; and non-routine or extraordinary expenses of the Fund (such as litigation or reorganizational costs), each of which is paid by the Fund.

⁽²⁾ Estimated for the current fiscal year.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem or hold all of your shares at the end of those periods. This Example does not reflect the effect of brokerage commissions or other transaction costs you pay in connection with the purchase or sale of Fund shares. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year
\$97

3 Years
\$303

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. Because the Fund has not commenced operations as of the date of this prospectus, the portfolio turnover rate for the last fiscal year is not available. In the future, the portfolio turnover rate for the fiscal period from January 7, 2022 (commencement of operations) to April 30, 2022 will be provided here.

Principal Investment Strategy

The Fund seeks to achieve its investment objective by investing in the equity securities of companies that are committed to curbing or mitigating the deleterious effects of climate change. The equity securities in which the Fund may invest include common stock and American Depositary Receipts (“ADRs”). The Fund may invest in companies domiciled in any country, including emerging markets, and may invest in companies of any market capitalization.

Under normal market conditions, the Fund invests at least 80% of its net assets (plus borrowings for investment purposes) in the securities of climate conscious and environmentally friendly companies, with a focus on the reduction of carbon emissions (“Halt Climate Change Companies”), as determined by Rational Advisors, Inc., the

Fund's investment advisor (the "Advisor"). The Fund defines Halt Climate Change Companies as those that meet one or more of the carbon impact criteria set forth below:

- Direct commitment to net zero or reduced carbon emissions through a company climate pledge or involvement in initiatives such as the Paris Agreement, The Climate Pledge or other similar types of accords.
- Companies deriving at least 50% of their revenues or profit from, or devoting at least 50% of their assets to activities focused on advancing the progress of reducing carbon emissions through alternative energy innovation in clean transportation as well as industrial efficiency, technological advancements in electrification, climate-conscious value chains and other similar initiatives.
- Companies that invest a significant portion of their capital expenditures in new processes and business segments that seek to accelerate the global transition of fossil fuel related energy to renewable energy, with the intention of such activities becoming a significant part of their business.

The Fund will not invest in any company whose principal business function is related to the extraction, development or transportation of oil, gas or other fossil fuels.

The Advisor selects securities of companies for the Fund's portfolio and weights them in the Fund's portfolio based on a review of various fundamental factors of a Halt Climate Change Company's risk return potential. Fundamental factors evaluated by the Advisor include the company's financial statements, business model, credit metrics, financial ratios, valuations, and other company-specific characteristics (which include, but are not limited to sector, industry, and market capitalization). Companies that the Advisor believes to have higher risk return potential receive greater weights in the Fund's portfolio.

The Fund will sell a company when it no longer meets the Advisor's criteria to be classified as a Halt Climate Change company and/or when the Advisor believes that the company no longer has a high risk return potential relative to others within the Fund's investment universe. The Fund actively trades its portfolio investments, which may lead to higher transaction costs that may affect the Fund's performance.

The Fund is classified as "non-diversified" for purposes of the Investment Company Act of 1940, as amended (the "1940 Act"), which means a relatively high percentage of the Fund's assets may be invested in the securities of a limited number of issuers.

Principal Investment Risks

As with any ETF, there is no guarantee that the Fund will achieve its objective. Investment markets are unpredictable and there will be certain market conditions where the Fund will not meet its investment objective and will lose money. The Fund's net asset value, market price and returns will vary and you could lose money on your investment in the Fund and those losses could be significant. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

The following summarizes the principal risks of investing in the Fund. These risks could adversely affect the net asset value, market price, total return and the value of the Fund and your investment.

Equity Securities Risk. The price of equity securities in the Fund's portfolio will fluctuate based on actual or perceived changes in a company's financial condition and on market and economic conditions. Investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction and global or regional political, economic and banking crises.

Market Risk. The value of securities in the Fund's portfolio will fluctuate and, as a result, the Fund's NAV or market price per share may decline suddenly or over a sustained period of time. Factors such as domestic and foreign economic growth rates and market conditions, interest rate levels and political events may adversely affect the securities markets. The impacts of the novel coronavirus known as COVID-19 on the global economy has resulted, and may continue to result, in prolonged periods of heightened volatility with respect to inflation, the value of global currencies, including the U.S. dollar, and the value of gold, each of which may adversely affect the performance of the Fund. Further, the Fund may face challenges with respect to its day-to-day operations if key personnel of the Advisor or other service providers are unavailable due to quarantines and restrictions on travel. As a result, the risk environment remains elevated. The Advisor will monitor developments and seek to manage the Fund in a manner consistent with achieving the Fund's investment objective, but there can be no assurance that it will be successful in doing so.

ADR Risk. ADRs, which are typically issued by a bank, are certificates that evidence ownership of shares of a foreign company and are alternatives to purchasing foreign securities directly in their national markets and currencies. ADRs are subject to the same risks as direct investment in foreign companies and involve risks that are not found in investments in U.S. companies. ADRs may not track the price of the underlying foreign securities on which they are based, and their value may change materially at times when U.S. markets are not open for trading. Certain ADRs are not listed on an exchange and therefore may be considered to be illiquid.

Foreign Investment Risk. Investments in foreign securities tend to be more volatile and less liquid than investments in U.S. securities because, among other things, they involve risks relating to political, social and economic developments abroad, including economic sanctions, as well as risks resulting from differences between the regulations and reporting standards and practices to which U.S. and foreign issuers are subject. Investing in foreign securities includes trading related risks (e.g., government supervision and regulation of foreign securities and currency markets, trading systems and brokers maybe less than in the U.S., and foreign securities may be subject to foreign governmental restrictions such as exchange controls). All of the risks of investing in foreign securities are typically increased by investing in emerging market countries. Securities denominated in foreign currencies may be adversely affected by changes in currency rates and by substantial currency conversion costs. The departure of the United Kingdom and the potential departure of additional countries from the European Union may have significant political and financial consequences on global markets. Uncertainty relating to the withdrawal procedures and timeline may have adverse effects on valuations and the renegotiation of current trade agreements, as well as an increase in financial regulation in such markets.

Emerging Market Risk. Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. Securities law and the enforcement of systems of taxation in many emerging market countries may change quickly and unpredictably, and the ability to bring and enforce actions, or to obtain information needed to pursue or enforce such actions, may be limited. Companies in emerging market countries generally may be subject to less stringent regulatory, disclosure, financial reporting, accounting, auditing and recordkeeping standards than companies in more developed countries. As a result, information, including financial information, about such companies may be less available and reliable, which can impede the Fund's ability to evaluate such companies. Emerging markets usually are subject to greater market volatility, political, social and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than are more developed markets. Emerging market economies may be based on only a few industries and security issuers may be more susceptible to economic weakness and more likely to default. Emerging market securities also tend to be less liquid and the prices of such securities tend to be more volatile than the securities of issuers located in developed markets. Investments in emerging markets securities may be subject to additional transaction costs, delays in settlement procedures, unexpected market closures, and lack of timely information.

Climate Change Investment Focus Risk. The Fund's focus on securities of issuers that seek to prevent or mitigate the deleterious effects of climate change may affect the Fund's exposure to certain sectors or types of investments.

The Fund's relative investment performance may also be negatively affected if such sectors or investments are out of favor with the market. Certain investments may be dependent on U.S. and foreign government policies, including tax incentives and subsidies, as well as on political support for certain environmental initiatives and developments affecting companies focused on sustainable energy and climate change solutions generally. In addition, under certain market conditions, the Fund may underperform funds that invest in a broader array of investments. The Fund's exclusion of investments in companies with significant fossil fuel exposure, in particular, may adversely affect the Fund's relative performance at times when such investments are performing well.

Non-Diversification Risk. To the extent that the Fund holds securities of a smaller number of issuers or invests a larger percentage of its assets in a single issuer than a diversified portfolio, the value of the Fund, as compared to the value of a diversified portfolio, will generally be more volatile and more sensitive to the performance of any one of those issuers and to economic, political, market or regulatory events affecting any one of those issuers.

Investment Style Risk. The type of securities in which the Fund focuses may underperform other assets or the overall market.

Issuer Specific Risk. The performance of the Fund depends on the performance of the issuers of the individual securities in which the Fund invests. Poor performance by any issuer may cause the value of its securities, and the value of the Fund's Shares, to decline. The value of a specific security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

Small and Medium Capitalization Companies. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Small and medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures and may have limited markets, product lines, or financial resources and lack management experience.

Large Capitalization Company Risk. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

ETF Structure Risk. The Fund is structured as an ETF and, as a result, is subject to special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough Shares to constitute a Creation Unit. Fund shares are typically bought and sold in the secondary market and investors typically pay brokerage commissions or other charges on these transactions.
- *Trading Issues.* Trading in Shares on the Nasdaq Stock Market (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.
- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the

exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.

- In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund's net asset value.
- The market price for the Fund's shares may deviate from the Fund's net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund's net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
- When all or a portion of an ETF's underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value.
- In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value.

Management Risk. The Advisor may not successfully implement the Fund's investment strategies and, as a result, the Fund may not meet its investment objective and/or underperform other investment vehicles with similar investment objectives and strategies.

New Fund Risk. The Fund is a new fund with no history of operations as an ETF for investors to evaluate. If the Fund is unable to achieve an economic size, expenses will be higher than expected and the Fund might close, which could produce adverse tax consequences for shareholders.

Authorized Participant Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. An "Authorized Participant" is a participant in the Continuous Net Settlement System of the National Securities Clearing Corporation or the Depository Trust Company ("DTC") and that has executed a Participant Agreement with the Fund's distributor ("Distributor"). To the extent these Authorized Participants exit the business or are unable to process creation and/or redemption orders and no other Authorized Participant is able to step forward to process creation and/or redemption orders, in either of these cases, shares of the Fund may trade like closed-end fund shares at a discount to NAV and possibly face delisting.

Turnover Risk. The Fund may have a high turnover of the securities held in its portfolio. Increased portfolio turnover causes the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance and may produce increased taxable distributions.

Performance:

Because the Fund is a new fund, it has no performance history. In the future, performance information will be presented in this section of this Prospectus. Updated performance information will be available at no cost at www.strategysharesetfs.com or by calling (855) 4SS-ETFS or (855) 477-3837.

Advisor: Rational Advisors, Inc. is the Fund’s investment advisor.

Portfolio Managers: David Miller, Senior Portfolio Manager of the Advisor, Charles Ashley, Portfolio Manager of the Advisor, and Robert Gough, Portfolio Manager of the Advisor, serve as the Fund’s Portfolio Managers and are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Miller, Ashley, and Gough have served the Fund in this capacity since it commenced operations in January 2022.

Purchase and Sale of Fund Shares: You may purchase and sell individual Fund shares at market prices on the Nasdaq Stock Market (the “Exchange”) through your financial institution on each day that the Exchange is open for business (“Business Day”). Because individual Fund shares trade at market prices rather than at their NAV, shares may trade at a price greater than NAV (premium) or less than NAV (discount). You may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”).

Recent information, including information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.strategysharesetfs.com.

Tax Information: The Fund’s distributions are taxable as ordinary income or capital gains, except when your investment is through a tax-advantaged account such as an Individual Retirement Account (IRA) or you are a tax-exempt investor. Distributions from a tax-advantaged account may be taxed as ordinary income when withdrawn from such account.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Advisor and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUND’S PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

INVESTMENT OBJECTIVE

The Fund’s investment objective is to seek long-term capital appreciation. The investment objective of the Fund is non-fundamental and may be changed by the Board of Trustees without shareholder approval. If the Board decides to change the Fund’s investment objective or the Fund’s policy to invest at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in the securities of Halt Climate Change Companies, shareholders will be given 60 days’ advance notice.

PRINCIPAL INVESTMENT STRATEGIES

The Fund seeks to achieve its investment objective by investing in the equity securities of companies that are committed to curbing or mitigating the deleterious effects of climate change. Such companies include those that have adopted environmentally friendly business practices, such as pledging to reduce carbon emissions, and those that produce products and services that combat climate change, such as clean energy alternatives to fossil fuels, hydrogen- and/or electric-powered vehicles, and solar energy products and services. The equity securities in which the Fund may invest include common stock and American Depositary Receipts (“ADRs”). The Fund may invest in companies domiciled in any country, including emerging markets, and may invest in companies of any market capitalization.

Under normal market conditions, the Fund invests at least 80% of its net assets (plus borrowings for investment purposes) in the securities of Halt Climate Change Companies, as determined by Advisor. The Fund defines Halt Climate Change Companies as those that meet one or more of the carbon impact criteria set forth below:

- Direct commitment to net zero or reduced carbon emissions through a company climate pledge or involvement in initiatives such as the Paris Agreement (a widely adopted international accord that seeks to limit the average global temperature rise to well below 2°C above preindustrial levels and limit this increase to 1.5°C; to increase the ability to adapt to the adverse effects of climate change and foster climate-resilient and low greenhouse gas emissions development; and to make financial flows consistent with a pathway toward low greenhouse gas emissions and climate-resilient development), The Climate Pledge (a commitment to be net-zero carbon by 2040) or other similar types of accords.
- Companies deriving at least 50% of their revenues or profit from, or devoting at least 50% of their assets to activities focused on advancing the progress of reducing carbon emissions through alternative energy innovation in clean transportation (such as electric vehicles) as well as industrial efficiency (such as utilizing or constructing energy efficient buildings and installing solar panels, or using other sources of alternative energy), technological advancements in electrification, climate-conscious value chains (such as reducing packaging material and increasing use of suppliers who have adopted carbon reduction in their processes) and other similar initiatives.
- Companies that invest a significant portion of their capital expenditures in new processes and business segments that seek to accelerate the global transition of fossil fuel related energy to renewable energy, with the intention of such activities becoming a significant part of their business.

The Fund will not invest in any company whose principal business function is related to the extraction, development or transportation of oil, gas or other fossil fuels.

The Advisor selects securities of companies for the Fund's portfolio and weights them in the Fund's portfolio based on a review of various fundamental factors of a Halt Climate Change Company's risk return potential. Fundamental factors evaluated by the Advisor include the company's financial statements, business model, credit metrics, financial ratios, valuations, and other company-specific characteristics (which include, but are not limited to sector, industry, and market capitalization). Companies that the Advisor believes to have higher risk return potential receive greater weights in the Fund's portfolio.

The Fund will sell a company when it no longer meets the Advisor's criteria to be classified as a Halt Climate Change company and/or when the Advisor believes that the company no longer has a high risk return potential relative to others within the Fund's investment universe.

The Fund actively trades its portfolio investments, which may lead to higher transaction costs that may affect the Fund's performance.

The Fund is classified as "non-diversified" for purposes of the Investment Company Act of 1940, as amended (the "1940 Act"), which means a relatively high percentage of the Fund's assets may be invested in the securities of a limited number of issuers.

PRINCIPAL INVESTMENT RISKS

All ETFs carry a certain amount of risk. As with any ETF, there is no guarantee that the Fund will achieve its objective. Investment markets are unpredictable and there will be certain market conditions where the Fund will not meet its investment objective and will lose money. The Fund's net asset value, market price and returns will vary and you could lose money on your investment in the Fund and those losses could be significant. An investment in

the Fund is not a complete investment program. These risks affect the Fund directly as well as through the Underlying Funds in which it invests.

The following summarizes the principal risks of the Fund. These risks could adversely affect the net asset value, market price, total return and the value of the Fund and your investment. The risk descriptions below provide a more detailed explanation of the principal investment risks that correspond to the risks described in the Fund Summary section of the Prospectus.

American Depositary Receipts (“ADRs”) Risk. ADRs, which are typically issued by a bank, are certificates that evidence ownership of shares of a foreign company and are alternatives to purchasing foreign securities directly in their national markets and currencies. ADRs are subject to the same risks as direct investment in foreign companies and involve risks that are not found in investments in U.S. companies. In addition to the risks of investing in foreign securities discussed below, there is no guarantee that an ADR issuer will continue to offer a particular ADR. As a result, the Fund may have difficulty selling the ADR, or selling them quickly and efficiently at the prices at which they have been valued. In a sponsored ADR arrangement, the foreign company assumes the obligation to pay some or all of the depository’s transaction fees. Under an unsponsored ADR arrangement, the foreign company assumes no obligations and the depository’s transaction fees are paid directly by the ADR holders. Because unsponsored ADR arrangements are organized independently and without the cooperation of the foreign company, available information concerning the foreign company may not be as current as for sponsored ADRs and voting rights with respect to the deposited securities are not passed through. ADRs may not track the price of the underlying foreign securities on which they are based, and their value may change materially at times when U.S. markets are not open for trading. Certain ADRs are not listed on an exchange and therefore may be considered to be illiquid. Because ADRs are denominated in US dollars, they are also subject to currency risk, as movements in the exchange rate of the local currency of the foreign issuer versus the US dollar are automatically reflected in the price of the ADR in US dollars. Therefore, even if the price of the foreign security does not change on its local market, if the exchange rate of the local currency relative to the US dollar declines, the ADR price would decline by a similar measure.

Authorized Participant Risk. The Fund has a limited number of financial institutions that may act as Authorized Participants. An “Authorized Participant” is a participant in the Continuous Net Settlement System of the National Securities Clearing Corporation or the Depository Trust Company (“DTC”) and that has executed a Participant Agreement with the Fund’s distributor (“Distributor”). To the extent these Authorized Participants exit the business or are unable to process creation and/or redemption orders and no other Authorized Participant is able to step forward to process creation and/or redemption orders, in either of these cases, shares of the Fund may trade like closed-end fund shares at a discount to NAV and possibly face delisting.

Climate Change Investment Focus Risk. The Fund’s focus on securities of issuers that seek to prevent or mitigate the deleterious effects of climate change may affect the Fund’s exposure to certain sectors or types of investments. The Fund’s relative investment performance may also be negatively affected if such sectors or investments are out of favor with the market. Certain investments may be dependent on U.S. and foreign government policies, including tax incentives and subsidies, as well as on political support for certain environmental initiatives and developments affecting companies focused on sustainable energy and climate change solutions generally. In addition, under certain market conditions, the Fund may underperform funds that invest in a broader array of investments. The Fund’s exclusion of investments in companies with significant fossil fuel exposure, in particular, may adversely affect the Fund’s relative performance at times when such investments are performing well.

Emerging Market Risk. The Fund may invest in countries with newly organized or less developed securities markets. There are typically greater risks involved in investing in emerging markets securities. Generally, economic structures in these countries are less diverse and mature than those in developed countries and their political systems tend to be less stable. Emerging markets countries may have a higher degree of corruption and fraud than developed market countries, as well as counterparties and financial institutions with less financial sophistication, creditworthiness and/or resources. Emerging market economies may be based on only a few industries, therefore

security issuers, including governments, may be more susceptible to economic weakness and more likely to default. Emerging market countries may also have higher rates of inflation and more rapid and extreme fluctuations in inflation rates and greater sensitivity to interest rate changes. Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. Therefore, laws regarding foreign investment in emerging market securities, securities regulation, title to securities, and shareholder rights may change quickly and unpredictably. Emerging markets countries also may have less developed legal systems allowing for enforcement of private property rights and/or redress for injuries to private property, such as bankruptcy. The ability to bring and enforce actions in emerging market countries, or to obtain information needed to pursue or enforce such actions, may be limited and shareholder claims may be difficult or impossible to pursue. In addition, the taxation systems at the federal, regional and local levels in emerging market countries may be less transparent and inconsistently enforced, and subject to sudden change. Further, companies in emerging market countries generally may be subject to less stringent regulatory, disclosure, financial reporting, accounting, auditing and recordkeeping standards than companies in more developed countries and, as a result, the nature and quality of such information may vary. Information about such companies may be less available and reliable and, therefore, the ability to conduct adequate due diligence in emerging markets may be limited which can impede the Fund's ability to evaluate such companies. In addition, certain emerging market countries have material limitations on Public Company Accounting Oversight Board ("PCAOB") inspection, investigation and enforcement capabilities which hinder the ability to engage in independent oversight or inspection of accounting firms located in or operating in certain emerging markets; therefore, there is no guarantee that the quality of financial reporting or the audits conducted by audit firms of emerging market issuers meet PCAOB standards. The potentially smaller size of emerging markets countries' securities markets and lower trading volumes can make investments relatively illiquid and potentially more volatile than investments in developed countries, and such securities may be subject to abrupt and severe price declines. Due to this relative lack of liquidity, the Fund may have to accept a lower price or may not be able to sell a portfolio security at all. An inability to sell a portfolio position can adversely affect the Fund's value or prevent the Fund from being able to meet cash obligations or take advantage of other investment opportunities. Other risks of investing in emerging markets securities may include additional transaction costs, delays in settlement procedures, unexpected market closures, and lack of timely information.

Equity Securities Risk. The price of the common stock in the Fund's portfolio will fluctuate based on actual or perceived changes in a company's financial condition and on market and economic conditions. Investor perceptions are based on various and unpredictable factors, including expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction and global or regional political, economic and banking crises

ETF Structure Risk. The Fund is structured as an ETF and, as a result, is subject to special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough Shares to constitute a Creation Unit. Fund shares are typically bought and sold in the secondary market and investors typically pay brokerage commissions or other charges on these transactions.
- *Trading Issues.* Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.

- *Market Price Variance Risk.* Individual Shares of the Fund that are listed for trading on the Exchange can be bought and sold in the secondary market at market prices. The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares. There may be times when the market price and the NAV vary significantly and you may pay more than NAV when buying Shares on the secondary market, and you may receive less than NAV when you sell those Shares. The market price of Shares, like the price of any exchange-traded security, includes a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that Shares may trade at a discount to NAV and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Fund’s investment results are measured based upon the daily NAV of the Fund over a period of time. Investors purchasing and selling Shares in the secondary market may not experience investment results consistent with those experienced by those creating and redeeming directly with the Fund.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund’s net asset value.
 - The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETF’s underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading day, which could lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.
 - In stressed market conditions, the market for the Fund’s shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Fund’s shares may, in turn, lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.

Foreign Investment Risk. To the extent the Fund invest in foreign securities, the Fund could be subject to greater risks because the Fund’s performance may depend on issues other than the performance of a particular company or U.S. market sector. Changes in foreign economies and political climates are more likely to affect the Fund than they would a mutual fund that invests exclusively in U.S. companies. The value of foreign securities is also affected by the value of the local currency relative to the U.S. dollar. There may also be less government supervision of foreign markets, resulting in non-uniform accounting practices and less publicly available information. The values of foreign investments may be affected by changes in exchange control regulations, application of foreign tax laws (including withholding tax), changes in governmental administration or economic or monetary policy (in this country or abroad) or changed circumstances in dealings between nations. In addition, foreign brokerage commissions, custody fees and other costs of investing in foreign securities are generally higher than in the United States. Investments in foreign issuers could be affected by other factors not present in the United States, including expropriation, armed conflict, confiscatory taxation, and potential difficulties in enforcing contractual obligations. As a result, the Fund may be exposed to greater risk and will be more dependent on the Advisor’s ability to assess such risk than if the Fund invested solely in more developed countries. The departure of the United Kingdom and the potential departure of additional countries from the European Union may have significant political and financial consequences on global markets. Uncertainty relating to the withdrawal procedures and timeline may have adverse

effects on valuations and the renegotiation of current trade agreements, as well as an increase in financial regulation in such markets.

Investment Style Risk. The particular type of investments in which the Fund focuses (such as large-capitalization stocks) may underperform other asset classes or the overall market. Individual market segments such as the large-cap U.S. equity market segment tends to go through cycles of performing better or worse than other types of securities. These periods may last as long as several years. Additionally, a particular market segment could fall out of favor with investors, causing the Fund that focuses on that market segment to underperform those that favor other kinds of securities.

Issuer Specific Risk. The performance of the Fund depends on the performance of the issuers of the individual securities in which the Fund invests. Poor performance by any issuer may cause the value of its securities, and the value of the Fund's Shares, to decline. The value of a specific security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole. The value of securities of smaller issuers can be more volatile than those of larger issuers. The value of certain types of securities can be more volatile due to increased sensitivity to adverse issuer, political, regulatory, market, or economic developments.

Large Capitalization Stock Risk. Investments in larger, more established companies are subject to the risk that larger companies are sometimes unable to attain the high growth rates of successful, smaller companies, especially during extended periods of economic expansion. Large capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Larger, more established companies may be unable to respond quickly to new competitive challenges such as changes in consumer tastes or innovative smaller competitors potentially resulting in lower markets for their common stock. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

Management Risk. The Advisor may not successfully implement the Fund's investment strategies and, as a result, the Fund may not meet its investment objective and/or underperform other investment vehicles with similar investment objectives and strategies.

Market Risk. Overall market risks may also affect the value of the Fund. The market values of securities or other investments owned by the Fund will go up or down, sometimes rapidly or unpredictably. Factors such as economic growth and market conditions, interest rate levels, exchange rates and political events affect the securities markets. Changes in market conditions and interest rates generally do not have the same impact on all types of securities and instruments. Unexpected local, regional or global events and their aftermath, such as war; acts of terrorism; financial, political or social disruptions; natural, environmental or man-made disasters; the spread of infectious illnesses or other public health issues; recessions and depressions; or other tragedies, catastrophes and events could have a significant impact on the Fund and its investments and could result in increased premiums or discounts to the Fund's net asset value, and may impair market liquidity, thereby increasing liquidity risk. Such events can cause investor fear and panic, which can adversely affect the economies of many companies, sectors, nations, regions and the market in general, in ways that cannot necessarily be foreseen. The Fund could lose money over short periods due to short-term market movements and over longer periods during more prolonged market downturns. During a general market downturn, multiple asset classes may be negatively affected. In times of severe market disruptions you could lose your entire investment.

An outbreak of infectious respiratory illness caused by a novel coronavirus known as COVID-19 was first detected in China in December 2019 and subsequently spread globally. This coronavirus has resulted in, among other things, travel restrictions, closed international borders, enhanced health screenings at ports of entry and elsewhere, disruption of and delays in healthcare service preparation and delivery, prolonged quarantines, significant disruptions to business operations, market closures, cancellations and restrictions, supply chain disruptions, lower consumer demand, and significant volatility and declines in global financial markets, as well as general concern and uncertainty. The impact of COVID-19 has adversely affected, and other infectious illness outbreaks that may

arise in the future could adversely affect, the economies of many nations and the entire global economy, individual issuers and capital markets in ways that cannot necessarily be foreseen. In addition, the impact of infectious illnesses in emerging market countries may be greater due to generally less established healthcare systems. Public health crises caused by the COVID-19 outbreak may exacerbate other pre-existing political, social and economic risks in certain countries or globally.

The impacts of COVID-19 on the global economy has resulted, and may continue to result, in prolonged periods of heightened volatility with respect to inflation, the value of global currencies, including the U.S. dollar, and the value of gold, each of which may adversely affect the performance of the Fund. Further, the Fund may face challenges with respect to its day-to-day operations if key personnel of the Advisor or other service providers are unavailable due to quarantines and restrictions on travel. As a result, the risk environment remains elevated. The Advisor will monitor developments and seek to manage the Fund in a manner consistent with achieving the Fund's investment objective, but there can be no assurance that it will be successful in doing so. The duration of the COVID-19 outbreak and its effects cannot be determined with certainty.

New Fund Risk. The Fund is a new fund with no history of operations for investors to evaluate. Investors in the Fund bear the risk that the Fund may not be successful in implementing its investment strategies, may be unable to implement certain of its investment strategies or may fail to attract sufficient assets, any of which could result in the Fund being liquidated and terminated at any time without shareholder approval and at a time that may not be favorable for all shareholders. Such a liquidation could have negative tax consequences for shareholders and will cause shareholders to incur expenses of liquidation. ETFs and their advisers are subject to restrictions and limitations imposed by the Investment Company Act of 1940, as amended, and the Internal Revenue Code that do not apply to the Advisor's management of individual and institutional accounts. As a result, the Advisor may not achieve its intended result in managing the Fund.

Medium (Mid) Capitalization Stock Risk. To the extent the Fund invests in the stocks of mid-sized companies, the Fund may be subject to additional risks. The earnings and prospects of these companies are more volatile than larger companies. These companies may experience higher failure rates than larger companies. Mid-sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures. Mid-sized companies may also have limited markets, product lines or financial resources and may lack management experience.

Non-Diversification Risk. To the extent that the Fund holds securities of a smaller number of issuers or invests a larger percentage of its assets in a single issuer than a diversified portfolio, the value of the Fund, as compared to the value of a diversified portfolio, will generally be more volatile and more sensitive to the performance of any one of those issuers and to economic, political, market or regulatory events affecting any one of those issuers

Small Capitalization Stock Risk. To the extent a Fund invests in the stocks of smaller-sized companies, the Fund may be subject to additional risks. The earnings and prospects of these companies are more volatile than larger companies. Smaller-sized companies may experience higher failure rates than do larger companies. The trading volume of securities of smaller-sized companies is normally less than that of larger companies and, therefore, may disproportionately affect their market price, tending to make them fall more in response to selling pressure than is the case with larger companies. Smaller-sized companies may have limited markets, product lines or financial resources and may lack management experience.

Turnover Risk. The Fund may have a high turnover of the securities held in its portfolio. Increased portfolio turnover causes the Fund to incur higher brokerage costs, which may adversely affect the Fund's performance and may produce increased taxable distributions.

NON-PRINCIPAL INVESTMENT RISKS

Descriptions of non-principal risks are set forth below. These risks could adversely affect the net asset value, total return and the value of the Fund and your investment.

ADR Currency Risk. To establish a value for the shares, the issuer establishes a “conversion rate” equal to one share of an ADR for a certain number of shares of the stock of a foreign company. This “conversion rate” establishes a universal monetary relationship between the value of the ADR and the local currency of the foreign company stock. Although an ADR is priced in the US dollar, in order to preserve the uniformity of the established “conversion rate,” movements in the exchange rate of the local currency versus the US dollar are automatically reflected in the price of the ADR in US dollars. Therefore, even if the price of the foreign security does not change on its market, if the exchange rate of the local currency relative to the US Dollar declines, the ADR price would decline by a similar measure.

Affiliated Investment Company Risk. The Fund may invest in affiliated underlying funds (the “Affiliated Funds”), unaffiliated underlying funds, or a combination of both. The Advisor, therefore, is subject to conflicts of interest in allocating the Fund’s assets among the underlying funds. The Advisor will receive more revenue to the extent it selects an Affiliated Fund rather than an unaffiliated fund for inclusion in the Fund’s portfolio. In addition, the Advisor may have an incentive to allocate the Fund’s assets to those Affiliated Funds for which the net advisory fees payable to the Advisor are higher than the fees payable by other Affiliated Funds.

Asset-Backed and Mortgage Backed Security Risk. Prepayment risk is associated with mortgage-backed and asset-backed securities. If interest rates fall, the underlying debt may be repaid ahead of schedule, reducing the value of the Fund’s investments. If interest rates rise, there may be fewer prepayments, which would cause the average bond maturity to rise, increasing the potential for the Fund to lose money. The value of these securities may be significantly affected by changes in interest rates, the market’s perception of issuers, and the creditworthiness of the parties involved. The ability of the Fund to successfully utilize these instruments may depend on the ability of the Fund’s Adviser to forecast interest rates and other economic factors correctly. These securities may have a structure that makes their reaction to interest rate changes and other factors difficult to predict, making their value highly volatile. Certain mortgage-backed securities may be secured by pools of mortgages on single-family, multi-family properties, as well as commercial properties. Similarly, asset backed securities may be secured by pools of loans, such as student loans, automobile loans and credit card receivables. The credit risk on such securities is affected by homeowners or borrowers defaulting on their loans. The values of assets underlying mortgage-backed and asset-backed securities may decline and, therefore, may not be adequate to cover underlying investors. Mortgage-backed securities and other securities issued by participants in housing and commercial real estate finance, as well as other real estate-related markets have experienced extraordinary weakness and volatility in recent years. Possible legislation in the area of residential mortgages, credit cards and other loans that may collateralize the securities in which the Fund may invest could negatively impact the value of the Fund’s investments. To the extent the Fund focuses its investments in particular types of mortgage-backed or asset-backed securities, the Fund may be more susceptible to risk factors affecting such types of securities.

Bank Loans Risk. The market for bank loans may not be highly liquid and the Fund may have difficulty selling them. These investments expose the Fund to the credit risk of both the financial institution and the underlying borrower. Bank loans settle on a delayed basis, potentially leading to the sale proceeds of such loans not being available to meet redemptions for a substantial period of time after the sale of the bank loans. Certain bank loans may not be considered “securities” under the federal securities laws and purchasers, such as the Fund, therefore may not be entitled to rely on the protections of such laws, including anti-fraud provisions.

Business Development Companies (“BDC”) Risk. BDCs may carry risks similar to those of a private equity or venture capital fund. BDC company securities are not redeemable at the option of the shareholder and they may trade in the market at a discount to their net asset value. A BDC is a form of investment company that is required

to invest at least 70% of its total assets in securities (typically debt) of private companies, thinly traded U.S. public companies, or short-term high-quality debt securities. The BDCs held by the Fund may leverage their portfolios through borrowings or the issuance of preferred stock. While leverage often serves to increase the yield of a BDC, this leverage also subjects a BDC to increased risks, including the likelihood of increased volatility and the possibility that a BDC's common share income will fall if the dividend rate of the preferred shares or the interest rate on any borrowings rises. A significant portion of a BDC's investments are recorded at fair value as determined by its board of directors which may create uncertainty as to the value of the BDC's investments. Non-traded BDCs are illiquid and it may not be possible to redeem shares or to do so without paying a substantial penalty. Publicly-traded BDCs usually trade at a discount to their net asset value because they invest in unlisted securities and have limited access to capital markets. BDCs are subject to high failure rates among the companies in which they invest and federal securities laws impose restraints upon the organization and operations of BDCs that can limit or negatively impact the performance of a BDC. However, the Fund does not believe it would be liable for the actions of any entity in which it invests and that only its investment is at risk. Also, BDCs may engage in certain principal and joint transactions that a mutual fund or closed-end fund may not without an exemptive order from the SEC.

Capacity Risk. The markets and securities in which the Fund invests may, at times, have limited capacity, and the Advisor may not be able to allocate as much of the Fund's assets to a particular investment or type of investment as it desires. Under such conditions, the execution of the Fund's strategy may be affected and the Fund may not achieve its investment objective. In addition, the Fund may not be able to purchase or sell securities at favorable market prices.

Cash and Cash Equivalent Risk. At times, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund's performance and the Fund may not achieve its investment objective.

Cash Transactions. ETFs generally are able to make in-kind redemptions and avoid being taxed on gain on the distributed portfolio securities at the Fund level. Because the Fund may effect redemptions partly or entirely in cash, rather than in-kind, it may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. If the Fund recognizes gain on these sales, this generally will cause the Fund to recognize gain it might not otherwise have recognized, or to recognize such gain sooner than would otherwise be required if it were to distribute portfolio securities in-kind. The Fund generally intends to distribute these gains to shareholders to avoid being taxed on this gain at the Fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than, if they had made an investment in a different ETF. Moreover, cash transactions may have to be carried out over several days if the securities market is relatively illiquid and may involve considerable brokerage fees and taxes. These brokerage fees and taxes, which will be higher than if the Fund sold and redeemed its shares principally in-kind, could be imposed on the Fund and thus decrease the Fund's NAV to the extent they are not offset by the creation and redemption transaction fees paid by purchasers and redeemers of Creation Units.

Changing Fixed Income Market Conditions Risk. The current low interest rate environment was created in part by actions taken by the Board of Governors of the Federal Reserve System (the "Federal Reserve") to keep the federal funds rate at a historically low level, including expanding the scope of its repurchase agreement operations, and purchasing large quantities of securities issued or guaranteed by the U.S. government, its agencies or instrumentalities on the open market. Any future interest rate increases could cause the value of the Fund to decrease to the extent that it invests in fixed income securities. Federal Reserve policy changes may expose fixed-income and related markets to heightened volatility and may reduce liquidity for certain Fund investments, which could cause the value of the Fund's investments and share price to decline. To the extent the Fund experiences high redemptions because of these policy changes, the Fund may experience increased portfolio turnover, which will increase the costs the Fund incurs and may lower its performance. Furthermore, if rising interest rates cause the

Fund to lose enough value, the Fund could also face increased shareholder redemptions, which could force the Fund to liquidate investments at disadvantageous times or prices, therefore adversely affecting the Fund. In addition, decreases in fixed income dealer market-making capacity may persist in the future, potentially leading to decreased liquidity and increased volatility in the fixed income markets.

Collateralized Debt Obligations (“CDO”) and Collateralized Loan Obligations (“CLO”) Risk. CDOs and CLOs are securities backed by an underlying portfolio of debt and loan obligations, respectively. CDOs and CLOs issue classes or “tranches” that vary in risk and yield and may experience substantial losses due to actual defaults, decrease of market value due to collateral defaults and removal of subordinate tranches, market anticipation of defaults and investor aversion to CDO and CLO securities as a class. The risks of investing in CDOs and CLOs depend largely on the tranche invested in and the type of the underlying debts and loans in the tranche of the CDO or CLO, respectively, in which the Fund invests. The risks of investing in CDOs and CLOs depend largely on the tranche held by the Fund and the types of underlying debts and loans in such tranche of the CDO or CLO, respectively. The risks of CDOs and CLOs will be greater if the Fund invests in CDOs and CLOs that hold debt or loans of uncreditworthy borrowers or if the Fund holds subordinate tranches of the CDO or CLO that absorb losses from the defaults before senior tranches. CDOs and CLOs also carry risks including, but not limited to, interest rate risk and credit risk.

Collateralized Bond Obligation Risk. The pool of securities underlying collateralized bond obligations is typically separated in groupings called tranches representing different degrees of credit quality. The higher quality tranches have greater degrees of protection and pay lower interest rates. The lower quality tranches carry greater risk and pay higher interest rates.

Conflict of Interest - Advisors Risk. The Advisor and other individuals associated with the Advisor may have compensation and/or other arrangements that may be in conflict to the interests of the Fund.

Conflict of Interest - Portfolio Manager Risk. Actual or apparent conflicts of interest may arise when a portfolio manager has day-to-day management responsibilities with respect to more than one fund or other accounts. More specifically, portfolio managers who manage multiple funds are presented with the following potential conflicts:

- The management of multiple accounts may result in a portfolio manager devoting unequal time and attention to the management of each account. The management of multiple funds and accounts also may give rise to potential conflicts of interest if the funds and accounts have different objectives, benchmarks, time horizons, and fees as the portfolio manager must allocate his time and investment ideas across multiple funds and accounts.
- With respect to securities transactions for the Fund, the Advisor determines which broker to use to execute each order, consistent with the duty to seek best execution of the transaction. The portfolio manager may execute transactions for another fund or account that may adversely impact the value of securities held by the Fund. Securities selected for funds or accounts other than the Fund may outperform the securities selected for the Fund.
- The appearance of a conflict of interest may arise where the Advisor has an incentive, such as a performance-based management fee. The management of personal accounts may give rise to potential conflicts of interest; there is no assurance that the Fund’s code of ethics will adequately address such conflicts. One of the portfolio manager’s numerous responsibilities is to assist in the sale of Fund shares. Because the portfolio manager’s compensation is indirectly linked to the sale of Fund shares, they may have an incentive to devote time to marketing efforts designed to increase sales of Fund shares
- The Advisor has adopted a code of ethics that, among other things, permits personal trading by employees under conditions where it has been determined that such trades would not adversely impact client accounts.

Nevertheless, the management of personal accounts may give rise to potential conflicts of interest, and there is no assurance that these codes of ethics will adequately address such conflicts.

Convertible Securities Risk. Convertible bonds are hybrid securities that have characteristics of both bonds and common stocks and are subject to fixed income security risks and conversion value-related equity risk. Convertible bonds are similar to other fixed-income securities because they usually pay a fixed interest rate and are obligated to repay principal on a given date in the future. The market value of fixed-income securities tends to decline as interest rates increase. Convertible bonds are particularly sensitive to changes in interest rates when their conversion to equity feature is small relative to the interest and principal value of the bond. Convertible issuers may not be able to make principal and interest payments on the bond as they become due. Convertible bonds may also be subject to prepayment or redemption risk. If a convertible bond is called for redemption, the Fund will be required to surrender the security for redemption, convert it into the issuing company's common stock or cash at a time that may be unfavorable to the Fund. Convertible securities have characteristics similar to common stocks especially when their conversion value is greater than the interest and principal value of the bond. The price of equity securities may rise or fall because of economic or political changes. Stock prices in general may decline over short or even extended periods of time. Market prices of equity securities in broad market segments may be adversely affected by a prominent issuer having experienced losses or by the lack of earnings or such an issuer's failure to meet the market's expectations with respect to new products or services, or even by factors wholly unrelated to the value or condition of the issuer, such as changes in interest rates. When a convertible bond's value is more closely tied to its conversion to stock feature, it is sensitive to the underlying stock's price.

Counterparty Risk. The Fund may engage in transactions in securities and financial instruments that involve counterparties. Counterparty risk is the risk that a counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments, or otherwise honor its obligations.

Credit Default Swap Risk. Credit default swaps ("CDS") are typically two-party financial contracts that transfer credit exposure between the two parties. Under a typical CDS, one party (the "seller") receives pre-determined periodic payments from the other party (the "buyer"). The seller agrees to make compensating specific payments to the buyer if a negative credit event occurs, such as the bankruptcy or default by the issuer of the underlying debt instrument. The use of CDS involves investment techniques and risks different from those associated with ordinary portfolio security transactions, such as potentially heightened counterparty, concentration and exposure risks.

Credit Risk. Credit risk is the risk that an issuer of a security will fail to pay principal and interest in a timely manner, reducing the Fund's total return. In addition, the credit quality of fixed income securities held by the Fund may be lowered if an issuer's financial condition changes. The issuer of a fixed income security may also default on its obligations. The Fund's exposure to credit risk may be increased through its investments in high-yield securities commonly known as "junk bonds." Credit risk may be substantial for the Fund.

Credit Risk (for Floating Rate Loans). Credit risk is the risk that the issuer of a security and other instrument will not be able to make principal and interest payments when due. The value of the Fund's shares, and the Fund's ability to pay dividends, is dependent upon the performance of the assets in its portfolio. Prices of the Fund's investments can fall if the actual or perceived financial health of the borrowers on, or issuers of, such investments deteriorates, whether because of broad economic or issuer-specific reasons. In severe cases, the borrower or issuer could be late in paying interest or principal, or could fail to pay altogether.

In the event a borrower fails to pay scheduled interest or principal payments on an investment held by the Fund, the Fund will experience a reduction in its income and a decline in the market value of such investment. This will likely reduce the amount of dividends paid by the Fund and likely lead to a decline in the net asset value and market price of the Fund's shares.

The Fund may invest in floating rate loans that are senior in the capital structure of the borrower or issuer, and that are secured with specific collateral. Loans that are senior and secured generally involve less risk than unsecured or subordinated debt and equity instruments of the same borrower because the payment of principal and interest on senior loans is an obligation of the borrower that, in most instances, takes precedence over the payment of dividends or the return of capital to the borrower's shareholders, and payments to bond holders; and because of the collateral supporting the repayment of the debt instrument. However, the value of the collateral may not equal the Fund's investment when the debt instrument is acquired or may decline below the principal amount of the debt instrument subsequent to the Fund's investment. Also, to the extent that collateral consists of stocks of the borrower, or its subsidiaries or affiliates, the Fund bears the risk that the stocks may decline in value, be relatively illiquid, or may lose all or substantially all of their value, causing the Fund's investment to be undercollateralized. Therefore, the liquidation of the collateral underlying a floating rate loan in which the Fund has invested, may not satisfy the borrower's obligation to the Fund in the event of non-payment of scheduled interest or principal, and the collateral may not be able to be readily liquidated.

In the event of the bankruptcy of a borrower or issuer, the Fund could experience delays and limitations on its ability to realize the benefits of the collateral securing the Fund's investment. Among the risks involved in a bankruptcy are assertions that the pledge of collateral to secure a loan constitutes a fraudulent conveyance or preferential transfer that would have the effect of nullifying or subordinating the Fund's rights to the collateral.

The floating rate debt in which the Fund invests may be generally rated lower than investment-grade credit quality, i.e., rated lower than "Baa3" by Moody's Investors Service, Inc. ("Moody's") or "BBB-" by Standard & Poor's Ratings Services ("S&P"), or have been made to borrowers who have issued debt securities that are rated lower than investment-grade in quality or, if unrated, would be rated lower than investment-grade credit quality. A fund's investments in lower than investment-grade floating rate loans will generally be rated at the time of purchase between "B3" and "Ba1" by Moody's, "B-" and "BB+" by S&P or, if not rated, would be of similar credit quality. Investment decisions for the Fund will be based largely on the credit analysis performed by the Advisor, and not entirely on rating agency evaluation. This analysis may be difficult to perform. Information about a loan and its borrower generally is not in the public domain. Many borrowers have not issued securities to the public and are not subject to reporting requirements under federal securities laws. Generally, however, borrowers are required to provide financial information to lenders and information may be available from other loan market participants or agents that originate or administer loans.

Cybersecurity Risk. The computer systems, networks and devices used by the Fund and its service providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Fund and its service providers, systems, networks, or devices potentially can be breached. The Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact the Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its NAV; impediments to trading; the inability of the Fund, the Advisor and other service providers to transact business; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Fund invests; counterparties with which the Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other

financial institutions (including financial intermediaries and service providers for the Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

Derivatives Risk. The Fund may use derivatives including options and futures. The Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying reference asset. Derivatives may also be less tax efficient and subject to changing government regulation that could impact the Fund's ability to use certain derivatives or their cost. In addition, changes in government regulation of derivative instruments could affect the character, timing and amount of the Fund's taxable income or gains, and may limit or prevent the Fund from using certain types of derivative instruments as a part of its investment strategy, which could make the investment strategy more costly to implement or require the Fund to change its investment strategy. When a derivative is used for hedging, the change in value of the derivative may also not correlate specifically with the risk of the underlying asset being hedged. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, and changes in interest rates, inflation and deflation. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities including:

Futures Risk. The Fund's use of futures involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments and exposes the Fund to the risks associated with derivative instruments described above. These risks include (i) leverage risk (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the futures contract may not correlate perfectly with the underlying index. Investments in futures contracts involve leverage, which means a small percentage of assets invested in futures can have a disproportionately large impact on the Fund. This risk could cause the Fund to lose more than the principal amount invested. In addition, futures contracts may become mispriced or improperly valued relative to the Advisor's expectations and may not produce the desired investment results. Additionally, changes in the value of futures contracts may not track or correlate perfectly with the underlying reference asset because of temporary, or even long-term, supply and demand imbalances. Most U.S. commodity futures exchanges impose daily limits regulating the maximum amount above or below the previous day's settlement price which a futures contract price may fluctuate during a single day. During a single trading day no trades may be executed at prices beyond the daily limit. Once the price of a particular futures contract has increased or decreased to the limit point, it may be difficult, costly or impossible to liquidate a position. It is also possible that an exchange or the Commodity Futures Trading Commission ("CFTC"), which regulates commodity futures exchanges, may suspend trading in a particular contract, order immediate settlement of a contract or order that trading to the liquidation of open positions only.

Total Return Swap Risk. A total return swap is a contract in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to the Fund's portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap. The primary risks associated with total returns swaps are credit risk (if the counterparty fails to meet its obligations),

liquidity risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset) and pricing risk (the risk of improper valuation).

Dividend Yield Risk. While the Fund may hold securities of companies that have historically paid a dividend, those companies may reduce or discontinue their dividends, thus reducing the yield of the Fund. Lower priced securities in the Fund may be more susceptible to these risks. Past dividend payments are not a guarantee of future dividend payments. Also, the market return of high dividend yield securities, in certain market conditions, may be worse than the market return of other investment strategies or the overall stock market.

Duration Risk. Longer-term securities may be more sensitive to interest rate changes. Given the recent, historically low interest rates and the potential for increases in those rates, a heightened risk is posed by rising interest rates to longer-term fixed income securities. Effective duration estimates price changes for relatively small changes in rates. If rates rise significantly, effective duration may tend to understate the drop in a security's price. If rates drop significantly, effective duration may tend to overstate the rise in a security's price. Duration should not be confused with maturity. The maturity of a fixed income security is a measure of the amount of time left until the security "matures" or repays its face value. In contrast, duration measures the price sensitivity of a fixed income security to changes in interest rates rather than the amount of time remaining to maturity. Longer duration tends to result in greater volatility and a greater sensitivity to interest rate changes. For example, a five-year duration means that the fixed income security will decrease in value by 5% if interest rates rise 1% and increase in value by 5% if interest rates fall 1%.

Exchange Traded Note ("ETN") Risk. Similar to ETFs, owning an ETN generally reflects the risks of owning the assets that comprise the underlying market benchmark or strategy that the ETN is designed to reflect. ETNs also are subject to issuer and fixed income risk. In addition, ETNs are subject to counterparty risk, which is the risk that the broker-dealer or bank that issues the notes will not fulfill its contractual obligation to complete the transaction with the Fund. ETNs constitute general unsecured contractual obligations of the banks or broker-dealers that issue them, and the Fund is relying on the creditworthiness of such banks or broker-dealers. ETNs that are linked to market volatility are subject to default risk of the issuer; may not provide an effective hedge as historical correlation trends between the reference volatility index or measure and other asset classes may not continue or may reverse, limiting or eliminating any potential hedging effect; may become mispriced or improperly valued when compared to expectations and may not produce the desired investment results; may have tracking risk if the ETN does not move in step with its reference index; and may become illiquid.

Extension Risk. Extension risk is the risk that if interest rates rise, repayments of principal on certain debt securities, including, but not limited to, floating rate loans and mortgage-related securities, may occur at a slower rate than expected and the expected maturity of those securities could lengthen as a result. Securities that are subject to extension risk generally have a greater potential for loss when prevailing interest rates rise, which could cause their values to fall sharply.

Fixed Income Risk. The value of the Fund's fixed income securities will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the risk that the debtor may default) and prepayment risk (the risk that the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Floating Rate Loans Risk. The Fund may invest in floating rate loans that are senior in the capital structure of the borrower or issuer, and that are secured with specific collateral. Loans that are senior and secured generally involve less risk than unsecured or subordinated debt and equity instruments of the same borrower because the payment of principal and interest on senior loans is an obligation of the borrower that, in most instances, takes precedence over

the payment of dividends or the return of capital to the borrower's shareholders, and payments to bond holders; and because of the collateral supporting the repayment of the debt instrument. However, the value of the collateral may not equal the Fund's investment when the debt instrument is acquired or may decline below the principal amount of the debt instrument subsequent to the Fund's investment. Also, to the extent that collateral consists of stocks of the borrower, or its subsidiaries or affiliates, the Fund bears the risk that the stocks may decline in value, be relatively illiquid or may lose all or substantially all of their value, causing the Fund's investment to be under-collateralized. Therefore, the liquidation of the collateral underlying a floating rate loan in which the Fund has invested, may not satisfy the borrower's obligation to the Fund in the event of non-payment of scheduled interest or principal, and the collateral may not be able to be readily liquidated.

In the event of the bankruptcy of a borrower or issuer, the Fund could experience delays and limitations on its ability to realize the benefits of the collateral securing the Fund's investment. Among the risks involved in a bankruptcy are assertions that the pledge of collateral to secure a loan constitutes a fraudulent conveyance or preferential transfer that would have the effect of nullifying or subordinating the Fund's rights to the collateral.

Floating rate loans are also subject to interest rate risk arising from changes in short-term market interest rates. If short-term market interest rates fall, the yield on the Fund's shares will also fall. Conversely, when short-term market interest rates rise, because of the lag between changes in such short-term rates and the resetting of the floating rates on the floating rate debt in the Fund's portfolio, the impact of rising rates will be delayed to the extent of such lag. The impact of market interest rate changes on the Fund's yield will also be affected by whether, and the extent to which, the floating rate debt in the Fund's portfolio is subject to floors on the LIBOR base rate on which interest is calculated for such loans (a "LIBOR floor"). So long as the base rate for a loan remains under the LIBOR floor, changes in short-term interest rates will not affect the yield on such loans. In addition, to the extent that the interest rate spreads on floating rate debt in the Fund's portfolio experience a general decline, the yield on the Fund's shares will fall and the value of the Fund's assets may decrease, which will cause the Fund's net asset value to decrease.

On July 27, 2017, the United Kingdom's Financial Conduct Authority announced its intention to cease sustaining LIBOR after 2021. There remains uncertainty regarding the future utilization of LIBOR and the nature of any replacement rate. As such, the potential effect of a transition away from LIBOR on the Fund or the Fund's investments that use or may use a floating rate based on LIBOR cannot yet be determined.

The floating rate debt in which the Fund invests may be generally rated lower than investment-grade credit quality, i.e., rated lower than "Baa3" by Moody's Investors Service, Inc. ("Moody's") or "BBB-" by S&P Global Ratings ("S&P"), or have been made to borrowers who have issued debt securities that are rated lower than investment-grade in quality or, if unrated, would be rated lower than investment-grade credit quality. Investment decisions for the Fund will be based largely on the credit analysis performed by the Advisor, and not entirely on rating agency evaluation. This analysis may be difficult to perform. Information about a loan and its borrower generally is not in the public domain. Many borrowers have not issued securities to the public and are not subject to reporting requirements under federal securities laws. Generally, however, borrowers are required to provide financial information to lenders and information may be available from other loan market participants or agents that originate or administer loans.

Foreign Exchanges Risk. Neither existing CFTC regulations nor regulations of any other U.S. governmental agency apply to derivative transactions on foreign markets. Some of these foreign markets, in contrast to U.S. exchanges, are so-called principals' markets in which performance is the responsibility only of the individual counterparty with whom the trader has entered into a commodity interest transaction and not of the exchange or clearing corporation. In these kinds of markets, there is risk of bankruptcy or other failure or refusal to perform by the counterparty.

Foreign Currency Risk. Currency trading risks include market risk, credit risk and country risk. Market risk results from adverse changes in exchange rates in the currencies the Fund is long or short. Credit risk results because a currency-trade counterparty may default. Country risk arises because a government may interfere with transactions in its currency.

Forwards Risk. Foreign currency forward contracts are a type of derivative contract whereby the Fund may agree to buy or sell a country's or region's currency at a specific price on a specific date, usually 30, 60, or 90 days in the future. These contracts are subject to the risk of political and economic factors applicable to the countries issuing the underlying currencies and may fall in value due to foreign market downswings or foreign currency value fluctuations. Forward foreign currency contracts are individually negotiated and privately traded so they are dependent upon the creditworthiness of the counterparty and subject to counterparty risk. The Fund's investment or hedging strategies may not achieve their objective. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Derivative contracts ordinarily have leverage inherent in their terms and low margin deposits normally required in trading derivatives permit a high degree of leverage. Accordingly, a relatively small price movement may result in an immediate and substantial loss to the Fund. The use of leverage may also cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations or to meet collateral segregation requirements. The use of leveraged derivatives can magnify the Fund's potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Geographic Concentration Risk. The Fund may be particularly susceptible to economic, political, regulatory or other events or conditions affecting countries within the specific geographic regions in which the Fund invests. Currency devaluations could occur in countries that have not yet experienced currency devaluation to date, or could continue to occur in countries that have already experienced such devaluations. As a result, the Fund's net asset value or market price may be more volatile than a more geographically diversified fund.

Hedging Risk. Hedging is a strategy in which the Fund uses a derivative to offset the risks associated with other Fund holdings. There can be no assurance that the Fund's hedging strategy will reduce risk or that hedging transactions will be either available or cost effective.

Income Risk. The Fund's distributions to shareholders may decline when prevailing interest rates fall, when the Fund experiences deterioration of the underlying debt securities it holds, or when the Fund realizes a loss upon the sale of a debt security.

Index-Linked Derivative Securities Risk. If the derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index.

Inflation-Indexed Bond Risk. Inflation-indexed bonds are fixed income securities whose principal values are periodically adjusted according to a measure of inflation. If the index measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation indexed bonds. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal. With regard to municipal inflation-indexed bonds and certain corporate inflation-indexed bonds, the inflation adjustment is reflected in the semi-annual coupon payment. As a result, the principal value of municipal inflation-indexed bonds and such corporate inflation indexed bonds does not adjust according to the rate of inflation. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates are tied to the relationship between nominal interest rates and the rate of inflation. If nominal interest rates increase at a faster rate than inflation, real interest rates may rise, leading to a decrease in

value of inflation-indexed bonds. Inflation-indexed bonds may cause a potential cash flow mismatch to investors, because an increase in the principal amount of an inflation-indexed bond will be treated as interest income currently subject to tax at ordinary income rates even though investors will not receive repayment of principal until maturity. If the Fund invests in such bonds, it will be required to distribute such interest income in order to qualify for treatment as a regulated investment company and eliminate the Fund-level tax, without a corresponding receipt of cash, and therefore may be required to dispose of portfolio securities at a time when it may not be desirable.

Inflation Protected Securities Risk. Inflation-protected debt securities tend to react to changes in real interest rates. Real interest rates represent nominal (stated) interest rates reduced by the expected impact of inflation. In general, the price of an inflation-protected debt security can fall when real interest rates rise, and can rise when real interest rates fall. Interest payments on inflation-protected debt securities can be unpredictable and will vary as the principal and/or interest is adjusted for inflation.

Interest Rate Risk. Interest rate risk is the risk that bond prices overall, including the prices of securities held by the Fund, will decline over short or even long periods of time due to rising interest rates. Bonds with longer maturities tend to be more sensitive to interest rates than bonds with shorter maturities. For example, if interest rates go up by 1.0%, the price of a 4% coupon bond will decrease by approximately 1.0% for a bond with 1 year to maturity and approximately 4.4% for a bond with 5 years to maturity. The maturity and effective duration of the Fund's investment portfolio may vary materially, from time to time, and there is no assurance that the Fund will achieve or maintain any particular target maturity or effective duration of its investment portfolio.

Inverse ETF and ETN Risk. Investing in inverse ETFs and ETNs may result in increased volatility due to the ETF's or ETN's possible use of short sales of securities and derivatives such as options and futures. The use of leverage by an ETF or ETN increases risk to the Fund. The more the Fund invests in leveraged instruments, the more the leverage will magnify any gains or losses on those investments. During periods of increased volatility, inverse ETFs and ETNs may not perform in the manner they are designed.

Investment Style Risk. The particular type of investments in which the Fund focuses (such as large-capitalization stocks or growth stocks) may underperform other asset classes or the overall market. Individual market segments such as the large-cap, mid-cap and small-cap U.S. equity market segments tend to go through cycles of performing better or worse than other types of securities. These periods may last as long as several years. Additionally, a particular market segment could fall out of favor with investors, causing the Fund that focuses on that market segment to underperform those that favor other kinds of securities.

Junk Bond Risk. Lower-quality bonds, known as "high yield" or "junk" bonds are considered to be speculative with respect to the issuer's ability to pay interest and principal when due and present a significant risk for loss of principal and interest. These bonds offer the potential for higher return, but also involve greater risk than bonds of higher quality, including an increased possibility that the bond's issuer, obligor or guarantor may not be able to make its payments of interest and principal (credit quality risk). If that happens, the value of the bond may decrease, and the Fund's share price may decrease and its income distribution may be reduced. An economic downturn or period of rising interest rates (interest rate risk) could adversely affect the market for these bonds and reduce the Fund's ability to sell the bonds in its portfolio (liquidity risk). Such securities may also include "Rule 144A" securities, which are subject to resale restrictions. The lack of a liquid market for these bonds could decrease the value of the Fund's portfolio and net asset value per share.

Leverage Risk. Using derivatives can create leverage, which can amplify the effects of market volatility on the Fund's share price and make the Fund's returns more volatile. The use of leverage may cause the Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. The use of leverage may also cause the Fund to have higher expenses than those of funds that do not use such techniques.

Leveraged ETF Risk. Investing in leveraged ETFs will amplify the Fund’s gains and losses. Most leveraged ETFs “reset” daily. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance of their underlying index or benchmark during the same period of time.

LIBOR Risk. The Fund may invest in LIBOR-linked investments and it was announced that that LIBOR would be phased out by the end of 2021. Although many LIBOR rates were phased out at the end of 2021 as originally intended, a selection of widely used USD LIBOR rates will continue to be published until June 2023 in order to assist with the transition. While some instruments may contemplate a scenario where LIBOR is no longer available by providing for an alternative rate setting methodology, not all instruments may have such provisions and there is significant uncertainty regarding the effectiveness of any such alternative methodologies and potential for short-term and long-term market instability. Because of the uncertainty regarding the nature of any replacement rate, the Fund cannot reasonably estimate the impact of the anticipated transition away from LIBOR at this time. If the LIBOR replacement rate is lower than market expectations, there could be an adverse impact on the value of preferred and debt securities with floating or fixed-to-floating rate coupons.

Liquidity Risk. Liquidity risk exists when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations. Liquid securities can become illiquid due to political, economic or issuer specific events; supply/demand imbalances; changes in a specific market’s size or structure, including the number of participants; or overall market disruptions.

Litigation Risk. The Fund may be named in a lawsuit despite no wrongdoing by the Fund, its Advisor or any other service provider to the Fund. The defense of a lawsuit may detrimentally impact the Fund and its shareholders, including incurring legal defense cost, regulatory costs and increased insurance premiums.

Loan Risk. Investments in bank loans may subject the Fund to heightened credit risks because such loans tend to be highly leveraged and potentially more susceptible to the risks of interest deferral, default and/or bankruptcy. Senior floating rate loans are often rated below investment grade, but may also be unrated. The risks associated with these loans can be similar to the risks of below investment grade fixed income instruments. An economic downturn would generally lead to a higher non-payment rate, and a senior floating rate loan may lose significant market value before a default occurs. Moreover, any specific collateral used to secure a senior floating rate loan may decline in value or become illiquid, which would adversely affect the loan’s value. Unlike the securities markets, there is no central clearinghouse for loan trades, and the loan market has not established enforceable settlement standards or remedies for failure to settle. Therefore, portfolio transactions in loans may have uncertain settlement time periods. Senior floating rate loans are subject to a number of risks described elsewhere in this Prospectus, including liquidity risk and the risk of investing in below-investment grade fixed income instruments.

Market Volatility-Linked ETFs Risk. ETFs that are linked to market volatility have the risks associated with investing in futures.

MBS and CMO Risk. MBS and CMOs are subject to credit risk because underlying loan borrowers may default. MBS and CMO default rates tend to be sensitive to overall economic conditions and to localized property vacancy rates and prices. Borrower default rates may be significantly higher than estimated. Certain individual securities may be more sensitive to default rates because payments may be subordinated to other securities of the same issuer. The Advisor’s assessment, or a rating agency’s assessment, of borrower credit quality, default rates and loss rates may prove to be overly optimistic. Additionally, MBS and CMOs are subject to prepayment risk because the underlying loans held by the issuers may be paid off prior to maturity at faster or lower rates than expected. The value of these securities may go down as a result of changes in prepayment rates on the underlying mortgages or loans. During periods of declining interest rates, prepayment rates usually increases and the Fund may have to

reinvest prepayment proceeds at a lower interest rate. CMOs may be less susceptible to this risk because payment priorities within the CMO may have the effect of a prepayment lock out period.

MLP and MLP-Related Securities Risk. Investments in MLPs and MLP-related securities involve risks different from those of investing in common stock including risks related to limited control and limited rights to vote on matters affecting the MLP or MLP-related security, risks related to potential conflicts of interest between an MLP and the MLP's general partner, cash flow risks, dilution risks (which could occur if the MLP raises capital and then invests it in projects whose return fails to exceed the cost of capital raised) and risks related to the general partner's limited call right. MLPs and MLP-related securities are generally considered interest-rate sensitive investments. During periods of interest rate volatility, these investments may not provide attractive returns. Depending on the state of interest rates in general, the use of MLPs or MLP-related securities could enhance or harm the overall performance of the Fund.

MLPs do not pay U.S. federal income tax at the partnership level, subject to the application of certain partnership audit rules. Instead, each partner is allocated a share of the partnership's income, gains, losses, deductions and expenses. A change in current tax law or in the underlying business mix of a given MLP could result in an MLP being treated as a corporation for U.S. federal income tax purposes, which would result in such MLP being required to pay U.S. federal income tax on its taxable income. The classification of an MLP as a corporation for U.S. federal income tax purposes would have the effect of reducing the amount of cash available for distribution by the MLP. Thus, if any of the MLPs owned by the Fund were treated as corporations for U.S. federal income tax purposes, it could result in a reduction of the value of your investment in the Fund and lower income, as compared to an MLP that is not taxed as a corporation.

Mortgage-Backed Securities Risk. Mortgage-backed securities represent participating interests in pools of residential mortgage loans, some of which are guaranteed by the U.S. government, its agencies or instrumentalities. However, the guarantee of these types of securities relates to the principal and interest payments and not the market value of such securities. In addition, the guarantee only relates to the mortgage-backed securities held by the Fund and not the purchase of shares of the Fund.

Mortgage-backed securities do not have a fixed maturity and their expected maturities may vary when interest rates rise or fall. An increased rate of prepayments on the Fund's mortgage-backed securities will result in an unforeseen loss of interest income to the Fund as the Fund may be required to reinvest assets at a lower interest rate. A decreased rate of prepayments lengthens the expected maturity of a mortgage-backed security, causing the price of the mortgage-backed securities and the Fund's net asset value per share to fall and making the mortgage-backed securities more sensitive to interest rate changes. The prices of mortgage-backed securities may decrease more than prices of other fixed-income securities when interest rates rise. An unexpectedly high rate of defaults on the mortgages held by a mortgage pool will adversely affect the value of mortgage-backed securities and will result in losses to the Fund. The liquidity of mortgage-backed securities, and particularly non-agency non-investment grade mortgage-backed securities, may change over time. Mortgage-backed securities and other securities issued by participants in housing and commercial real estate finance, as well as other real estate-related markets have experienced extraordinary weakness and volatility in certain years.

Mortgage-backed securities issued or guaranteed by private issuers are also known as "non-agency mortgage-backed securities." Non-agency mortgage-backed securities are not subject to the same underwriting requirements as those with government or government-sponsored entity guarantees and, therefore, mortgage loans underlying privately issued mortgage-related securities may have less favorable collateral, credit risk or other underwriting characteristics, and wider variances in interest rate, term, size, purpose and borrower characteristics. The market for non-agency mortgage-backed securities is smaller and less liquid than the market for government-issued mortgage-backed securities.

Lower-quality notes, such as those considered “sub-prime” are more likely to default than those considered “prime” by a rating evaluation agency or service provider. An economic downturn or period of rising interest rates could adversely affect the market for sub-prime notes and reduce the Fund’s ability to sell these securities. The lack of a liquid market for these securities could decrease the Fund’s share price. Additionally, borrowers may seek bankruptcy protection which would delay resolution of security holder claims and may eliminate or materially reduce liquidity.

Municipal Bond Risk. The value of municipal bonds that depend on a specific revenue source or general revenue source to fund their payment obligations may fluctuate as a result of changes in the cash flows generated by the revenue source(s) or changes in the priority of the municipal obligation to receive the cash flows generated by the revenue source(s). In addition, changes in federal tax laws or the activity of an issuer may adversely affect the tax-exempt status of municipal bonds. Investments in inverse floating rate securities typically involve greater risk than investments in municipal bonds of comparable maturity and credit quality and their values are more volatile than municipal bonds due to the leverage they entail.

Over-the-Counter (“OTC”) Trading Risk. Certain of the derivatives in which the Fund may invest may be traded (and privately negotiated) in the OTC market. While the OTC derivatives market is the primary trading venue for many derivatives, it is largely unregulated. As a result and similar to other privately negotiated contracts, the Fund is subject to counterparty credit risk with respect to such derivative contracts.

Preferred Stock Risk. The value of preferred stocks will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of preferred stock. Preferred stocks are also subject to credit risk, which is the possibility that an issuer of preferred stock will fail to make its dividend payments. Preferred stock prices tend to move more slowly upwards than common stock prices. In an issuer bankruptcy, preferred stockholders are subordinate to the claims of debtholders and may receive little or no recovery.

Prepayment Risk. The Fund may invest in debt securities that may be paid off early when the issuer of a debt security can repay the principal prior to a security’s maturity. If interest rates are falling, the Fund may have to reinvest the unanticipated proceeds at lower interest rates, resulting in a decline in the Fund’s income.

Real Estate and REIT Risk. The Fund is subject to the risks of the real estate market as a whole, such as taxation, regulations and economic and political factors that negatively impact the real estate market and the direct ownership of real estate. These may include decreases in real estate values, overbuilding, rising operating costs, interest rates and property taxes. In addition, some real estate related investments are not fully diversified and are subject to the risks associated with financing a limited number of projects.

Investing in REITs involves certain unique risks in addition to those associated with the real estate sector generally. REITs whose underlying properties are concentrated in a particular industry or region are also subject to risks affecting such industries and regions. REITs (especially mortgage REITs) are also subject to interest rate risks. By investing in REITs through the Fund, a shareholder will bear expenses of the REITs in addition to Fund expenses. An entity that fails to qualify as a REIT would be subject to a corporate level tax, would not be entitled to a deduction for dividends paid to its shareholders and would not pass through to its shareholders the character of income earned by the entity.

Repurchase and Reverse Repurchase Agreements Risk. The Fund may enter into repurchase agreements in which it purchases a security (known as the “underlying security”) from a securities dealer or bank. In the event of a bankruptcy or other default by the seller of a repurchase agreement, the Fund could experience delays in liquidating the underlying security. The Fund may also experience losses in the event of a decline in the value of the underlying security while the Fund is seeking to enforce its rights under the repurchase agreement. Reverse repurchase agreements involve the sale of securities held by the Fund with an agreement to repurchase the securities at an agreed-upon price, date and interest payment, and involve the risk that (i) the other party may fail to return the

securities in a timely manner, or at all, and (ii) the market value of assets that are required to be repurchased decline below the purchase price of the asset that has to be sold, resulting in losses to the Fund.

Restricted Securities Risk. The Fund may hold securities that are restricted as to resale under the U.S. federal securities laws. There can be no assurance that a trading market will exist at any time for any particular restricted security. Limitations on the resale of these securities may prevent the Fund from disposing of them promptly at reasonable prices or at all. The Fund may have to bear the expense of registering the securities for resale and the risk of substantial delays in effecting the registration. Also, restricted securities may be difficult to value because market quotations may not be readily available, and the values of restricted securities may have significant volatility.

Risk Management Risk. The measures that the Advisor or portfolio manager use to monitor and manage the risks of the Fund may not accomplish the intended results and the Fund may experience losses significantly greater than expected.

Rule 144A Securities Risk. The Fund may invest in securities that are normally purchased or resold pursuant to Rule 144A under the Securities Act. Rule 144A securities are restricted securities that are not publicly traded and may be subject to legal restrictions on resale. Rule 144A securities are generally not traded on established markets that are typically less active than the market for publicly-traded securities. As a result, Rule 144A securities may be illiquid, difficult to value and subject to wide fluctuations in value. Delay or difficulty in selling such securities may result in a loss to the Fund.

Security Risk. The value of the Fund may decrease in response to the activities and financial prospects of an individual security in the Fund's portfolio. The net asset value of the Fund will fluctuate based on changes in the value of the securities in which the Fund invests. The Fund may invest in securities that may be more volatile and carry more risk than some other forms of investment. The price of securities may rise or fall because of economic or political changes. Security prices in general may decline over short or even extended periods of time. Market prices of securities in broad market segments may be adversely affected by a prominent issuer having experienced losses, lack of earnings, failure to meet the market's expectations with respect to new products or services, or even by factors wholly unrelated to the value or condition of the issuer, such as changes in interest rates.

Short Selling Risk. If a security or other instrument sold short increases in price, the Fund may have to cover its short position at a higher price than the short sale price, resulting in a loss. The Fund may have substantial short security positions and must borrow those securities to make delivery to the buyer. The Fund may not be able to borrow a security that it needs to deliver or it may not be able to close out a short position at an acceptable price and may have to sell related long positions before it had intended to do so. Thus, the Fund may not be able to successfully implement its short sale strategy due to limited availability of desired securities or for other reasons.

The Fund also may be required to pay a commission and other transaction costs, which would increase the cost of the security sold short. The amount of any gain will be decreased, and the amount of any loss increased, by the amount of the commission, dividends, interest or expenses the Fund may be required to pay in connection with the short sale.

Until the Fund replaces a borrowed security, it is required to maintain a segregated account of cash or liquid assets with a broker or custodian to cover the Fund's short position. Generally, securities held in a segregated account cannot be sold unless they are replaced with other liquid assets. The Fund's ability to access the pledged collateral may also be impaired in the event the broker fails to comply with the terms of the contract. In such instances the Fund may not be able to substitute or sell the pledged collateral. Additionally, the Fund must maintain sufficient liquid assets (less any additional collateral pledged to the broker), marked-to-market daily, to cover the short sale obligations. This may limit the Fund's investment flexibility and may cause the Fund to miss favorable trading opportunities due to a lack of sufficient cash or readily marketable securities. This may also affect the Fund's ability

to meet redemption requests or other current obligations. This requirement may also cause the Fund to realize losses on offsetting or terminated derivative contracts or special transactions.

Because losses on short sales arise from increases in the value of the security sold short, such losses are theoretically unlimited. By contrast, a loss on a long position arises from decreases in the value of the security and is limited by the fact that a security's value cannot go below zero.

Sovereign Debt Risk. The issuer of foreign debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or interest when due, and the Fund may have limited recourse in the event of a default. The market prices of sovereign debt, and the Fund's net asset value, may be more volatile than prices of U.S. debt obligations and certain emerging markets may encounter difficulties in servicing their debt obligations.

Structured Note Risk. The Fund may seek investment exposure to sectors through structured notes that may be exchange traded or may trade in the over the counter market. These notes are typically issued by banks or brokerage firms, and have interest and/or principal payments which are linked to changes in the price level of certain assets or to the price performance of certain indices. The value of a structured note will be influenced by time to maturity, level of supply and demand for this type of note, interest rate and market volatility, changes in the issuer's credit quality rating, and economic, legal, political, events that affect the industry, and adverse changes in the index or reference asset to which the payments are linked. In addition, there may be a lag between a change in the value of the underlying reference asset and the value of the structured note. Structured notes may also be subject to counterparty risk. The Fund may also be exposed to increased transaction costs when it seeks to sell such notes in the secondary market.

Sub-Prime Mortgage Risk. Lower-quality notes, such as those considered "sub-prime" are more likely to default than those considered "prime" by a rating evaluation agency or service provider. An economic downturn or period of rising interest rates could adversely affect the market for sub-prime notes and reduce the Fund's ability to sell these securities. The lack of a liquid market for these securities could decrease the Fund's share price. Additionally, borrowers may seek bankruptcy protection which would delay resolution of security holder claims and may eliminate or materially reduce liquidity.

Underlying Fund Risk. Other investment companies including mutual funds, ETFs and closed-end funds ("Underlying Funds") in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the Underlying Funds and may be higher than other mutual funds that invest directly in stocks and bonds. In addition, when the Fund invests in Underlying Funds, there is a risk that the investment advisers of those Underlying Funds may make investment decisions that are detrimental to the performance of the Fund. Each of the Underlying Funds is subject to its own specific risks. Additional risks of investing in the Underlying Funds are described below:

- *BDC Risk.* BDCs may carry risks similar to those of a private equity or venture capital fund. BDC company securities are not redeemable at the option of the shareholder and they may trade in the market at a discount to their net asset value. A BDC is a form of investment company that is required to invest at least 70% of its total assets in securities (typically debt) of private companies, thinly traded U.S. public companies, or short-term high quality debt securities. The BDCs held by the Fund may leverage their portfolios through borrowings or the issuance of preferred stock. While leverage often serves to increase the yield of a BDC, this leverage also subjects a BDC to increased risks, including the likelihood of increased volatility and the possibility that a BDC's common share income will fall if the dividend rate of the preferred shares or the interest rate on any borrowings rises. A significant portion of a BDC's investments are recorded at fair value as determined by its board of directors which may create uncertainty as to the value of the BDC's investments. Non-traded BDCs are illiquid and it may not be possible to redeem shares without paying a

substantial penalty or at all. Publicly-traded BDCs usually trade at a discount to their net asset value because they invest in unlisted securities and have limited access to capital markets. BDCs are subject to high failure rates among the companies in which they invest and federal securities laws impose restraints upon the organization and operations of BDCs that can limit or negatively impact the performance of a BDC. However, the Fund does not believe it would be liable for the actions of any entity in which it invests and that only its investment is at risk. Also, BDCs may engage in certain principal and joint transactions that a mutual fund or closed-end fund may not without an exemptive order from the SEC.

- *Closed-End Fund Risk.* Closed-end funds are subject to management risk because the adviser to the underlying closed-end fund may be unsuccessful in meeting the fund's investment objective. Closed-end funds may trade at a discount or premium to their net asset value and may trade at a larger discount or smaller premium subsequent to purchase by the Fund. Since closed-end funds trade on exchanges, the Fund will also incur brokerage expenses and commissions when it buys or sells closed-end fund shares.

- *ETF Risk.* Like a mutual fund, the value of an ETF can fluctuate based on the prices of the securities owned by the ETF, and ETFs are also subject to the following additional risks: (i) the ETF's market price may be less than its net asset value; (ii) an active market for the ETF may not develop or be maintained; and (iii) market trading in the ETF may be halted under certain circumstances.

- *ETF Tracking Risk.* Index-based or "passive" ETFs, which seek to track the performance of an underlying index, will not be able to replicate exactly the performance of the indices they track because the total return generated by the securities will be reduced by transaction costs incurred in adjusting the actual balance of the securities. In addition, passive ETFs will incur expenses not incurred by their applicable indices. Certain securities comprising the indices tracked by the passive ETFs may, from time to time, temporarily be unavailable, which may further impede the ETFs' ability to track their applicable indices.

- *Inverse Correlation Risk.* Underlying Funds that are inverse funds should lose value as the index or security tracked by such fund's benchmark increases in value; a result that is the opposite from traditional mutual funds. Successful use of inverse funds requires that the fund's adviser correctly predict short term market movements. If the Fund invests in an inverse fund and markets rise, the Fund could lose money. Inverse funds may also employ leverage such that their returns are more than one times that of their benchmark.

- *Inverse ETF and ETN Risk.* Investing in inverse ETFs and ETNs may result in increased volatility due to the ETF's or ETN's possible use of short sales of securities and derivatives such as options and futures. The use of leverage by an ETF or ETN increases risk to the Fund. The more the Fund invests in leveraged instruments, the more the leverage will magnify any gains or losses on those investments. During periods of increased volatility, inverse ETFs and ETNs may not perform in the manner they are designed.

- *Mutual Fund Risk.* Mutual funds are subject to management risk because the adviser to the mutual fund may be unsuccessful in meeting the fund's investment objective and may temporarily pursue strategies which are inconsistent with the investment objective of the Fund.

- *Leveraged ETF Risk.* Leveraged ETFs will amplify losses because they are designed to produce returns that are a multiple of the index to which they are linked. Most leveraged ETFs "reset" daily. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance of their underlying index or benchmark during the same period of time.

- *Strategies Risk.* Each Underlying Fund is subject to specific risks, depending on the nature of the fund. These risks could include liquidity risk, sector risk, and foreign currency risk, as well as risks associated with fixed income securities and commodities.

U.S. Government Obligations Risk. U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. government and generally have negligible credit risk. However, due to fluctuations in interest rates, the market value of such securities may vary during the period shareholders own shares of the Fund. Securities issued or guaranteed by federal agencies or authorities and U.S. government-sponsored instrumentalities or enterprises may not be backed by the full faith and credit of the U.S. government, which could affect the Fund’s ability to recover should they default. No assurance can be given that the U.S. government will provide financial support to its agencies and authorities if it is not obligated by law to do so.

Volatility Risk. The Fund may have investments that appreciate or decrease significantly in value of short periods of time. This may cause the Fund’s net asset value and market price per share to experience significant increases or declines in value over short periods of time, however, all investments long- or short-term are subject to risk of loss.

Exclusion of Advisor from Commodity Pool Operator Definition

The Advisor has claimed an exclusion from the definition of commodity pool operator (“CPO”) under the Commodity Exchange Act (the “CEA”) and the rules of the CFTC and, therefore, is not subject to CFTC registration or regulation as a CPO. In addition, the Advisor is relying upon a related exclusion from the definition of commodity trading adviser under the CEA and the rules of the CFTC. The terms of the CPO exclusion require the Fund, among other things, to adhere to certain limits on its investments in commodity futures, commodity options and swaps, which in turn include non-deliverable currency forward contracts, as further described in the Fund’s SAI. Because the Advisor and the Fund intend to comply with the terms of the CPO exclusion, the Fund may, in the future, need to adjust its investment strategies, consistent with its investment objective, to limit its investments in these types of instruments. The Fund is not intended as a vehicle for trading in the commodity futures, commodity options, or swaps markets. The CFTC has neither reviewed nor approved the Advisor’s reliance on these exclusions, or the Fund, its investment strategies or this prospectus.

SHAREHOLDER INFORMATION

Purchasing and Selling Fund Shares on the Secondary Market

General. Most investors will buy and sell shares of the Fund in secondary market transactions through their financial institution. Shares of the Fund will be listed for trading in the secondary market on the Exchange. The Exchange is currently open for business each day other than weekends and the following national holidays: New Year’s Day, Martin Luther King Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

The Fund’s shares trade on the Exchange under the following symbol:

<u>Fund</u>	<u>Symbol</u>
Strategy Shares Halt Climate Change ETF	NZRO

Shares of the Fund can be bought and sold throughout the trading day at their market price like other publicly traded equity securities. If you purchase shares of the Fund in the secondary market, there is no minimum investment. While shares of the Fund will typically be purchased and sold in the secondary market in “round lots” of 100 shares, your financial institution may permit you to purchase or sell shares in smaller “odd-lots” at no per-share price differential. When purchasing or selling Fund shares through your financial institution, you will pay customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and offer price in the secondary market.

The market price of Fund shares may be below (a discount), at, or above (a premium) their most recently calculated NAV and can be affected by market forces of supply and demand for the Fund's shares, the prices of the Fund's portfolio securities, economic conditions and other factors.

Purchasing Shares from and Redeeming Shares with the Fund

General. On each Business Day, you may purchase shares directly from the Fund, and you may tender shares for redemption directly to the Fund in a Creation Unit or multiples thereof. Each Creation Unit is currently comprised of 25,000 shares. The number of shares comprising a Creation Unit may change over time. Once "created," shares of the Fund will generally trade in the secondary market in amounts less than a Creation Unit (see "Shareholder Information – Purchasing and Selling Fund Shares on the Secondary Market").

To purchase or redeem Creation Units of the Fund, you must be an Authorized Participant or you must purchase or redeem the shares through a financial institution that is an Authorized Participant. The Distributor will provide a list of Authorized Participants upon request.

The Fund processes orders for the purchase and redemption of Creation Units at the NAV next calculated after an order has been received in proper form by the Distributor.

Except where the purchase or redemption will include cash under certain circumstances, investors will generally be required to purchase Creation Units by making an in-kind deposit of specified instruments ("Deposit Instruments"), and shareholders redeeming Creation Units will generally receive an in-kind transfer of specified instruments ("Redemption Instruments"). The name and quantities of the instruments that constitute the Fund's Deposit Instruments and the names and quantities of the instruments that constitute the Fund's Redemption Instruments will be specified by the Fund each day, and these instruments are referred to, in the case of either a purchase or a redemption, as the "Creation Basket." If there is a difference between the net asset value attributable to a Creation Unit and the aggregate market value of the Creation Basket exchanged for the Creation Unit, the party conveying instruments with the lower value will also pay to the other an amount in cash equal to that difference.

The Fund generally does not offer or sell its shares outside of the U.S. Also, the Fund reserves the right to reject any purchase request at any time, for any reason, and without notice.

Additional information regarding the purchase and redemption of the Fund's Creation Units may be found in the "Purchase and Redemption of Creation Units" section of the SAI.

Continuous Offering. Because new shares may be created and issued on an ongoing basis during the life of the Fund, a "distribution," as such term is used in the Securities Act may be occurring. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner that could render them statutory underwriters and subject to the prospectus delivery and liability provisions of the 1933 Act. Any determination of whether one is an underwriter must take into account all the relevant facts and circumstances of each particular case.

Broker-dealers should also note that dealers who are not "underwriters" but are participating in a distribution (as compared to ordinary secondary market transactions), and thus dealing with shares that are part of an "unsold allotment" within the meaning of Section 4(3)(C) of the 1933 Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the 1933 Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the 1933 Act is available only with respect to transactions on a national securities exchange.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The DTC, or its nominee, will be the record owner or registered owner of all outstanding shares of the Fund and is recognized as the owner of all such shares. Your beneficial interest in the shares of the Fund will be reflected on the records of the DTC or its participants. Participants in the DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with the DTC. As a beneficial owner of shares of the Fund, you are not entitled to receive physical delivery of stock certificates or to have shares of any Fund registered in your name, and you are not considered a registered owner of those shares. Therefore, to exercise any right as an owner of Fund shares, you must rely on the procedures of the DTC and its participants. These procedures are the same as those that apply to any other stocks that you hold in book entry or “street name” form through your financial institution.

Calculation of Net Asset Value

The Fund’s NAV is determined by dividing the total value of the Fund’s portfolio investments and other assets, less any liabilities, by the total number of shares outstanding as of the close of regular trading on the Exchange (normally 4:00 p.m., Eastern Time) on each day that the Exchange is open for business. Since the Fund may invest a portion of its investment portfolio in foreign securities that trade on weekends or other days that the Fund does not price its shares, the NAV of the Fund may change on days when shareholders will not be able to purchase or redeem Creation Units.

In computing the NAV for the Fund, current market value is used to value portfolio securities with respect to which market quotations are readily available, except short-term investments with remaining maturities of 60 days or less which are valued at amortized cost. Pursuant to Board-approved policies, the Fund relies on certain security pricing services to provide current market value of securities.

Securities for which market quotations are not readily available are valued at their “fair value” pursuant to Board-approved procedures. Market quotations may not be readily available if: (1) a portfolio security is not traded in a public market or the principal market in which the security trades are closed; (2) trading in a portfolio security is suspended and not resumed prior to the normal market close; (3) a portfolio security is not traded in significant volume for a substantial period; (4) the value of a portfolio security has been materially affected by events occurring after the close of the market on which the security is principally traded; or (5) the Advisor determines that the quotation or price for a portfolio security provided by an independent pricing source is inaccurate. The securities of smaller companies in which the Fund may invest may be susceptible to fair valuation since these securities may be thinly traded and less liquid than their larger counterparts. Similarly, the Fund’s investments in foreign securities, if any, are more likely to require a fair value determination because, among other things, events may occur between the closure of the foreign market and the time that the Fund calculates its NAV that affect the reported market value of these securities.

There can be no assurance that the Fund could purchase or sell a portfolio security at the price used to calculate the Fund’s NAV. In the case of fair valued portfolio securities, lack of information and uncertainty as to the significance of information may lead to a conclusion that a prior valuation is the best indication of a portfolio security’s present value. Fair valuations generally remain unchanged until new information becomes available. Consequently, changes in the fair valuation of portfolio securities may be less frequent and of greater magnitude than changes in the price of portfolio securities valued at their last sale price by an independent pricing service, or based on market quotations. Fair valuation determinations often involve the consideration of a number of subjective factors, and the fair value price may be higher or lower than a readily available market quotation.

Frequent Purchases and Sales of Fund Shares

The Board has not adopted policies and procedures with respect to frequent purchases and sales of Fund shares. Frequent purchases and sales of the Fund's shares in the secondary market are not expected to subject the Fund to the harmful effects of market timing and excessive trading such as dilution, the disruption of portfolio management, an increase in portfolio trading costs, and/or the realization of capital gains since these transactions do not involve the Fund directly. It is not anticipated that these effects will materialize as a result of the issuance and redemption of Creation Units by the Fund since these transactions will generally be processed on an in-kind basis (that is for a basket of portfolio securities and not for cash). Transaction fees will be imposed on purchases and redemptions of Creation Units, which are intended to offset custodial and other costs to the Fund incurred in processing the transactions in-kind. To the extent that the Fund permits the purchase or redemption of Creation Units in part or wholly in cash, higher transaction fees will be imposed, which are intended to offset the Fund's increased trading costs to purchase or redeem portfolio securities in connection these transactions.

Portfolio Holdings Information

A description of the Fund's policies and procedures with respect to the disclosure of portfolio securities is available in the SAI.

DISTRIBUTION OF THE FUND

The Fund has adopted but has yet to implement a Rule 12b-1 Distribution Plan ("Plan"), pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, the Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No 12b-1 fees are currently paid by the Fund, and there are no plans to impose these fees. However, in the event 12b-1 fees are charged in the future, because the fees are paid out of the Fund's assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

Additional Payments to Financial Intermediaries

The Advisor and its affiliates may pay, out of their own profits and reasonable resources, amounts (including items of material value) to certain financial intermediaries for the sale of Fund shares or related services. The amounts of these payments could be significant, and may create an incentive for the financial intermediaries or their employees or associated persons to recommend or sell Fund shares to you. These payments are not reflected in the fees and expenses listed in the fee table section of this Prospectus because they are not paid by the Fund.

These payments are negotiated and may be based on such factors as the number or value of Fund shares that the financial intermediary sells or may sell; the value of client assets invested; or the type and nature of services or support furnished by the financial intermediary. These payments may be in addition to payments made by any Fund to a financial intermediary under the Plan, if implemented. Ask your financial intermediary for information about any payments it receives from the Advisor, their affiliates, or the Fund and any services the financial intermediary provides to the Fund. The SAI contains additional information on the types of additional payments that may be paid.

MANAGEMENT OF THE FUND

Investment Advisor

Rational Advisors, Inc., a wholly owned subsidiary of Rational Capital LLC, has been retained by the Trust under a Management Agreement to act as the investment advisor to the Fund subject to the authority of the Board of

Trustees. Management of mutual funds is currently its primary business. The Advisor is under common control with Catalyst Capital Advisors, LLC (“Catalyst”) and AlphaCentric Advisors LLC, the investment advisors of other funds in the same group of investment companies also known as a “Fund Complex.” Information regarding the funds in the Fund Complex can be found at <http://intelligentalts.com>. The Advisor oversees the day-to-day investment decisions for the Fund and continuously reviews, supervises and administers the Fund’s investment program. The address of the Advisor is 53 Palmeras St., Suite 601, San Juan, PR 00901.

A discussion of the Trustees’ review and approval of the Advisor’s investment advisory agreement with the Trust will be available in the Fund’s first annual or semi-annual report to shareholders.

Portfolio Managers

David Miller, Charles Ashley, and Robert Gough are jointly and primarily responsible for the day-to-day management of the Fund. Mr. Miller is the Lead Portfolio Manager of the Fund.

David Miller, Owner and Senior Portfolio Manager of the Advisor since 2016, has served as a Portfolio Manager of the Fund since 2022. He is the Chief Investment Officer of the Advisor and Catalyst Capital Advisors LLC (“Catalyst”), an affiliate of the Advisor, since 2016 and 2006, respectively. He co-founded Catalyst in 2006 and is responsible for the day-to-day management of several funds managed by Catalyst. Mr. Miller is also a member of Catalyst International Advisors LLC since 2019, Insights Media LLC since 2019, and Catalyst Insurance Corporation II since 2018. He received a BS in Economics from the University of Pennsylvania, Wharton School and a MBA in Finance from the University of Michigan, Ross School of Business.

Charles Ashley, Portfolio Manager of the Advisor since 2019 and Catalyst since November 2017, has served as a Portfolio Manager of the Fund since 2022. Mr. Ashley joined Rational in February 2016 as a senior analyst to provide investment research and assist with the day-to-day management of several mutual funds. Prior to joining the Advisor, he was the Executive Vice President of Absocold Corporation, a privately held white goods manufacturer, since 2013. From 2006 to 2013, he served in various sales and management roles with Absocold Corporation. His previous experience also includes equity sales and equity research at BMO Capital Markets in 2012. Mr. Ashley has an MBA from the University of Michigan Ross School of Business and a B.A. from the Michigan State University Eli Broad College of Business.

Robert Gough, Portfolio Manager of the Advisor since 2022, has served as a Portfolio Manager of the Fund since 2022. Since 2020, Mr. Gough has been the Principal of Bor Yam LLC, a consulting firm. From 2017 to 2020, he was the Chief Executive Officer of DOPE, a casual apparel company. From 2014 to 2015, he was involved with the business development of Quotient Technology, a digital media and promotions technology company. From 2012 to 2014, he was the co-founder and President of Eckim, a Rakuten LinkShare Advertisers Award-winning online marketing company. From 2010 to 2013, Mr. Gough was the main investor and advisor of Community Recycling Solutions, a recycling business. From 2007 to 2012, he was employed by Finish Line, a retailer of athletic apparel. Mr. Gough received the Indiana Governor’s Award for Tomorrow’s Leaders in 2009. He graduated from the Indiana University, Kelley School of Business with a Bachelors in Marketing and Distribution Management, with a minor in Economics.

The SAI provides additional information about the portfolio managers’ compensation, management of other accounts, and ownership of securities in the Fund.

Manager-of-Managers Order

An affiliate of the Advisor has received an exemptive order (the “Order”) from the SEC that permits the Advisor, with the Trust’s Board of Trustees’ approval, to enter into or materially amend sub-advisory agreements with one

or more sub-advisers who are not affiliated with the Advisor without obtaining shareholder approval. Shareholders will be notified if and when a new sub-adviser is employed by the Advisor within 90 days of such change.

Fees Paid to Advisor

As full compensation for its services to the Fund, the Advisor receives monthly compensation from the Fund at the annual rate of 0.95% of the Fund's average daily net assets. In consideration of the fees paid with respect to the Fund, the Adviser has agreed to pay all routine expenses of the Fund (including, without limitation, transfer agent fees, administrative fees and expenses, custodian fees, legal fees, accounting fees, any other expenses (including clerical expenses) of issue, sale, repurchase or redemption of shares, expenses of registering or qualifying shares for sale, transfer taxes, all expenses of preparing the Trust's registration statement and prospectus for the Fund, and the cost of printing and delivering to shareholders prospectuses and reports), except the Fund's management fee; taxes; brokerage commissions and trading costs; interest expense (including borrowing costs and overdraft charges); short sale dividends and interest expenses; acquired fund fees and expenses; and non-routine or extraordinary expenses of the Fund (such as litigation or reorganizational costs), each of which is paid by the Fund.

DIVIDENDS AND DISTRIBUTIONS

Distributions. The Fund does not offer a dividend reinvestment service to facilitate the reinvestment of distributions into additional Fund shares. The Fund intends to declare and dividends on investment income, if any, annually. The Fund also intends to make distributions of net capital gains, if any, at least annually. Dividends and capital gains distributions will be paid in cash.

Dividend Reinvestment Services. If you hold Fund shares through a broker that offers a dividend reinvestment service, you may elect to reinvest dividends and capital gains distributed by the Fund in additional shares of that Fund. Contact your broker to determine whether a reinvestment service is available and to discuss any related charges associated with the use of the reinvestment service.

As with all ETFs, reinvestment of dividend and capital gains distributions in additional shares of the Fund will occur after the ex-dividend date (the date when a distribution of dividends or capital gains is deducted from the price of the Fund's shares). The exact number of days depends on your broker. During that time, the amount of your distribution will not be invested in the Fund and therefore will not share in the Fund's income, gains, and losses. A shareholder will have an adjusted basis in the additional shares of the Fund acquired through a reinvest service equal to the amount of the reinvested distribution and the holding for the new shares shall commence on the day after such shares are credited to the shareholder's account.

TAX CONSEQUENCES

There are many important tax consequences associated with investment in the Fund offered by this Prospectus. The following is a brief summary of certain federal income tax consequences relating to an investment in the Fund. It is not a substitute for personal tax advice. You may also be subject to state and local tax on the Fund's distributions and the sale of Fund shares. Consult your personal tax adviser about the potential tax consequences of your investment in the Fund under all applicable tax laws. For more information, please see the SAI section "Taxes."

Taxation of Distributions. The Fund is treated as a separate entity for Federal tax purposes. The Fund intends to qualify as a "regulated investment company" ("RIC") for U.S. federal income tax purposes. If the Fund qualifies as a RIC, and satisfies certain distribution requirements, it will not be required to pay U.S. federal income taxes on income and gains it distributes to its shareholders.

The Fund intends to distribute substantially all of its net investment income (including net realized capital gains and tax-exempt interest income, if any) to its shareholders at least annually. Generally, distributions are subject to

federal income tax for the year in which they are paid. Distributions paid in January but declared by the Fund in October, November or December of the previous year may be taxable to shareholders in the previous year.

Generally, you are required to pay federal income tax on any dividends and other distributions, including capital gains distributions received, that are paid from the Fund's current and accumulated earnings and profits. This applies whether dividends and other distributions are received in cash or as additional shares. Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in the Shares and as capital gain thereafter. A written statement will accompany any such distribution informing you that the distribution is a return of capital. If you hold Fund shares in a tax-qualified retirement account, you generally will not be subject to federal taxation on Fund distributions until you begin receiving distributions from your retirement account.

Distributions paid out of the Fund's income and net short-term gains, if any, are taxable as ordinary income or qualified dividend income. Distributions representing long-term capital gains, if any, will be taxable to you as long-term capital gains no matter how long you have held the shares. Distributions are taxable to you even if they are paid from income or gains earned by the Fund before your investment (and thus were included in the price paid).

Individuals, trusts and estates whose income exceeds certain threshold amounts will be subject to a 3.8% Medicare contribution tax on "net investment income." Net investment income includes any ordinary dividends and capital gain distributions from the Fund as well as any capital gains recognized on the sale or exchange of Fund shares.

Distributions of investment income designated by the Fund as derived from "qualified dividend income" (income from taxable domestic corporations and certain qualified corporations) will be taxed at the rate applicable to long-term capital gains, provided holding period and other requirements are met at both the shareholder and Fund level. Long-term capital gain distributions paid to certain high-income taxpayers are subject to a regular tax rate of 20%. High income taxpayers, for this purpose, are defined as individuals and married couples filing jointly whose taxable income exceeds \$441,450 and \$496,600, respectively, per year.

Foreign Securities. The Fund may be subject to foreign withholding taxes on income it earns from investing in foreign securities which may reduce the return on such investments.

Backup Withholding. If you fail to furnish the Fund with your correct and certified Social Security or Taxpayer Identification Number, the Fund may be required to withhold federal income tax (backup withholding) from dividends, capital gain distributions and redemptions. You are urged to read the additional information concerning withholding provided in the SAI.

Non-U.S. Investors. If you are not a citizen or permanent resident of the U.S., the Fund's ordinary income dividends will generally be subject to a 30% U.S. withholding tax, unless a lower treaty rate applies or such income is effectively connected with a U.S. trade or business. The Fund may, under certain circumstances, designate all or a portion of a dividend as an "interest-related dividend" that if received by a nonresident alien or foreign entity generally would be exempt from the 30% U.S. withholding tax, provided that certain other requirements are met. The Fund may also, under certain circumstances, designate all or a portion of a dividend as a "short-term capital gain dividend" which if received by a nonresident alien or foreign entity generally would be exempt from the 30% U.S. withholding tax, unless the foreign person is a nonresident alien individual present in the U.S. for a period or periods aggregating 183 days or more during the taxable year.

Taxes on Exchange-Listed Sales and Cash Redemptions of Creation Units. You will recognize a taxable gain or loss upon the sale of the Fund's shares in the secondary market and upon the cash redemption of the Fund's Creation Unit. Currently, any capital gain or loss realized from the sale of the Fund's shares for cash will generally be treated as long-term capital gain or loss if those shares have been held for more than one year and as short-term capital gain or loss if those shares have been held for one year or less. Any capital loss arising from the sale or

disposition of the Fund's shares held for six months or less will be treated as long-term capital loss to the extent of the amount of capital gain dividends received or undistributed capital gain deemed received with respect to the shares. All or a portion of any loss recognized upon the disposition of the Fund's shares may be disallowed under "wash sale" rules if other shares of the Fund are purchased (whether through reinvestment of distributions or otherwise) within 30 days before or after the disposition. If disallowed, the loss will be reflected in an adjustment to the basis of the shares that you acquired.

Taxes on In-Kind Purchases and Redemptions of Creation Units. An Authorized Participant who exchanges securities or securities and cash for a Creation Unit will generally recognize a gain or loss equal to the difference between the market value of the Creation Unit at the time of purchase (plus any cash received by the Authorized Participant as part of the issue) and the exchanger's aggregate basis in the securities surrendered and the amount of any cash paid for the Creation Unit. An Authorized Participant who exchanges a Creation Unit for securities or securities and cash will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Unit (plus any cash paid by the Authorized Participant as part of the redemption) and the aggregate market value of the securities and cash received for the Creation Unit. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for a Creation Unit cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position. Persons exchanging securities should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible. Under current federal tax laws, any capital gain or loss realized upon redemption of a Creation Unit is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less. If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many Creation Units of the Fund you purchased and sold and at what price.

If the Fund redeems Creation Units in cash, it may recognize more capital gains than it will if it redeems Creation Units in-kind.

PREMIUM/DISCOUNT INFORMATION

The Fund's daily NAV, and information showing the number of days the market price of the Fund's shares was greater (at a premium) and less (at a discount) than the Fund's NAV for the most recently completed calendar year, and the most recently completed calendar quarters since that year (or the life of the Fund, if shorter), is available at www.strategysharesetfs.com.

More information about the Fund is available free, upon request, including the following:

Annual and Semi-Annual Reports

Additional information about the Fund's investments are available in the Fund's annual and semi-annual reports to shareholders upon issuance. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year.

Statement of Additional Information (SAI)

The SAI provides more detailed information about the Fund and its policies. A current SAI is on file with the SEC and is incorporated by reference into (considered a legal part of) this Prospectus.

Rational Advisors, Inc. is the Advisor to the Fund.

Foreside Fund Services, LLC is the Distributor.
